Brown,Mary Louise Fellows,1997-01-01 In the winter of 1996 Steve Forbes publisher heir and presidential candidate captured the American imagination with his proposal for a flat tax But while Mr Forbes claimed that such a tax would level the economic playing field by eliminating countless loopholes and miles of red tape his actual proposal betrayed such claims to fairness by overtaxing workers and undertaxing financial capital In the face of recent proposals for dramatic and far reaching tax reform *Taxing America* takes a critical look at the way the federal government collects its revenue and exposes the bias at the heart of a system which claims to be objective and fair Contrary to traditional tax scholarship these writers argue that an awareness of disability discrimination economic exploitation heterosexism sexism and racism is crucial to any analysis of tax policy Gathering together essays whose topics range from federal housing policy to environmental clean up costs to tax treaty policy making Karen B Brown and Mary Louise Fellows present a philosophy that is as simple as it is radical economic arrangements contribute significantly to the creation of social hierarchies and the perpetuation of discrimination Given this reality Brown and Fellows maintain that the goal of the federal tax law should be social justice and the disruption of discriminatory and exploitative practices *Controversies in Tax Law* Anthony C. debate With contributions from leading mainstream and critical tax scholars this volume takes the first step toward bridging the gap between these differing perspectives on tax law and policy *The International Tax Law Concept of Dividend* Marjaana Helminen, 2017-05-02 The distribution of profits between corporations resident in different jurisdictions gives rise to both significant tax planning opportunities and tax risks As cross border transactions between corporations grow in number and complexity the question of how a profit distribution is classified for corporate income tax purposes becomes increasingly important particularly in the context of issues such as double taxation non taxation and tax neutrality The OECD BEPS project has only increased the relevance This unique work discusses the international tax law rules determining which transactions may be classified and taxed as dividends and how possible classification conflicts may be resolved The author examines the tax classification of various inter corporate transactions including Payments made under dividend stripping arrangements Fictitious profit distributions Economic benefits in the context of transfer pricing Returns on debt equity hybrids Interest payments in thin capitalization situations and distributions following liquidation The analysis of each transaction refers to international tax law Most weight is given to tax treaties and EU tax law including the BEPS development The approaches adopted in different states national tax law are covered by a more general analysis The comprehensive coverage and the practical nature of *The International Tax Law Concept of Dividend* make it an essential acquisition for tax practitioners researchers and tax libraries worldwide *Teacher's Manual to Accompany Tax Policy* Stephen G.
