Spot The Spin:

Spin This! Bill Press, 2002-01-03 We're all familiar with the warning Don't believe everything you see or hear Bill Press the popular co-host of CNN's Crossfire will have you wondering whether you should believe anything at all Spin intentional manipulation of the truth is everywhere It's in the White House in the courtrooms in headlines and advertising slogans Even couples on dates not to mention book jackets are guilty of spin Now analyst Bill Press freeze frames the culture of spin to investigate what exactly spin is who does it and why and its impact on American society as a whole Depending upon who is doing it spinning can mean anything from portraying a difficult situation in the best possible light to completely disregarding the facts with the intent of averting embarrassment or scandal Using examples drawn from recent history the Clinton presidency the Florida recount and the Bush White House Press first probes spin's favorite haunt politics In addition to surveying the incarnations of spin in the fields of journalism law and advertising Press also chews on the spin of sex and dating a word that has become the very embodiment of spin Perhaps surprisingly however Press argues that spin isn't all bad and that without it the harsh truths of our times might be too tough to swallow With the same keen sense of humor that helped make CNN's Crossfire television's premier debate show and the limited run of The Spin Room so popular Press turns the tables on the prime purveyors of spin called spin doctors noting some of their biggest guffaws and blunders As Press notes it has become abundantly clear that the twenty first century beginning as it has with a president who was spun into office will be a fertile stomping ground for spin

Ultrafast Magnetism I Jean-Yves Bigot, Wolfgang Hübner, Theo Rasing, Roy Chantrell, 2014-08-05 This volume on Ultrafast Magnetism is a collection of articles presented at the international Ultrafast Magnetization Conference held at the Congress Center in Strasbourg France from October 28th to November 1st 2013 This first conference which is intended to be held every two years received a wonderful attendance and gathered scientists from 27 countries in the field of Femtomagnetism encompassing many theoretical and experimental research subjects related to the spins dynamics in bulk or nanostructured materials The participants appreciated this unique opportunity for discussing new ideas and debating on various physical interpretations of the reported phenomena The format of a single session with many oral contributions as well as extensive

time for poster presentations allowed researchers to have a detailed overview of the field. Importantly, one could sense that in addition to studying fundamental magnetic phenomena, ultrafast magnetism has entered a phase where applied physics and engineering are playing an important role. Several devices are being proposed with exciting R D perspectives in the near future, in particular for magnetic recording, time-resolved magnetic imaging, and spin-polarized transport, therefore establishing connections between various aspects of modern magnetism. Simultaneously, the diversity of techniques and experimental configurations has flourished during the past years, employing in particular X-rays, visible, infra-red, and terahertz radiations. It was also obvious that an important effort is being made for tracking the dynamics of spins and magnetic domains at the nanometer scale, opening the pathway to exciting future developments. The concerted efforts between theoretical and experimental approaches for explaining the dynamical behaviors of angular momentum and energy levels on different classes of magnetic materials are worth pointing out. Finally, it was unanimously recognized that the quality of the scientific oral and poster presentations contributed to bring the conference to a very high international standard.

Self-Assembly, Pattern Formation and Growth Phenomena in Nano-Systems Alexander A. Golovin, Alexander A. Nepomnyashchy, 2006. Nano science and nano technology are rapidly developing scientific and technological areas that deal with physical, chemical, and biological processes that occur on the nano-meter scale, one millionth of a millimeter. Self-organization and pattern formation play crucial roles on nano-scales and promise new effective routes to control various nano-scale processes. This book contains lecture notes written by the lecturers of the NATO Advanced Study Institute Self-Assembly, Pattern Formation and Growth Phenomena in Nano Systems that took place in St Etienne de Tinee, France, in the fall of 2004. They give examples of self-organization phenomena on micro and nano scales, as well as examples of the interplay between phenomena on nano and macro scales, leading to complex behavior in various physical, chemical, and biological systems. They discuss such fascinating nano-scale self-organization phenomena as self-assembly of quantum dots in thin solid films, pattern formation in liquid crystals, caused by light, self-organization of micro-tubules, and molecular motors, as well as basic physical and chemical phenomena that lead to self-assembly of the most important molecule on the basis of which most of living organisms are built: DNA. A review of general features of all pattern-forming systems is also given. The authors of these lecture notes are the leading experts in the field of self-organization, pattern formation, and nonlinear dynamics in non-equilibrium complex systems.
