Readings in Computer Vision Martin A. Fischler, Oscar Firschein, 2014-06-28 The field of computer vision combines techniques from physics mathematics psychology artificial intelligence and computer science to examine how machines might construct meaningful descriptions of their surrounding environment The editors of this volume prominent researchers and leaders of the SRI International AI Center Perception Group have selected sixty papers most published since 1980 with the viewpoint that computer vision is concerned with solving seven basic problems Reconstructing 3D scenes from 2D images Decomposing images into their component parts Recognizing and assigning labels to scene objects Deducing and describing relations among scene objects Determining the nature of computer architectures that can support the visual function Representing abstractions in the world of computer memory Matching stored descriptions to image representation Each chapter of this volume addresses one of these problems through an introductory discussion which identifies major ideas and summarizes approaches and through reprints of key research papers Two appendices on crucial assumptions in image interpretation and on parallel architectures for vision applications a glossary of technical terms and a comprehensive bibliography and index complete the volume

Kiowa Ethnogeography William C. Meadows, 2010-01-01 Examining the place names geographical knowledge and cultural associations of the Kiowa from the earliest recorded sources to the present *Kiowa Ethnogeography* is the most in depth study of its kind in the realm of Plains Indian tribal analysis Linking geography to political and social changes William Meadows applies a chronological approach that demonstrates a cultural evolution within the Kiowa community Preserved in both linguistic and cartographic forms the concepts of place homeland intertribal sharing of land religious practice and other aspects of Kiowa life are clarified in detail
