Vinegars of the World Laura Solieri, Paolo Giudici, 2009-08-29 Vinegars can be considered as acidic products of special importance for the enri ment of our diet and resulting from the desired or controlled oxidation of ethanol containing liquid substrates The traditional use and integration of vinegars in numerous cultures can be traced back to ancient times In fact the cultural heritage of virtually every civilization includes one or more vinegars made by the souring action of micro organisms following alcoholic fermentation It has been do mented that the Egyptians Sumerians and Babylonians had experience and tech cal knowledge in making vinegar from barley and any kind of fruit Vinegar was very popular both in ancient Greece and Rome where it was used in food prepa tions and as remedy against a great number of diseases In Asia the first records about vinegar date back to the Zhou Dynasty 1027 221 BC and probably China s ancient rice wines may have originally been derived from fruit for which malted rice was substituted later The historical and geographical success of vinegars is mainly due to the low technology required for their production and to the fact that several kinds of raw materials rich in sugars may easily be processed to give vinegar In addition vi gars are well known and accepted as safe and stable commodities that can be c sumed as beverages health drinks or added to food as preservatives or as flavo ing agents

*Kent's Technology of Cereals* N. L. Kent, 1994-01-01 This well established textbook provides students of food science with an authoritative and comprehensive study of cereal technology Kent compares the merits and limitations of

individual cereals as sources of food products as well as looking at the effects of processing treatments on the nutritive value of the products The fourth edition of this classic book has been thoroughly updated with new sections including extrusion cooking and the use of cereals for animal feed      **Nutrient Use Efficiency: from Basics to Advances** Amitava Rakshit, Harikesh Bahadur Singh, Avijit Sen, 2014-12-26 This book addresses in detail multifaceted approaches to boosting nutrient use efficiency NUE that are modified by plant interactions with environmental variables and combine physiological microbial biotechnological and agronomic aspects Conveying an in depth understanding of the topic will spark the development of new cultivars and strains to induce NUE coupled with best management practices that will immensely benefit agricultural systems safeguarding their soil water and air quality Written by recognized experts in the field the book is intended to provide students scientists and policymakers with essential insights into holistic approaches to NUE as well as an overview of some successful case studies In the present understanding of agriculture NUE represents a question of process optimization in response to the increasing fragility of our natural resources base and threats to food grain security across the globe Further improving nutrient use efficiency is a prerequisite to reducing production costs expanding crop acreage into non competitive marginal lands with low nutrient resources and preventing environmental contamination The nutrients most commonly limiting plant growth are N P K S and micronutrients like Fe Zn B and Mo NUE depends on the ability to efficiently take up the nutrient from the soil but also on transport storage mobilization usage within the plant and the environment A number of approaches can help us to understand NUE as a whole One involves adopting best crop management practices that take into account root induced rhizosphere processes which play a pivotal role in controlling nutrient dynamics in the soil plant atmosphere continuum New technologies from basic tools like leaf color charts to sophisticated sensor based systems and laser land leveling can reduce the dependency on laboratory assistance and manual labor Another approach concerns the development of crop plants through genetic manipulations that allow them to take up and assimilate nutrients more efficiently as well as identifying processes of plant responses to nutrient deficiency stress and exploring natural genetic variation Though only recently introduced the ability of microbial inoculants to induce NUE is gaining in importance as the loss immobilization release and availability of nutrients are mediated by soil microbial processes

They also contribute to the diversity, richness, and production stability of agro ecosystems. Millets include sorghum, pearl millet, finger millet, foxtail millet, proso millet, barnyard millet, little millet, and kodo millet, while the other group, which are not cereals but consumed as cereals and generally referred to as pseudo cereals, comprises grain amaranths, buckwheat, and chenopods. *Millets and Pseudo Cereals* presents current information on the genetic architecture of important economic traits and the genomic resources for gene-enabled breeding. This compilation contains information on the global status, available germplasm resources, nutritional value, breeding advancements, genomics applications, and sustainability of agriculture through millets and pseudo cereals cultivation. This book is a valuable resource for those conducting research and exploring new areas for advancing crop genetic understanding. It explores the current challenges of pseudo cereal production and how that can be overcome by developing genetic and breeding resources using appropriate germplasm. It provides holistic information on millets and pseudo cereals, features global perspectives from an international contributing team of authors.
