The Hidden Spring:

The Hidden Spring Mark Solms, 2021-02-16 A revelatory new theory of consciousness that returns emotions to the center of mental life For Mark Solms one of the boldest thinkers in contemporary neuroscience discovering how consciousness comes about has been a lifetime's quest Scientists consider it the hard problem because it seems an impossible task to understand why we feel a subjective sense of self and how it arises in the brain Venturing into the elementary physics of life Solms has now arrived at an astonishing answer In *The Hidden Spring* he brings forward his discovery in accessible language and graspable analogies Solms is a frank and fearless guide on an extraordinary voyage from the dawn of neuropsychology and psychoanalysis to the cutting edge of contemporary neuroscience adhering to the medically provable But he goes beyond other neuroscientists by paying close attention to the subjective experiences of hundreds of neurological patients many of whom he treated whose uncanny conversations expose much about the brain's obscure reaches Most importantly you will be able to recognize the workings of your own mind for what they really are including every stray thought pulse of emotion and shift of attention *The Hidden Spring* will profoundly alter your understanding of your own subjective experience

Geological Survey Professional Paper ,1987 The National Gazetteer of the United States of America Geological Survey (U.S.),1987 Knowledge as a Feeling Troy A. Swanson,2023-05-08 Much of information science theory assumes a type of rationality in how individuals process the world around them but the impact of misinformation and disinformation along with the polarization of society into competing information factions calls for new understandings around our relationships to information Advances in neuroscience and psychology shed new light on how the brain processes information using both conscious and unconscious systems Current theory in neuroscience emphasizes that the mind is not a unified whole but a network of networks constructing reality to anticipate needs Knowledge is not a rational process but centers around the feeling of knowing which is the net output of competing brain processes The feeling of knowing assumes a group context and offers a social epistemological stance that judges knowledge within this group context With knowledge built into groups power dynamics allow work to be accomplished but also privilege some group members over others The feeling of knowing has significant implications for information science challenging theoreticians and practitioners to reconsider how individuals process information For information behavior the feeling of knowing offers a fuller picture looking at conscious and unconscious processing in the production of knowledge For information literacy the feeling of knowing sheds light on how individuals evaluate information and synthesize new sources into their existing knowledge Ultimately the feeling of knowing leads us toward new reflective and metacognitive tools that help meet this moment in the evolution of our information ecosystem This book explores the idea that knowing is a feeling that results from the interactions of the brain s unconscious and conscious processes and not through the accumulation of facts It s intended to help librarians educators and information scientists better understand what neuroscience and psychology are teaching about what it means to know and how our brain learns
