Teacher In Space Christa McAuliffe And The Challenger Legacy:

Teacher in Space Colin Burgess, 2000-01-01 Profiles the teacher who died with the NASA crew when the Challenger exploded in 1986 and describes the various ways her enthusiasm for learning and exploration determination to teach children and love of life continues all over the world

Slipping the Surly Bonds Mary E. Stuckey, 2006 Millions of Americans including hundreds of thousands of schoolchildren watched in horror as the Challenger shuttle capsule exploded on live television on January 28 1986 Coupled with that awful image in Americans memory is the face of President Ronald Reagan addressing the public hours later with words that spoke to the nation s shock and mourning Focusing on the text of Reagan s speech author Mary Stuckey shows how President Reagan s reputation as the Great Communicator adds significance to our understanding of his rhetoric on one of the most momentous occasions of his administration

Lady Astronauts, Lady Engineers, and Naked Ladies Karin Hilck, 2019-07-08 The book *Lady Astronauts Lady Engineers and Naked Ladies* is a gender history of the American space community and by extension a social history of American society in the twentieth century during the Cold War In order to expand and differentiate the prevalent postwar narrative about gender relations and cultural structures in the United States the book analyzes several different groups of women interacting in different social spaces within the space community It therewith grants insight into the several layers of female participation and agency in the community and the gender and race based obstacles and hurdles the female prospective astronauts scientists engineers artists administrators writers hostesses secretaries and wives were faced with at NASA and in the space industry In each chapter a different social space within the space community is analyzed The spaces where the women lived and worked are researched from a media individual and institutional angle ultimately revealing the differing gender philosophies communicated in the public sphere and the space community workplaces by government and space community officials While women were publicly encouraged to participate in the American space effort to beat the Soviet Union in the race to the moon women had to deal with gender based barriers which were integral to the structures of the space community just as they were an intrinsic component of all societal structures in the United States in the 1960s The female space workers who were often perceived as disrupters of the prevalent social order in the space community and discriminated by some of their male colleagues and bosses on a personal basis still managed to assert themselves They molded pockets of agency in the space community workspaces without the facilitation of regulations on the part of NASA that might have provided them with easier access or more agency Thus the space community a place of technological innovation was not necessarily also a place of social innovation but a community with a government agency at its center that mainly mirrored the current changing social order conventions and policies in the 1960s as well as in the 1970s and 1980s Nevertheless the women presented in this book were instrumental in advancing and consolidating the social transformation that happened within the space community and the United States and therefore make intriguing subjects of research Thus this systematic analysis of the connection

between gender space and the Cold War adds a new dimension to space history as well as expands the discourse in American history about gender relations and the opportunities of women in the twentieth century **The Last of NASA's Original**

Pilot Astronauts David J. Shayler, Colin Burgess, 2017-06-19 Resulting from the authors deep research into these two pre Shuttle astronaut groups many intriguing and untold stories behind the selection process are revealed in the book The often extraordinary backgrounds and personal ambitions of these skilled pilots chosen to continue NASA s exploration and knowledge of the space frontier are also examined In April 1966 NASA selected 19 pilot astronauts whose training was specifically targeted to the Apollo lunar landing missions and the Earth orbiting Skylab space station Three years later following the sudden cancellation of the USAF s highly classified Manned Orbiting Laboratory MOL project seven military astronauts were also co opted into NASA s space program This book represents the final chapter by the authors in the story of American astronaut selections prior to the era of the Space Shuttle Through personal interviews and original NASA documentation readers will also gain a true insight into a remarkable age of space travel as it unfolded in the late 1960s and the men who flew those historic missions **NASA's Scientist-Astronauts** Shayler David, Colin Burgess, 2007-09-19

Mounting pressure in the early 1960s from the National Academy of Sciences NAS to study ways of expanding the role of astronauts to conduct science on future space missions led to NASA s conclusion that flying scientifically trained crewmembers would generate greater returns from each mission NASA and industry studies continued investigating possibilities that could lead to the eventual creation of the first space stations using surplus Apollo hardware through the Apollo Applications Programme AAP There was also a growing interest within the military to create their own manned space station programme conducting on orbit experiments and research with strategic advantages for national security In October 1964 the Soviets launched Voskhod 1 whose 3 man crew were identified as the first scientific passengers in space A few days later NASA and the NAS had completed joint studies into the possibility of using scientists in the manned space programme and invited scientists to apply for astronaut training In selecting the first group of scientist astronauts NASA had one firm requirement any person accepted into the programme would have to qualify as a military jet pilot While the second group of scientists were completing their academic survival and flight training programme the remaining members of the first scientist astronaut group were involved in supporting the developing Apollo Applications programme and the Apollo lunar programme

