Tao Of Chaos Merging East And West:

Tao of Chaos Katya Walter, 1996 This exciting study explores similarities between China's I Ching and the genetic code and concludes that the same structure found in DNA also exists in this ancient book of wisdom as well as in spiders webs sunflowers and antique Indian rugs This Walter maintains is evidence that a Master Plan exists in which the Divine is the all encompassing pattern present in all life Illustrations Charts *The Zen of Magic Squares, Circles, and Stars* Clifford A. Pickover, 2011-11-28 Humanity's love affair with mathematics and mysticism reached a critical juncture legend has it on the back of a turtle in ancient China As Clifford Pickover briefly recounts in this enthralling book the most comprehensive in decades on magic squares Emperor Yu was supposedly strolling along the Yellow River one day around 2200 B C when he spotted the creature its shell had a series of dots within squares To Yu's amazement each row of squares contained fifteen dots as did the columns and diagonals When he added any two cells opposite along a line through the center square like 2 and 8 he always arrived at 10 The turtle unwitting inspirer of the Yu square went on to a life of courtly comfort and fame Pickover explains why Chinese emperors Babylonian astrologer priests prehistoric cave people in France and ancient Mayans of the Yucatan were convinced that magic squares arrays filled with numbers or letters in certain arrangements held the secret of the universe Since the dawn of civilization he writes humans have invoked such patterns to ward off evil and bring good fortune Yet who would have guessed that in the twenty first century mathematicians would be studying magic squares so immense and in so many dimensions that the objects defy ordinary human contemplation and visualization Readers are treated to a colorful history of magic squares and similar structures their construction and classification along with a remarkable variety of newly discovered objects ranging from ornate inlaid magic cubes to hypercubes Illustrated examples occur throughout with some patterns from the author's own experiments The tesseracts circles spheres and stars that he presents perfectly convey the age old devotion of the math minded to this Zenlike quest Number lovers puzzle aficionados and math enthusiasts will treasure this rich and lively encyclopedia of one of the few areas of mathematics where the contributions of even nonspecialists count System Theories and A Priori Aspects of Perception J.S. Jordan, 1998-04-21 This book takes as a starting point John Dewey's article The Reflex Arc Concept in Psychology in which Dewey was calling for in short the utilisation of systems theories within psychology theories of behaviour that capture its nature as a vastly complex dynamic coordination of nested coordinations This line of research was neglected as American psychology migrated towards behaviourism where perception came to be thought of as being both a neural response to an external stimulus and a mediating neural stimulus leading to or causing a muscular response As such perception becomes a question of how it is the perceiver creates neural representations of the physical world Gestalt psychology on the other hand focused on perception itself utilising the term Phenomenological Field a term that elegantly nests perception and the organism within their respective as well as relative levels of organisation With the development of servo mechanisms during the second world war

systems theory began to take on momentum within psychology and then in the 1970s William T Powers brought the notion of servo control to perception in his book *Behavior The Control of Perception* Since then scientists have come to see nature not as linear chain of contingent cause effect relationships but rather as a non linear unpredictable nesting of self referential emergent coordinations best described as Chaos theory The implications for perception are astounding while maintaining the double aspect nature of perception espoused by the Gestalt psychologists In short system theories model perception within the context of a functioning organism so that objects of experience come to be seen as scale dependent psychophysically neutral phenomenological transformations of energy structures the dynamics of which are the result of evolution and therefore a priori to the individual case This a priori homological unity among brain perception and world is revealed through the use of systems theories and represents the thrust of this book All the authors are applying some sort of systems theory to the psychology of perception However unlike Dewey we have close to a century of technology we can bring to bear upon the issue This book should be seen as a collection of such efforts

A Fractal Epistemology for a Scientific Psychology Terry Marks-Tarlow,Yakov Shapiro,Katthe P. Wolf,Harris L. Friedman,2020-01-06

Fractal dynamics provide an unparalleled tool for understanding the evolution of natural complexity throughout physical biological and psychological realms This book s conceptual framework helps to reconcile several persistent dichotomies in the natural sciences including mind brain linear nonlinear subjective objective and even personal transpersonal processes A fractal approach is especially useful when applied to recursive processes of consciousness both within their ordinary and anomalous manifestations This novel way to study the interconnection of seemingly divided wholes encompasses multiple dimensions of experience and being It brings together experts in diverse fields neuropsychologists psychiatrists physicists physiologists psychoanalysts mathematicians and professors of religion and music composition to demonstrate the value of fractals as model method and metaphor within psychology and related social and physical sciences The result is a new perspective for understanding what has often been dismissed as too subjective idiosyncratic and ineffably beyond the scope of science bringing these areas back into a natural scientific framework

Beyond Measure Jay Kappraff,2002

library the shapes of the Hebrew letters and the shapes of biological forms Part II shows how many of the same numbers and number sequences are related to the modern mathematical study of numbers dynamical systems chaos and fractals

Clinical Chaos Linda Chamberlain, Michael R. Butz, 2016-01-28 Psychology and the social sciences are in need of a new foundation one that provides a better model for understanding complex behavior Chaos theory and its newest permutation complexity theory offers an innovative exciting and potentially revolutionary leap forward in the evolution of scientific thought In Clinical Chaos therapists and theoreticians from various areas in the social sciences will explore the relevance and implications for non linear dynamics in observing explaining and understanding human behavior At last the scientific search can again encompass surprise transformation unpredictability and pattern This book is intended to introduce social scientists to chaos through paths that are already familiar By linking chaos theory with existing psychological theories and established areas of clinical pursuit Clinical Chaos emphasizes the relevance of this new science in providing a more flexible useful model for complexities of life

Wicked Valuations Michael McDermott, 2018-07-16 Traditional valuation approaches are increasingly recognised as being insufficient to address the wicked valuation problems of the diverse peoples and groups that inhabit the globe from north south east to west This book demonstrates the limitations of science and in particular economics as the foundation on which valuations are traditionally based It demonstrates the importance of and provides justification for the personal cultural values and norms which underpin our assessment of value and the fact that these vary across the world In *Wicked Valuations* Michael McDermott develops a means of engaging with highly complex valuation problems His autoethnography provides a lens to draw on knowledge and experience from his 40 years in land valuation in Africa and the Asia Pacific while documentary analysis is used to draw in the views of other valuation practitioners and scholars who are becoming increasingly aware of the need to develop ways to adapt land valuation processes to the complexity of our contemporary landscapes
