Calvin, 1998-03-02 The Cerebral Code is a new understanding of how Darwinian processes could operate in the brain to shape mental images in only seconds starting with shuffled memories no better than the jumble of our nighttime dreams but evolving into something of quality such as a sentence to speak aloud Jung said that dreaming goes on continuously but you can't see it when you are awake just as you can't see the stars in the daylight because it is too bright Calvin's is a theory for what goes on hidden from view by the glare of waking mental operations that produces our peculiarly human type of consciousness with its versatile intelligence As Piaget emphasized in 1929 intelligence is what we use when we don't know what to do when we have to grope rather than using a standard response Calvin tackles a mechanism for doing this exploration and improvement offline as we think before we act or practice the art of good guessing Surprisingly the subtitle's mosaics of the mind is not a literary metaphor For the first time it is a description of a mechanism of what appears to be an appropriate level of explanation for many mental phenomena that of hexagonal mosaics of electrical activity that compete for territory in the association cortex of the brain This two dimensional mosaic is predicted to grow and dissolve much as the sugar crystals do in the bottom of a supersaturated glass of iced tea A Bradford Book **Telling the Story in**

Schools for Growth Lois Holzman, 2016-05-06 A passionate deconstruction and reconstruction of learning development and schooling that urges teachers to explore and create new educational opportunities for themselves and their students Schools for Growth Radical Alternatives to Current Educational Models asks the following questions Can we create ways for people to learn the kinds of things that are necessary for functional adaptation without stifling their capacity to continuously create their growth Can schools become environments that support children to perform not only as learners but as developers of their lives This book challenges educators to look at the deeply rooted assumptions about schooling learning and development and urges that the way psychology and education have constructed our conceptions of what it means to teach to learn and to grow may be the most serious impediment to the learning and developing of children Beyond the criticism the author presents an original methodological reformation of what learning and development are as relational activities and then takes readers on a visit to three radical independent school settings Arguing that current educational models have been misguided by scientific psychology the author states that the dominant model of human development actually hinders development Moreover as learning theory has become infused with developmental theory over the past 30 years the overly cognitive manner in which psychologists have

come to think about thinking learning and development has become further insinuated into education Both theories learning and developmental fail to recognize the human capacity for relational revolutionary activity and for performance The prevalent mode of education acquisitional learning is grounded in a world view that gives primacy to knowledge and knowing which Holzman believes is inconsistent with ongoing developmental activity The author focuses on developmental learning a social constructionist activity theoretic conception of development which includes a transformation and synthesis of Vygotsky and philosopher Ludwig Wittgenstein She also discusses educational projects that are self conscious attempts to break with key elements of modern epistemology and the dominant psychological paradigm as they are perpetrated in contemporary educational theory and practice Their specific philosophies and practices highlight important methodological issues raised in the attempt to create postmodern schools schools more concerned with growing than knowing The School, Teacher - Student Relations And Values D.
