The book uniquely combines Earth science and the latest space tech and is designed to fascinate and reassure. It includes a multitude of news-related themes: climate change, deforestation, wildlife tracking, storm fire warnings, exploration, space junk, and more. History of the development of spy satellites beginning with the Corona in the 1950s includes information about space surveillance over the Soviet Union and secrecy of the program. *Spies in the Sky* Pat Norris, 2008

In this book Patrick Norris responds to the 50th Anniversary of the dawn of the Space Age, the launch of Sputnik 1, with a review of the most important historical applications of space science for the benefit of the human race during that half century, focusing on the prevention of nuclear war. In developing this story, Norris illuminates a little-known aspect of the Space Age, namely the military dimension. Eyeing the Red Storm Robert M. Dienesch, 2016-04

In 1954, the U.S. Air Force launched an ambitious program known as WS 117L to develop the world's first reconnaissance satellite. The goal was to take photographic images from space and relay them back to Earth via radio. Because of technical issues and bureaucratic resistance, however, WS 117L was seriously behind schedule by the time Sputnik orbited Earth in 1957 and was eventually cancelled. The Air Force began concentrating instead on new programs that eventually launched the first successful U.S. spy satellites. *Eyeing the Red Storm* examines the birth of space-based reconnaissance not from the perspective of CORONA, the first photo reconnaissance satellite to fly, but rather from that of the WS 117L. Robert M. Dienesch's revised assessment places WS 117L within the larger context of Dwight D. Eisenhower's presidency, focusing on the dynamic between military and civilian leadership. Dienesch demonstrates how WS 117L promised Eisenhower not merely military intelligence but also the capacity to manage national security against the Soviet threat. As a fiscal conservative, Eisenhower believed a strong economy was the key to surviving the Cold War and saw satellite reconnaissance as a means to understand the Soviet military challenge more clearly and thus keep American defense spending under control. Although WS 117L never flew, it provided the foundation for all subsequent satellites, breaking theoretical barriers and helping to overcome major technical hurdles which ensured the success of America's first working reconnaissance satellites and their photographic missions during the Cold War. Reconnaissance satellites first deployed in the 1960s to peer into the Soviet Union and other secretive enemy states have also been used by civilian agencies of the federal government to assist with mapping, disaster relief, and environmental concerns. Post 9/11, the Bush Administration encouraged use of satellite-derived data for homeland security and law enforcement purposes in addition to the civil applications. This report provides background on the development of RS and identifies the roles various agencies play in their management and use. Also, a discussion of legal considerations including whether RS might constitute a search within the meaning of the 4th Amendment, an overview of statutory authorities as well as restrictions that might apply. **U-Boats To Spy Satellites** Ken Hornberg, 2007-05-24
