The Computer Revolution In Canada Building National Technological Competence:

The Computer Revolution in Canada John N. Vardalas, 2001-07-27 The forces that shaped Canada's digital innovations in the postwar period After World War II other major industrialized nations responded to the technological and industrial hegemony of the United States by developing their own design and manufacturing competence in digital electronic technology In this book John Vardalas describes the quest for such competence in Canada exploring the significant contributions of the civilian sector but emphasizing the role of the Canadian military in shaping radical technological change As he shows Canada's determination to be an active participant in research and development work on advanced weapons systems and in the testing of those weapons systems was a cornerstone of Canadian technological development during the years 1945-1980 Vardalas presents case studies of such firms as Ferranti Canada Sperry Gyroscope of Canada and Control Data of Canada In contrast to the standard nationalist interpretation of Canadian subsidiaries of transnational corporations as passive agents he shows them to have been remarkably innovative and explains how their aggressive programs to develop all Canadian digital R D and manufacturing capacities influenced technological development in the United States and in Great Britain While underlining the unprecedented role of the military in the creation of peacetime scientific and technical skills Vardalas also examines the role of government and university research programs including Canada's first computerized systems for mail sorting and airline reservations Overall he presents a nuanced account of how national economic political and corporate forces influenced the content extent and direction of digital innovation in Canada *Defence and Discovery* Andrew B. Godefroy, 2011-04-01 The Cold War space race between the United States and the Soviet Union is well documented but few are aware of Canada's early activities in this important arena of global power *Defence and Discovery* represents the first comprehensive investigation into the origins development and impact of Canada's space program from 1945 to 1974 Meticulously researched it demonstrates the central role of the military in Canada's early space research illuminating a significant yet understudied period in Canada's growth as a nation *The Computer Boys Take Over* Nathan L. Ensmenger, 2012-08-24 The contentious history of the computer programmers who developed the software that made the computer revolution possible This is a book about the computer revolution of the mid twentieth century and the people who made it possible Unlike most histories of computing it is not a book about machines inventors or entrepreneurs Instead it tells the story of the vast but largely anonymous legions of computer specialists programmers systems analysts and other software developers who transformed the electronic computer from a scientific curiosity into the defining technology of the modern era As the systems that they built became increasingly powerful and ubiquitous these specialists became the focus of a series of critiques of the social and organizational impact of electronic computing To many of their contemporaries it seemed the computer boys were taking over not just in the corporate setting but also in government politics and society in general In *The Computer Boys Take Over* Nathan Ensmenger traces the rise to power of the computer expert in modern

American society His rich and nuanced portrayal of the men and women a surprising number of the computer boys were in fact female who built their careers around the novel technology of electronic computing explores issues of power identity and expertise that have only become more significant in our increasingly computerized society In his recasting of the drama of the computer revolution through the eyes of its principle revolutionaries Ensmenger reminds us that the computerization of modern society was not an inevitable process driven by impersonal technological or economic imperatives but was rather a creative contentious and above all fundamentally human development

Programmed Inequality Mar Hicks,2018-02-23 This sobering tale of the real consequences of gender bias explores how Britain lost its early dominance in computing by systematically discriminating against its most qualified workers women Harvard Magazine In 1944 Britain led the world in electronic computing By 1974 the British computer industry was all but extinct What happened in the intervening thirty years holds lessons for all postindustrial superpowers As Britain struggled to use technology to retain its global power the nation's inability to manage its technical labor force hobbled its transition into the information age In *Programmed Inequality* Mar Hicks explores the story of labor feminization and gendered technocracy that undercut British efforts to computerize That failure sprang from the government's systematic neglect of its largest trained technical workforce simply because they were women Women were a hidden engine of growth in high technology from World War II to the 1960s As computing experienced a gender flip becoming male identified in the 1960s and 1970s labor problems grew into structural ones and gender discrimination caused the nation's largest computer user the civil service and sprawling public sector to make decisions that were disastrous for the British computer industry and the nation as a whole Drawing on recently opened government files personal interviews and the archives of major British computer companies *Programmed Inequality* takes aim at the fiction of technological meritocracy Hicks explains why even today possessing technical skill is not enough to ensure that women will rise to the top in science and technology fields *Programmed Inequality* shows how the disappearance of women from the field had grave macroeconomic consequences for Britain and why the United States risks repeating those errors in the twenty first century

