Changes in Fluxes in Estuaries Keith R. Dyer, Robert Joseph Orth, 1994 *Estimating Postfire Changes in Production and Value of Northern Rocky Mountain-Intermountain Rangelands* David Lawrence Peterson, 1984 A simulation model was developed to estimate postfire changes in the production and value of grazing lands in the Northern Rocky Mountain Intermountain region Ecological information and management decisions were used to simulate expected changes in production and value after wildfire in six major rangeland types permanent forested range ponderosa pine transitory range Douglas fir larch lodgepole pine western white pine mountain grassland sagebrush pinyon juniper and western hardwoods Changes varied widely in quantity and duration among the range types The largest decrease in net value was calculated for mountain grassland 7 acre for a 2 year period The largest increase in net value was calculated for a ponderosa pine sawtimber stand with 100 percent basal area removal 36 acre for a 150 year period The estimates calculated in this study should be useful in land and fire management planning in the Northern Rocky Mountain Intermountain area A Guide to Managing, Restoring, and Conserving Springs in the Western United States, 2001 Crustal Permeability Tom Gleeson, Steve Ingebritsen, 2016-11-30 Permeability is the primary control on fluid flow in the Earth's crust and is key to a surprisingly wide range of geological processes because it controls the advection of heat and solutes and the generation of anomalous pore pressures The practical importance of permeability and the potential for large dynamic changes in permeability is highlighted by ongoing issues associated with hydraulic fracturing for hydrocarbon production fracking enhanced geothermal systems and geologic carbon sequestration Although there are thousands of research papers on crustal permeability this is the first book length treatment This book bridges the historical dichotomy between the hydrogeologic perspective of permeability as a static material property and the perspective of other Earth scientists who have long recognized permeability as a dynamic parameter that changes in response to tectonism fluid production and geochemical reactions *Geological Survey Professional Paper* Geological Survey (U.S.), 1964 **Climate Change in the Arctic** Neloy Khare, 2022-04-07 The Arctic in the polar region the northernmost part of Earth is the hotspot for climate change assessments and the sensitive barometer of global climate variability This book includes the scientific observations in the Arctic region's climate and the results obtained by scientists at the Indian Arctic station Himadri over the past decade Designed and structured to incorporate multi dimensional climate change research output it is a significant contribution toward understanding among other issues the role of persistent organic pollutants and mercury as well as the increase of carbon monoxide during ozone reduction in the Arctic Features include Highlights the achievements of climate change research in the Arctic region Includes case studies of scientists in the Arctic and their significant achievements through the Indian research base Himadri Provides a thorough review of palaeoclimate change studies the impact of climate change on biotic components and the impact of climate change on abiotic components Provides specific details on the study of ozone
