The Hepatobiliary System:

The Hepatobiliary System W. Taylor, 2013-06-29 A volume on the biliary system appeared in 1965 based on a symposium of the NATO Advanced Institute held in September 1963 in Newcastle upon Tyne in England. It soon became an authoritative text on the problems of the biliary tract and for instance the discussion on the biliary secretion of organic anions, organic cations and inorganic ions were classic references. The worn pages of the volume in many libraries including my own bespeak its usefulness over ten long years. The initiative and energy of the Director of the first Institute have to be admired even more so since he was able to assemble a Second Institute in Aalborg, Denmark in 1975. His wisdom is reflected in the selection of the subjects discussed. The comparison between the two volumes tells something about the advancement in the time interval in knowledge about liver and biliary tract diseases, about the turnover of researchers interested in the liver and its diseases and also about the present philosophy in biologic science. For this comparison this volume is particularly suited because in contrast to many other recent conferences the more leisurely pace of the NATO Institutes permits more comprehensive but still scholarly reviews of the problems. The foreword of the first volume written by my colleague the late Harry Sobotka expresses his now dated astonishment about the progress of knowledge of biology of the bile so much less accessible to study than urine.

The Biliary System David Q.-H. Wang, 2012-03-12 The exponential expansion of knowledge in the field of hepatobiliary diseases makes systematic revisions of current concepts almost mandatory nowadays. This eBook summarizes the progress in understanding the molecular mechanism of cholesterol and bile acid metabolism and the physical chemistry of biliary lipids with emphasis on biliary lipid metabolism that is regulated by nuclear receptors in the hepatobiliary system. By guiding the readers through the various aspects of anatomy, physiology and biochemistry of all players involved in bile formation, this eBook is intended to be a compendium of recent progresses in understanding the molecular mechanisms of cholesterol and bile acid metabolism.

Bile Acids and the Hepatobiliary System G. Paumgartner, A. Stiehl, W. Gerok, 1993-06-30 Bile acids have recently found application in the treatment of hepatobiliary diseases. Chenodeoxycholic acid and ursodeoxycholic acid have proved to be effective agents for the dissolution of cholesterol gallstones and ursodeoxycholic acid has been shown to have beneficial effects in patients with chronic cholestatic liver disease such as primary biliary cirrhosis or primary sclerosing cholangitis. The question of the long term benefit for the patient remains open and the mechanism of action is still unclear. As a consequence much basic and clinical research is being conducted on bile acid therapy. The XIIth International Bile Acid Meeting brought together researchers and clinicians from around the world and was dedicated to basic and clinical aspects of the use of bile acids in the therapy of hepatobiliary disease.

Stem Cells and Cancer in Hepatology Yun-Wen Zheng, 2018-05-18. Stem Cells and Cancer in Hepatology: From the Essentials to Application offers basic scientists and clinicians in the fields of stem cells, hepatology, and oncology an overview of the interaction between liver biology, stem cells, and cancer. It discusses how the liver performs regeneration and repair, the role stem cells play in these processes, and the mechanisms by which liver cancers are initiated and developed. As the field of stem cells and cancer, stem cells in hepatology is new and dynamic, thus making it difficult for researchers and clinicians to understand the most relevant historic and novel studies, this volume addresses that challenge. Addresses both the basic and clinical perspectives of the topic, including sections on normal and cancer stem cells of the liver. Provides coverage of the molecular mechanisms of liver development, the proliferation of hepatic progenitor cells during development, epithelial cell plasticity, generation of hepatocytes by transdifferentiation, liver tissue engineering, and more. Presents a study of hepatic stem cells that will help readers understand critical events during development, stem cell differentiation, towards functional liver cell fate, and tumor initiation.