Inventing the PC Zbigniew Stachniak,2011-05-10 *Inventing the PC* details the invention and design of the MCM 70 computer and the prolonged struggle to bring it to market Zbigniew Stachniak offers an insider's view of events on the front lines of pioneering work on personal computers He shows what information and options PC pioneers had how well they understood what they were doing and how that understanding or lack thereof shaped both their engineering ingenuity and the indecisiveness and over reaching ambition that would ultimately turn a very promising venture into a missed opportunity Providing comprehensive historical background and rich photographic documentation *Inventing the PC* tells the story of a Canadian company on the cutting edge of the information age

For Fun and Profit Christopher Tozzi,2024-04-09 The free and open source software movement from its origins in hacker culture through the development of GNU and Linux to its commercial use today In the 1980s there was a revolution with far reaching

consequences a revolution to restore software freedom In the early 1980s after decades of making source code available with programs most programmers ceased sharing code freely A band of revolutionaries self described hackers challenged this new norm by building operating systems with source code that could be freely shared In For Fun and Profit Christopher Tozzi offers an account of the free and open source software FOSS revolution from its origins as an obscure marginal effort by a small group of programmers to the widespread commercial use of open source software today Tozzi explains FOSS s historical trajectory shaped by eccentric personalities including Richard Stallman and Linus Torvalds and driven both by ideology and pragmatism by fun and profit Tozzi examines hacker culture and its influence on the Unix operating system the reaction to Unix s commercialization and the history of early Linux development He describes the commercial boom that followed when companies invested billions of dollars in products using FOSS operating systems the subsequent tensions within the FOSS movement and the battles with closed source software companies especially Microsoft that saw FOSS as a threat Finally Tozzi describes FOSS s current dominance in embedded computing mobile devices and the cloud as well as its cultural and intellectual influence

The Outsourcer Dinesh C. Sharma,2015-03-06 A history of how India became a major player in the global technology industry mapping technological economic and political transformations

Visions of a Digital Nation Jacob Ward,2024-02-06 Why the privatization of British Telecom signaled a pivotal moment in the rise of neoliberalism and how it was shaped by the longer development and digitalization of Britain s telecommunications infrastructure When Margaret Thatcher sold British Telecom for 3.6 billion in 1984 it became not only at the time the largest stock flotation in history but also a watershed moment in the rise of neoliberalism and deregulation In Visions of a Digital Nation Jacob Ward offers an incisive interdisciplinary perspective on how technology prefigured this pivot Giving due consideration to the politicians engineers and managers who paved the way for this historic moment Ward illustrates how the decision validated the privatization of public utilities and tied digital technology to free market rationales In this examination of the national and at times global history of technology Ward s approach is sweeping Utilizing infrastructure studies environmental history and urban and local history Ward explores Britain s nationalist and welfarist plans for a digital information utility and shows how these projects contested and adapted to the market turn under Margaret Thatcher Ultimately Visions of a Digital Nation compellingly argues that politicians did not impose neoliberalism top down but that technology engineers and managers shaped these politics from the bottom up

ENIAC in Action Thomas Haigh, Mark Priestley, Crispin Rope, 2016-06-24 The history of the first programmable electronic computer from its conception construction and use to its afterlife as a part of computing folklore Conceived in 1943 completed in 1945 and decommissioned in 1955 ENIAC the Electronic Numerical Integrator and Computer was the first general purpose programmable electronic computer But ENIAC was more than just a milestone on the road to the modern computer During its decade of operational life ENIAC calculated sines and cosines and tested for statistical outliers plotted the trajectories of bombs and shells and ran the first numerical weather simulations ENIAC in Action tells the whole story for the first time from ENIAC s design construction testing and use to its afterlife as part of computing folklore It highlights the complex relationship of ENIAC and its designers to the revolutionary approaches to computer architecture and coding first documented by John von Neumann in 1945 Within this broad sweep the authors emphasize the crucial but previously neglected years of 1947 to 1948 when ENIAC was reconfigured to run what the authors claim was the first modern computer program to be executed a simulation of atomic fission for Los Alamos researchers The authors view ENIAC from diverse perspectives as a machine of war as the first computer as a material artifact constantly remade by its users and as a subject of contradictory historical narratives They integrate the history of the machine and its applications describing the mathematicians scientists and engineers who proposed and designed ENIAC as well as the men and particularly the women who built programmed and operated it
