The examples on the CD ROM accompanying the book include material of undergraduate to current research level in disciplines ranging from chemistry and chemical engineering to molecular biology and geology. **Wondering About**

Physics Dewey I. Dykstra, Robert G. Fuller, 1988-06-02 This companion to introductory physics books gives readers practice solving problems on a computer; almost any computer running almost any spreadsheet software will do. Your spreadsheet program must be able to do trig and inverse trig functions and exponential and logarithmic base e functions; graphing capability is a plus. Working through these investigations provides excellent professional practice yet no calculus is used. Contains 53 investigations including freely falling objects, finding the center of mass, launching a rocket, the Doppler shift, Rutherford scattering and relativistic speeds of electrons in a linear accelerator. **Spreadsheet Physics** Charles W.
