Singularity Theory and its Applications David Mond, James Montaldi, 2006-11-14 A workshop on Singularities Bifurcation and Dynamics was held at Warwick in July 1989 as part of a year long symposium on Singularity Theory and its applications The proceedings fall into two halves Volume I mainly on connections with algebraic geometry and volume II on connections with dynamical systems theory bifurcation theory and applications in the sciences The papers are original research stimulated by the symposium and workshops All have been refereed and none will appear elsewhere The main topic deformation theory is represented by several papers on descriptions of the bases of versal deformations and several more on descriptions of the generic fibres Other topics include stratifications and applications to differential geometry *Singularity Theory and its Applications* Mark Roberts, Ian Stewart, 2006-11-14 A workshop on Singularities Bifurcation and Dynamics was held at Warwick in July 1989 as part of a year long symposium on Singularity Theory and its applications The proceedings fall into two halves Volume I mainly on connections with algebraic geometry and volume II on connections with dynamical systems theory bifurcation theory and applications in the sciences The papers are original research stimulated by the symposium and workshop All have been refereed and none will appear elsewhere The main topic of volume II is new methods for the study of bifurcations in nonlinear dynamical systems and applications of these New Developments in Singularity Theory Dirk Wiersma, C.T.C. first time that so many people from the Russian school could be present at a conference in singularity theory outside Russia. This volume contains papers on singularity theory and its applications written by participants of the conference. In many cases they are extended versions of the talks presented there. The diversity of subjects of the contributions reflects singularity theory's relevance to topology, analysis, and geometry, combining ideas and techniques from all of these fields as well as demonstrating the breadth of Brieskorn's own interests. Seminaire de Probabilites XXVII Jaques Azema, Paul A. Meyer, Marc Yor, 2006-11-15. This volume represents a part of the main result obtained by a group of French probabilists together with the contributions of a number of colleagues mainly from the USA and Japan. All the papers present new results obtained during the academic year 1991-1992. The main themes of the papers are quantum probability (P. A. Meyer and S. Attal), stochastic calculus (M. Nagasawa, J. B. Walsh, F. Knight), to name a few, authors, fine properties of Brownian motion (Bertoin, Burdzy, Mountford), stochastic differential geometry (Arnaudon, Elworthy), quasi-sure analysis (Lescot, Song, Hirsch). Taken all together, the papers contained in this volume reflect the main directions of the most up-to-date research in probability theory. FROM THE CONTENTS: J. P. Ansal, C. Martin Golubitsky, Dan Luss, Steven H. Strogatz, 2012-12-06. This IMA Volume in Mathematics and its Applications, PATTERN FORMATION IN CONTINUOUS AND COUPLED SYSTEMS, is based on the proceedings of a workshop with the same title but goes beyond the proceedings by presenting a series of mini-review articles that survey and provide an introduction to interesting problems in the field. The workshop was an integral part of the 1997-98 IMA program on EMERGING APPLICATIONS OF DYNAMICAL SYSTEMS. I would like to thank Martin Golubitsky, University of Houston Mathematics, Dan Luss, University of Houston Chemical Engineering, and Steven H. Strogatz, Cornell University Theoretical and Applied Mechanics, for their excellent work as organizers of the meeting and for editing the proceedings. I also take this opportunity to thank the National Science Foundation (NSF) and the Army Research Office (ARO) whose financial support made the workshop

possible Willard Miller Jr Professor and Director v PREFACE Pattern formation has been studied intensively for most of this century by both experimentalists and theoreticians and there have been many workshops and conferences devoted to the subject In the IMA workshop on Pattern Formation in Continuous and Coupled Systems held May 11-15 1998 we attempted to focus on new directions in the patterns literature *Handbook of Geometry and Topology of Singularities III* José Luis Cisneros-Molina, Lê Dũng Tráng, José Seade, 2022-06-06 This is the third volume of the Handbook of Geometry and Topology of Singularities a series which aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research This volume consists of ten chapters which provide an in depth and reader friendly survey of various important aspects of singularity theory Some of these complement topics previously explored in volumes I and II such as for instance Zariski's equisingularity the interplay between isolated complex surface singularities and 3-manifold theory stratified Morse theory constructible sheaves the topology of the non critical levels of holomorphic functions and intersection cohomology Other chapters bring in new subjects such as the Thom-Mather theory for maps characteristic classes for singular varieties mixed Hodge structures residues in complex analytic varieties nearby and vanishing cycles and more Singularities are ubiquitous in mathematics and science in general Singularity theory interacts energetically with the rest of mathematics acting as a crucible where different types of mathematical problems interact surprising connections are born and simple questions lead to ideas which resonate in other parts of the subject and in other subjects Authored by world experts the various contributions deal with both classical material and modern developments covering a wide range of topics which are linked to each other in fundamental ways The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook
