people use this technique in your own life Reply yes we can call it the induction technique How is it First of all we will go over metaphysical values again of course creation means reaching a destiny in this way there are various destinies on a line or on a cycle In other words there is such a thing as faith in destiny it has been written before but this destiny is the destiny of possibilities Think of it this way you only have three numbers 1 2 3 no other numbers these three numbers are your potential destiny so you are confined here What can you do with these three numbers Here knowledge wisdom and effort come into play you can do subtraction addition permutation they are all your destiny but the number 4 is outside of your destiny there is nothing written for you there you can create change here Simply God has a science there are many options you can make with the numbers 1 2 3 in this science all of them are written for you the rest is to learn the science and technique of it In time you will understand what potential you have by using the science of nature So each result creates a pattern a kind of pattern Creation also means that a person moves from one mold to another and is reshaped there that is models and patterns are also present there For example 1 2 1 this pattern already exists you pour yourself into it there creation takes place This is how God does these things by his people there is nothing unknown let me give you another example For example you in position A are having a problem let s call it position A in distress Then you asked for the help of the angel with the permission of Allah and for some reason the angel decided to help you for example you wish for healing you are sick you have a wish for healing That is the disease is a model your healed state is another model the angel has healed you from the position of illness puts it in position For example it does not make a giraffe out of you it does not create such a possibility for you or it does not give you immortality We have the mirror of the observer the observer and the creation process for an observer again based on faith in destiny let s assume that the potential number 1 2 is the variation of these two numbers that an observer can see in his mirror no matter what he does nothing else It can increase the possibilities with knowledge but there is a but there In fact God takes care of his work namely his creation with these aims While the observer sees his own possibilities in his mirror he reaches the paradox of infinite mirrors since he is also an observed to those possibilities Just like the servant whom God loves and the servant who loves God very much these are the reflections of man as a servant in God the observing god determines the area he observes with the fate and potential of the observer It sounds complicated but it s not it all falls into place towards the end So how does this happen We are talking about a single human being the observer and the agent interfering person where is the field he she observes He cannot observe anything but manifestation that is he observes creation Observing it creates its own combination For example when looking at a work of art one person looks with admiration respects the effort for the art there and another looks with envy both of which are potentials within those numerical possibilities For example one commits a sin one observer looks forgiving the other looks vindictive and vengeful which is choosing a destiny within possibilities Now let s look at the rest of the sentence the concept of induction what is that concept This is a very interesting concept it is a technology that is already used today but even those

who use or create this technology do not know the essence of the business and here is the secret of creation God's creation technique is induction it is to change the structure of a substance without touching it we can also call it the power of thought that is if you hit the iron with a hammer the iron will be crushed What is creation It means breaking the will of something What is will Any substance has a self preservation that is a resistance structure to maintain its current shape which is also a necessary thing So if an outside force wants to create on something external it has to break its will For example the cracking of the seed means the breaking of the will of the seed Why does he have willpower Because God protects it that is he does it so that it does not break in an incorrect and unsuitable environment that is in areas where creation will not take place The seed cracks in the soil in various special circumstances like this because only there it can enter into creation In other words God creates his creations by breaking the shell of things breaking his will to resist and in this way he creates constantly According to what and for what purpose does God constantly create Here again induction comes into play God chooses creation but you choose how to create that's the interesting part For example electrolysis technique is an induction technique what is it You put a metal in acidic or silver or chrome water you give electricity to the metal the electrified metal attracts the liquid metal in the water and becomes a coating The other technique that does this is psychic therapy by suggestion that is no surgical procedure all by using a technique from afar and suitable for the next possibility of the thing For example you cannot apply this technique to plastic it is not among its fate options there is no electrolysis what does that mean As a potentially destiny item your creation pattern determines the possibilities In other words while creating God he connected the system to a kind of automatic order your destiny as a subject and a creation on you with the knowledge that comes over your attempt as a subject That is a kind of breaking of will followed by remodeling for change that is creation is in the form of both the observed and the observing you having reached any of your destiny possibilities at that moment getting sick is a possibility getting healed is a possibility it's all there Let's look at the creation process of god based on scriptures seven layers of heaven and above it the chair of God that is the universe created by God Think of it this way nine balls are intertwined The first ball is our universe the next seven floors are seven heavens the last one is the lectern which we also call the god floor we have such a model four archangels hold this lectern these are of course a symbolic expression but we will look at what it tells Where could God have started creation After God created all these and his angels he creates Adam determines the Doomsday time and the beginning and the end are created together I wonder why he created such a model Why is something done even if it is God Even God cannot escape his own rule **Saving the World** Lynnette Porter, Lynnette Porter, David Lavery, 2010-12-14 Essays analysis and exploration of hit TV show Heroes from experts in the field of TV analysis [The Science Fiction Source Book](#) David Wingrove, 1984 The science fiction source book is packed with information about writers novels short stories magazines and works of criticism **Scientific American**, 1905 Monthly magazine devoted to topics of general scientific interest **From Conception to Birth** Cathy Chapman, 2019-08-19 You are

Umehara,Kentaro Saji,Kotaro Yamada,2021-11-29 This book provides a unique and highly accessible approach to singularity theory from the perspective of differential geometry of curves and surfaces It is written by three leading experts on the interplay between two important fields singularity theory and differential geometry The book introduces singularities and their recognition theorems and describes their applications to geometry and topology restricting the objects of attention to singularities of plane curves and surfaces in the Euclidean 3 space In particular by presenting the singular curvature which originated through research by the authors the Gauss Bonnet theorem for surfaces is generalized to those with singularities The Gauss Bonnet theorem is intrinsic in nature that is it is a theorem not only for surfaces but also for 2 dimensional Riemannian manifolds The book also elucidates the notion of Riemannian manifolds with singularities These topics as well as

elementary descriptions of proofs of the recognition theorems cannot be found in other books. Explicit examples and models are provided in abundance along with insightful explanations of the underlying theory as well. Numerous figures and exercise problems are given becoming strong aids in developing an understanding of the material. Readers will gain from this text a unique introduction to the singularities of curves and surfaces from the viewpoint of differential geometry and it will be a useful guide for students and researchers interested in this subject.
