

Sport Management

OVERVIEW

This chapter reviews the development of sport into a major sector of economic and social activity and outlines the importance of sport management as a field of study. It discusses the unique nature of sport and the drivers of change that affect how sport is produced and consumed. A three-sector model of public, non-profit and professional sport is presented, along with a brief description of the salient aspects of the management context for sport organizations. The chapter serves as an introduction to the remaining sections of the book, highlighting the importance of each of the topics.

After completing this chapter the reader should be able to:

- Describe the unique features of sport
- Understand the environment in which sport organizations operate
- Describe the three sectors of the sport industry
- Explain how sport management is different to other fields of management study.

WHAT IS SPORT MANAGEMENT?

Sport employs many millions of people around the globe, is played or watched by the majority of the world's population and, at the elite or professional level, has moved from being an amateur pastime to a significant industry. The growth and professionalization of sport has driven changes in the consumption, production and management of sporting events and organizations at all levels of sport.

Managing sport organizations at the start of the 21st century involves the application of techniques and strategies evident in the majority of modern business, government and non-profit organizations. Sport managers engage

Advances in Soil Science ,2012-12-06 The key to sustaining the soil resource base is to maintain or enhance soil quality Soil quality cannot be seen or measured directly from the soil alone but is inferred from soil characteristics and soil behavior under defined conditions In essence the quality of soils is analogous to the health of humans and just as there is no single characteristic that can be measured to quantify a person s health there is no single measurement that can quantify soil quality However there are certain characteristics particularly when considered together that are good indicators Soil quality just as human health can be maintained or enhanced by good management practices and seriously degraded sometimes irreversibly with poor practices Soil quality is also important because it has direct and indirect effects on air quality and water quality While the enhancement of soil quality does not always assure parallel improvements in the quality of air and particularly water resources this is often the case However soil degradation is invariably accompanied by degraded qualities of both air and water resources The consensus among many scientists is that the greatest challenge is not increasing production but preventing serious deterioration of the soil and water resource base so that the production level can be sustained IIEPassport Marie O'Sullivan,2006 *Ulrich's International Periodicals Directory* Carolyn Farquhar Ulrich,1999 **Moody's International Manual** ,2000 **Sponsorship Scale Development** Nicholas J.