The Diggers of Colditz Jack Champ, Colin Burgess, 2019-06-17 Colditz Castle was Nazi Germany s infamous escape proof wartime prison where hundreds of the most determined and resourceful Allied prisoners were sent Despite having more guards than inmates Australian Lieutenant Jack Champ and other prisoners tirelessly carried out their campaign to escape from the massive floodlit stronghold by any means necessary In this riveting account by turns humorous heartfelt and tragic historian Colin Burgess and Lieutenant Jack Champ from the point of view of the prisoners themselves tell the story of the twenty Australians who made this castle their home and the plans they made that were so crazy that some even

achieved the seemingly impossible escape A stirring testimony of mateship We are often on tenterhooks always impressed by their determination industry and courage Australian Book Review **Footprints in the Dust** Colin Burgess,2021-11-02

Following the fortieth anniversary of Apollo 11 as NASA prepares to return astronauts to the moon **Footprints in the Dust** offers a thorough engrossing and multifaceted account of the Apollo missions The flight of Apollo 11 was a triumph of human endeavor persistence and technology one of the greatest achievements in human history This book begins with the mission that sent Neil Armstrong and Edwin Buzz Aldrin to the moon then follows American spaceflight through the harrowing rescue of Apollo 13 before moving on to the successful joint Apollo Soyuz mission in 1975 Drawing on extensive research and interviews with key figures in the space program the authors convey the human drama and chart the technological marvels that went into the Apollo missions They also put the accomplishments of American spaceflight into historical context examining the competitive space race with the Soviet Union the roles of politics and personality in launching the mission and the consequences practical and profound of this giant leap for mankind Shattered Dreams Colin Burgess,2019-05-01

Shattered Dreams delves into the personal stories and recollections of several men and women who were in line to fly a specific or future space mission but lost that opportunity due to personal reasons mission cancellations or even tragedies While some of the subjects are familiar names in spaceflight history the accounts of others are told here for the first time Colin Burgess features spaceflight candidates from the United States Russia Indonesia Australia and Great Britain Shattered Dreams brings to new life such episodes and upheavals in spaceflight history as the saga of the three Apollo missions that were cancelled due to budgetary constraints and never flew NASA astronaut Patricia Hilliard Robertson who died of burn injuries after her airplane crashed before she had a chance to fly into space and a female cosmonaut who might have become the first journalist to fly in space Another NASA astronaut was preparing to fly an Apollo mission before he was diagnosed with a disqualifying illness There is also the amazing story of the pilot who could have bailed out of his damaged aircraft but held off while heroically avoiding a populated area and later applied to NASA to fulfill his cherished dream of becoming an astronaut despite having lost both legs in the accident These are the incredibly human stories of competitive realists fired with an unquenchable passion Their accounts reveal in their own words and those of others close to them how their shared ambition would go awry through personal accidents illness the Challenger disaster death or other circumstances Space Shuttle Legacy Aiden Feynman,AI,2025-01-30

Space Shuttle Legacy presents a comprehensive examination of NASA's transformative Space Shuttle Program chronicling its remarkable 30 year journey from 1981 to 2011 The book explores how this ambitious initiative revolutionized human spaceflight through three groundbreaking achievements the development of reusable spacecraft establishing permanent human presence in space and advancing satellite deployment and repair capabilities Through meticulous research drawing from NASA archives and firsthand accounts the narrative reveals how the program's innovations continue to influence modern space exploration The book's chronological progression takes readers

from the program's inception in the 1970s through its most significant accomplishments including the construction of the International Space Station and the deployment of the Hubble Space Telescope. Particularly fascinating is the program's impact on scientific research where microgravity experiments led to breakthroughs in fluid dynamics and crystal growth. The author skillfully demonstrates how technologies developed for the shuttle program found practical applications in everyday life from advanced sporting equipment to medical imaging technologies. While maintaining an objective stance, the work doesn't shy away from addressing the program's challenges including its cost effectiveness and safety record. The author presents a balanced analysis of both achievements and setbacks, making complex aerospace concepts accessible to readers with basic scientific knowledge. This approach combined with detailed technical analysis and historical documentation offers valuable insights into how the Space Shuttle Program's legacy continues to shape current space initiatives including commercial spaceflight and future missions to the Moon and Mars.
