The Maryland Amphibian and Reptile Atlas Heather R. Cunningham, Nathan H. Nazdrowicz, 2018-11-26 The definitive resource for finding identifying and conserving Maryland's amphibians and reptiles Naturalists herpetologists and ecologists alike agree that tracking herpetofauna is a challenging undertaking Scientists are concerned about the decline of once familiar species but evidence has often been too anecdotal to support firm conclusions To better understand the distribution of amphibians and reptiles in Maryland and forecast species futures in a time of accelerated environmental threats conducting a comprehensive statewide survey updating 1970s era distribution maps seemed ideal However this endeavor was of an impossibly ambitious scope for scientists alone to tackle Enter the Maryland Amphibian and Reptile Atlas project comprising nearly a thousand dedicated citizen scientists who discovered and recorded the locations of herpetofauna throughout every corner of Maryland In The Maryland Amphibian and Reptile Atlas Heather R Cunningham and Nathan H Nazdrowicz present the findings of this massive undertaking This definitive guide combines nearly 160 comprehensive new herpetological maps with historical distribution maps and in depth species accounts Color photos illustrate the natural history of the 89 species of frogs salamanders turtles snakes and lizards that call the state home Essays discuss historical studies the effects of Maryland's current climate geology and habitat diversity and the myriad conservation issues these animals face This richly detailed book represents a triumph of citizen science and the culmination of an intensive research partnership It will appeal to both amateurs and professionals interested in herpetology natural history or ecology as well as those with a special interest in Maryland's biodiversity

Sounds Wild and Broken David George Haskell,2023-03-07 Finalist for the 2023 Pulitzer Prize in General Nonfiction and the 2023 PEN E O Wilson Literary Science Writing Award Winner of the Acoustical Society of America s 2023 Science Communication Award A glorious guide to the miracle of life s sound The New York Times Book Review A lyrical exploration of the diverse sounds of our planet the creative processes that produced these marvels and the perils that sonic diversity now faces We live on a planet alive with song music and speech David Haskell explores how these wonders came to be In rain forests shimmering with insect sound and swamps pulsing with frog calls we learn about evolution s creative powers From birds in the Rocky Mountains and on the streets of Paris we discover how animals learn their songs and adapt to new environments Below the waves we hear our kinship to beings as different as snapping shrimp toadfish and whales In the startlingly divergent sonic vibes of the animals of different continents we experience the legacies of plate tectonics the deep history of animal groups and their movements around the world and the quirks of aesthetic evolution Starting with the origins of animal song and traversing the whole arc of Earth history Haskell illuminates and celebrates the emergence of the varied sounds of our world In mammoth ivory flutes from Paleolithic caves violins in modern concert halls and electronic music in earbuds we learn that human music and language belong within this story of ecology and evolution Yet we are also destroyers now silencing or smothering many of the sounds of the living Earth Haskell takes us to threatened forests noise filled oceans and loud city streets and shows that sonic crises are not mere losses of sensory ornament Sound is a generative force and so the erasure of sonic diversity makes the world less creative just and beautiful The appreciation of the beauty and brokenness of sound is therefore an important guide in
