**Knowledge** G.L. Pandit,1983 Professor Pandit working among the admirable group of philosophers at the University of Delhi  
has written a fundamental criticism and a constructive re interpretation of all that has been preserved as serious  
epistemological and methodological reflections on the sciences in modern Western philosophy from the times of Galileo  
Newton Descartes and Leibniz to those of Russell and Wittgenstein Carnap and Popper and we need hardly add onward to  
the troubling relativisms and reconstructions of historical epistemologies in the works of Hanson Kuhn Lakatos and  
Feyerabend His themes are intriguing set forth as they are with masterly case studies of physics and the life sciences and  
within an original conceptual framework for philosophical analysis of the processes functions and structures of scientific  
knowing Pandit's contributions deserve thoughtful examination For our part we wish to point to some among them 1 an  
interactive articulation of subjective and objective factors of both problems and theories in the course of scientific  
development 2 a striking contrast between the explanatory power of a scientific theory and its resolving power i e

**Scientific Discovery** Aharon Kantorovich,1993-01-01 Kantorovich analyzes the notion of discovery He views the process  
as inference and questions whether there is logic or method to discovery He provides an alternative perspective on scientific  
discovery that explains the difficulties in finding a satisfactory method of discovery Within the framework of evolutionary  
epistemology discovery is treated as a phenomenon in its own right having psychological and social dimensions Science is  
viewed as a continuation of the evolutionary process whereby creative discovery plays a role similar to blind mutation in  
biological evolution From this perspective serendipity and tinkering are key notions in understanding the creative process

*The Growth of Mathematical Knowledge* Emily Grosholz,Herbert Breger,2013-04-17 Mathematics has stood as a bridge  
between the Humanities and the Sciences since the days of classical antiquity For Plato mathematics was evidence of Being  
in the midst of Becoming garden variety evidence apparent even to small children and the unphilosophical and therefore of  
the highest educational significance In the great central similes of *The Republic* it is the touchstone of intelligibility for  
discourse and in the *Timaeus* it provides in an oddly literal sense the framework of nature insuring the intelligibility of the  
material world For Descartes mathematical ideas had a clarity and distinctness akin to the idea of God as the fifth of the  
*Meditations* makes especially clear Cartesian mathematical constructions as well as objects envisioned by the soul in the  
*Principles* the work of the physicist who provides a quantified account of the machines of nature hovers between description

and constitution For Kant mathematics reveals the possibility of universal and necessary knowledge that is neither the logical unpacking of concepts nor the record of perceptual experience In the Critique of Pure Reason mathematics is one of the transcendental instruments the human mind uses to apprehend nature and by apprehending to construct it under the universal and necessary laws of Newtonian mechanics

**History of Scientific Ideas. ... Being the First Part of the Philosophy of the Inductive Sciences. The Third Edition** William Whewell, 1858 [History of Scientific Ideas Being the First Part of the Philosophy of the Inductive Sciences by William Whewell](#), 1858 [The Origins of the Idea of Scientific Progress](#) Daniel Špelda, 2024-06-21 This volume offers a new interpretation of the genesis of the idea of scientific progress in early modern science and philosophy The interpretation argues that the idea of scientific progress was not a historical category but an epistemological one The main thesis of the book posits that the idea of scientific progress was a methodological means of dealing with the contingency of nature To illustrate the novelty of the idea the individual chapters compare several features of Renaissance natural philosophy with a new regime of knowledge that included time as an inevitable factor of empirical research The temporal regime of knowledge is illustrated by the work of Bernard de Fontenelle and his colleagues at the Académie des sciences in Paris at the end of the 17th century The new interpretation remedies a gap in recent scholarship where the idea of scientific progress has been overlooked even though the early modern natural philosophers themselves used it to describe the nature of their research The book places both well known texts and less studied documents in a new light thus contributing to the lively and rich debate on the origins and nature of early modern science and philosophy It is of interest to scholars studying the history of early modern philosophy and science
