

An aerial photograph of a lush tropical rainforest canopy. The forest is a dense, vibrant green, with sunlight filtering through the leaves, creating a dappled light effect. In the upper right, a large, gnarled tree branch extends horizontally across the frame. A person is rappelling down this branch, suspended by ropes and gear. The person is wearing a red shirt and blue pants. The overall scene conveys a sense of adventure and exploration in a remote, natural setting.

The High Frontier Exploring The Tropical Rainforest Canopy:

The High Frontier Mark W. Moffett, 1993 Loaded with aerial plants and the millions of creatures dependent upon them tropical tree crowns are the last and greatest ecological frontier Hundreds of species earthworms frogs flowers shrubs never descend to earth during their lifetimes Eight out of ten remain unnamed and unclassified by science In *The High Frontier* Mark W. Moffett does for the tropical rainforest canopy what Jacques Cousteau did thirty years ago for undersea life Donning rock climbing gear to join researchers working 150 feet and more above the ground Moffett photographed strangler trees in Borneo giant squirrels in India and canopy bears in Colombia He entered the terrifying world of arboreal spiders and ants photographing them under extreme magnification His coverage of this new science is unparalleled in any other field Described as a world roving zoologist by National Geographic magazine for his work on five continents Moffett has documented virtually every major active canopy research site The immediacy of his writing and the intelligence of his photography make the canopy's fantastic architecture and unearthly inhabitants accessible to the general reader In the tradition of the great nineteenth century explorers he captures the struggles of the individual scientists and the passions that enable them to brave perilous situations in pursuit of their work *The High Frontier* is a modern classic of scientific discovery

Tropical Forest Canopies: Ecology and Management K.E. Linsenmair, Andrew Davis, B. Fiala, M.R.

Speight, 2013-03-14 Almost half of all life on earth may exist in the world's forest canopies They may also play a vital role in maintaining the planet's climate yet they remain largely unexplored owing to difficulties of access They are renowned for their great diversity and role in forest functioning yet there are still great gaps in the understanding of this last biological frontier This seminal book shows how canopy science is now in a position to answer many of the outstanding questions among which are some of the most pressing environmental issues society is presently facing It represents a major summary of the current understanding of canopy ecology and maps a path forward into a greater understanding of tropical forest ecology and management at a time when the very future of this ecosystem is threatened by humanity's actions [Treetops at Risk](#) Margaret Lowman, Soubadra Devy, T. Ganesh, 2013-06-22 Forest canopies not only support high terrestrial biodiversity but also represent a critical interface between the atmosphere and the earth They provide goods and services to support diverse human communities and offer opportunities to explore sustainable use of these resources for many generations of local livelihoods Forest canopies are important carbon sequestration units and in this sense serve as climate control for the planet Canopies are important energy production centers for the planet and serve as the basis for many food chains The canopy can also act as a hook for education outreach and conservation inspiring ecotourism through recreation and other sustainable uses such as treetop walks zip lines and birding Despite these critical services provided by forest canopies almost no dedicated research in the treetops was initiated until as recently as the late 1970s when single rope techniques were developed by mountaineering professionals and adapted for use in the canopy Subsequently an array of canopy access tools

was designed in the 1980s and early 1990s that have opened up this eighth continent for global exploration and discovery. This volume uses the major findings of the 5th international canopy conference as a platform for organization but it does not mimic the sessions and presentations of the conference itself. Instead it builds on the important themes that emerged from the conference and solicits articles that represent future priorities and advancements for canopy science in the next decade. Despite the global efforts of hundreds of forest scientists over the past 3 decades forests are degrading at an accelerated rate and biodiversity is increasingly threatened by human activities. Given these trends despite the very best efforts of the world's best scientists other approaches must be taken. This volume summarizes the issue of treetops at risk and assembles a global authorship to examine past accomplishments and future initiatives critical in forest conservation.

A rich dramatic tale that ranges from the personal to the literally earth shaking. The New York Times The River of Doubt it is a black uncharted tributary of the Amazon that snakes through one of the most treacherous jungles in the world. After his humiliating election defeat in 1912 Roosevelt set his sights on the most punishing physical challenge he could find the first descent of an unmapped rapids choked tributary of the Amazon. Together with his son Kermit and Brazil's most famous explorer Cândido Mariano da Silva Rondon Roosevelt accomplished a feat so great that many at the time refused to believe it. In the process he changed the map of the western hemisphere forever. Along the way Roosevelt and his men faced an unbelievable series of hardships losing their canoes and supplies to punishing whitewater rapids and enduring starvation Indian attack disease drowning and a murder within their own ranks.
