The Constant Dialogues On Architecture In Black And White:

The Constant Eduardo Catalano, 2000 **Formulations** Andrew Witt, 2022-01-11 An investigation of mathematics as it was drawn encoded imagined and interpreted by architects on the eve of digitization in the mid twentieth century In *Formulations* Andrew Witt examines the visual methodological and cultural intersections between architecture and mathematics The linkages Witt explores involve not the mystic transcendence of numbers invoked throughout architectural history but rather architecture's encounters with a range of calculational systems techniques that architects inventively retooled for design Witt offers a catalog of mid twentieth century practices of mathematical drawing and calculation in design that preceded and anticipated digitization as well as an account of the formal compendia that became a cultural currency shared between modern mathematicians and modern architects Witt presents a series of extensively illustrated biographies of method episodes that chart the myriad ways in which mathematics particularly the mathematical notion of modeling and drawing was spliced into the creative practice of design These include early drawing machines that mechanized curvature the incorporation of geometric maquettes theorems made flesh into the toolbox of design the virtualization of buildings and landscapes through surveyed triangulation and photogrammetry formal and functional topology stereoscopic drawing the economic implications of cubic matrices and a strange synthesis of the technological mineral and biological crystallographic design Trained in both architecture and mathematics Witt uses mathematics as a lens through which to understand the relationship between architecture and a much broader set of sciences and visual techniques Through an intercultural exchange with other disciplines he argues architecture adapted not only the shapes and surfaces of mathematics but also its values and epistemic ideals **Latin American Architecture, 1929-1960** Carlos Brillembourg, 2004 This volume documents the golden period of Latin American architecture that was inaugurated in September 1929 when Le Corbusier was invited to lecture in Argentina Uruguay and Brazil These countries were eager to apply and transform a European born modernism and within a few decades they captured international attention with an array of extraordinary buildings exemplified by the Ministry of Education and Health in Rio de Janeiro and the Brazilian pavilion at the 1939 New York World's Fair The contributors to this insightful collection of essays which grew out of a 2002 conference organized by the Museum of Modern Art in New York and the New School University offer contemporary reflections that underline the importance of reexamining this almost forgotten work in light of the contemporary crisis in global architectural production Each essay examines a particular aspect of the cultural transformation that took place in Brazil Uruguay Argentina Venezuela and Mexico Among the topics explored are the influence of Le Corbusier on the region the early work of Oscar Niemeyer the roots of Mexican modernism and its radical transformation in the work of Luis Barragán and the creative collaboration between Venezuelan architect Carlos Raul Villanueva and sculptor Alexander Calder **American Book Publishing Record**, 2001 □□□□□□: □□□ **I-IV** □□□□, 2006 *Encyclopedia of Twentieth*

Century Architecture R. Stephen Sennott, 2004 For more information including the introduction a full list of entries and contributors a generous selection of sample pages and more visit the Encyclopedia of 20th Century Architecture website Focusing on architecture from all regions of the world this three volume set profiles the twentieth century's vast chronicle of architectural achievements both within and well beyond the theoretical confines of modernism Unlike existing works this encyclopedia examines the complexities of rapidly changing global conditions that have dispersed modern architectural types movements styles and building practices across traditional geographic and cultural boundaries

Cartography in Postcolonial Fiction Selin Şencan, 2025-03-19 Space shapes identity in postcolonial fiction through contested geographies migration and spatial memory Cartography in Postcolonial Fiction examines how literary narratives engage with territorial belonging displacement and resistance Analyzing works by Salman Rushdie Chinua Achebe Zadie Smith Jhumpa Lahiri Bharati Mukherjee Tsitsi Dangarembga C L R James Patricia Grace Gabriel García Márquez Anita Desai and Chimamanda Ngozi Adichie this book explores how postcolonial authors from South Asia Africa the Caribbean and the Pacific reimagine space as both a site of control and liberation Drawing on literary cartography and spatial theory Selin Şencan investigates how colonial geographies persist in contemporary fiction shaping narratives across urban centers diasporic landscapes and Indigenous homelands By mapping these literary terrains this study reveals how fiction challenges reclaims and reconfigures space in a world shaped by colonial legacies

A History of Architectural Modelmaking in Britain David Lund, 2022-12-16 Architectural modelmakers have long carried out their work hidden behind the scenes of architectural design and in presenting a history of architectural modelmaking in Britain for the first time this book casts a new light on their remarkable skills and achievements By telling the story of the modelmakers who make architectural models rather than architects who commission and use them this book seeks to celebrate their often overlooked contribution to the success and endurance of the architectural model in Britain over the past one hundred and forty years Drawing from extensive archival research and interviews with practicing and retired modelmakers this book traces the complete history of architectural modelmaking in Britain from its initial emergence as a specialist occupation at the end of the nineteenth century through to the present day It reveals the legacy of John Thorp the first professional architectural modelmaker in Britain who opened his business in London in 1883 and charts the lives and careers of the innovative and creative modelmakers who followed him It examines the continually evolving materials tools and processes of architectural modelmaking and outlines the profound ideological economic and technological influences that have shaped the profession's development Illustrated with over one hundred photographs of architectural models from previously undocumented archives this book will be of great interest to architectural modelmakers academics and historians as well as anyone with an interest in architectural history and modelmaking

A Different Kind of Black and White Prue Bramwell-Davis, 2016-03-08 Why should we continue to draw by hand when computers and photography can do it for us Freehand drawing is currently enjoying a widespread renaissance In

this path breaking study the act of drawing is explored as a way to foster epistemic development and wise thinking skills Drawing exposes the connecting processes of perception by which we make sense of the world creating and using systems of classification which ultimately create boundaries By exploring the relationships between metaphor the mental activity fundamental to language and the coordination of hand and eye essential for drawing such categories can be dissolved through the development of visual intelligence This book discusses approaches to epistemic development in relation to experiential learning citing students descriptions of their encounters with ways of knowing based on value judgments rather than the perceived safety of facts Chapters on prehistoric cave art and early medieval practices of the art of memory provide further insights into what it means to draw and what a drawing is A chapter on the history of engineering education discusses the narrowing effects of abstract and theoretical approaches to knowledge at the expense of practical skill and experience The study was developed in the setting of a postgraduate industrial design course for engineers at the Royal College of Art London but its concerns and recommendations including a wealth of teaching ideas apply wherever professional practitioners have to make judgments involving conflicting ideas Its insights hint at a deeper role for the university taking postgraduates beyond the narrow instrumentalist training agendas favoured by current government policies to a larger vision of the meaning of professional development California Arts & Architecture ,1929
