Tall Building Criteria and Loading

☐ BASIC CONSIDERATIONS

➤ 1.2.1 General

All buildings and structures shall be designed and constructed in conformance with the provisions of this section. The buildings and portions thereof shall support all loads including dead load specified in this chapter and elsewhere in this Code. Impact, fatigue and self-straining forces shall be considered where these forces occur.

➤ 1.2.2 Buildings and Structures

A structure shall ordinarily be described as an assemblage of framing members and components arranged to support both gravity and lateral forces. Structures may be classified as building and non-building structures. Structures that enclose a space and are used for various occupancies shall be called buildings or building structures. Structures other than buildings, such as water tanks, bridges, communication towers, chimneys etc. shall be called non-building structures. When used in conjunction with

Tall Building Criteria and Loading Leslie E. Robertson,Takeo Naka,1980-01-01 Prepared by the Council on Tall Buildings and Urban Habitat of ASCE This report examines the loads to which tall buildings are subjected so that engineers can precisely define the related structural elements that are necessary before translating a client s needs into a safe design The report explores five different classes of loads gravity loads and temperature affects earthquake loads wind loading and wind effects fire and accidental loads as well as quality control and overall safety considerations Steel buildings which hold the record for height tax the designer s ingenuity to provide adequate resistance to lateral loading Concrete buildings are both more numerous and widely distributed and for them vertical gravity loads may be the chief problem Both steel and concrete buildings and lateral and vertical loads are addressed Other subjects covered include dead live cyclic snow construction and combined loads code requirements meteorological and environmental factors in design firefighting provisions and modeling Contributions came from more than 800 contributors all international and professional and heavily representing design and industrial firms Condensed references follow each chapter and a glossary is included *Tall Building* Thomas C.

Kavanagh,1972 *Tall Building Criteria and Loading* Council on Tall Buildings and Urban Habitat,Leslie E. Robertson,1980 Examines different classes of loads to which tall buildings are subjected thereby aiming to give a precise definition of the related structural requirements that are necessary before a client s needs can be translated into a safe design This book also explores quality control and over all safety considerations and probabilistic methods **Tall Buildings and Urban Environment Series** ,19?? Guidelines for Design of Low-Rise Buildings Subjected to Lateral Forces Ajaya Kumar Gupta,Peter James Moss,2020-11-25 *Guidelines for Design of Low Rise Buildings Subjected to Lateral Forces* is a concise guide that identifies performance issues concerns and research needs associated with low rise buildings The book begins with an introduction that discusses special problems with low rise buildings subjected to wind and earthquakes Chapter 2 examines probabilistic methods and their use in evaluating risks from natural hazards It also addresses the characteristics of wind and seismic forces and levels of risk implied by building codes Wind forces are covered in more detail in Chapter 3 with discussions of wind force concepts and wind structure interactions Chapter 4 is devoted to earthquake forces and traces the development of building codes for earthquake resistant design Chapter 5 describes the main framing systems used to resist lateral forces and discusses the code requirements for drift control The designs and requirements for connections between building elements are addressed in Chapter 6 It includes examples along with several illustrations of suitable connections The performance of non structural elements during wind and earthquake forces is also examined in detail This book serves as an important reference for civil engineers construction engineers architects and anyone concerned with structural codes and standards It is an excellent guide that can be used to supplement design recommendations and provide a design basis where there are no

Wind Load Combinations on Tall Buildings by High-Frequency Force Balance and High-Frequency Pressure Integration Wasin Thangthong,Virote Boonyapinyo,Jirawat Junruang,2022-06-24 This paper presents the analysis of the modal correlation coefficient and the weighting factor for predicting wind load combination in tall buildings under wind loads by high frequency force balance HFFB and high frequency pressure integration HFPI in a wind tunnel The results of the analysis and comparisons in terms of non dimensional aerodynamic coefficients and base moments will be presented in this study to determine whether the pressure tap on the model surface for the HFPI test is sufficiently dense Results show good agreement between HFFB and HFPI for overall wind loads modal correlation coefficients and weighting factors Wind load combinations are revisited in the framework of modeling the resultant base moments in each direction According to the findings the across wind load combination by weighting factor is higher than the across wind load combination by AIJ 2004 standard for the along wind maximum case for buildings with an aspect ratio of 1 0 In other cases the combination of wind loads as determined by AIJ 2004 is greater than the combination of wind loads determined by the weighting factor

The Tall Buildings Reference Book David Parker,Antony Wood,2013-04-12 As the ever changing skylines of cities all over the world show tall buildings are an increasingly important solution to accommodating growth more sustainably in today s urban areas Whether it is residential a workplace or mixed use the tower is both a statement of intent and the defining image for the new global city The Tall Buildings Reference Book addresses all the issues of building tall from the procurement stage through the design and construction process to new technologies and the building s contribution to the urban habitat A case study section highlights the latest the most innovative the greenest and the most inspirational tall buildings being constructed today A team of over fifty experts in all aspects of building tall have contributed to the making of the Tall Buildings Reference Book creating an unparalleled source of information and inspiration for architects engineers and developers
