Taxonomy And Biogeography Of Macquarie Island Seaweeds:

Taxonomy and Biogeography of Macquarie Island Seaweeds R. W. Ricker, 1997? **Taxonomy and Biogeography of Macquarie Island Seaweeds** Robert Wallace Ricker, 1987 Evolutionary Biogeography of the Marine Algae of the North Atlantic David J. Garbary, G. Robin South, 2013-06-29 Algal systematists geologists and evolutionary biologists provide a synthesis of the evolutionary biogeography of red brown and green algae of the North Atlantic Ocean also considering their relationships with species and genera in the Arctic and Pacific Oceans as well as other subtropical and tropical seas The history of the Atlantic Basin and its connections to other ocean basins is treated from the geological paleontological and paleoclimatic perspective This is contrasted with biogeographic analyses of marine animal systems and the role of plant animal interactions in evolution Some of the approaches include traditional systematic studies cladistic analysis the experimental evaluation of environment in establishing distribution limits and the application of molecular biology

Antarctic Seaweeds Iván Gómez, Pirjo Huovinen, 2020-04-29 Seaweeds macroalgae represent the most striking living components in the Antarctic s near shore ecosystems especially across the West Antarctic Peninsula and adjacent islands Due to their abundance their central roles as primary producers and foundation organisms and as sources of diverse metabolically active products seaweed assemblages are fundamental to biogeochemical cycles in Antarctic coastal systems In recent years the imminence of climate change and the direct impacts of human beings which are affecting vast regions of the Antarctic have highlighted the importance of seaweed processes in connection with biodiversity adaptation and interactions in the benthic network Various research groups have been actively involved in the investigation of these topics Many of these research efforts have a long tradition while some newcomers have also recently contributed important new approaches to the study of these organisms benefiting polar science as a whole This book provides an overview of recent advances and insights gleaned over the past several years Focusing on a timely topic and extremely valuable resource it assesses the challenges and outlines future directions in the study of Antarctic seaweeds Fifteenth International Seaweed Symposium Sandra C. Lindstrom, David J. Chapman, 2012-12-06 This volume provides a selection of the most significant papers presented at the 15th International Seaweed Symposium in Valdivia Chile in January 1995 Plenary lectures featured seaweed research and utilization in Chile by Bernab Santelices ethnobotany of seaweeds by Isabella Abbott host virus interactions in marine brown algae by Dieter M ller DNA analysis methods for recognizing species invasion by Annette Coleman and recent developments in manufacturing and marketing carrageenan by Harris Bixler Other highlights include sections on integrated aquaculture using seaweeds and marine invertebrates or fishes and on diseases in seaweeds The remaining papers cover recent advances in floristics and systematics population studies pollution cultivation economics physiology biochemistry cell biology and chemistry and chemical composition of seaweeds particularly species of Gracilariales Gigartinales Gelidiales Laminariales and Fucales Ross Sea Ecology F.M. Faranda, L. Guglielmo, Adrianna Ianora, 2012-12-06 The Antarctic represents the last

of the world's still unexplored continents Since 1985 Italy has sent 10 expeditions to this region three of those have been exclusively devoted to research on the marine ecology of the Ross Sea region This volume presents a global picture of this research It includes contributions on water mass characteristics particulate organic matter and nutrient utilization and physiological aspects of primary production Further topics are zooplankton krill and top predator interactions in relation to physical and biological parameters ecological features of coastal fish communities and the spatio temporal variability of benthic biocenoses

Seaweeds Klaus Lüning, 1991-01-16 A translated thoroughly revised and updated edition of the German work Part I presents the geographic distribution of seaweeds and seagrasses around the world environmental factors floral history and relevant paleoceanographic considerations covered geographically Part II covers seaweed ecophysiology including the relationships of light temperature salinity and other abiotic factors on seaweed distribution as well as biotic factors such as competition herbivory predation and parasitism in order to elucidate the ecophysiological bases for the distribution patterns examined in Part I

The Invertebrates of Macquarie Island Penelope Greenslade, Rieks Van Klinken, 2006 Describes the taxonomy biology and ecology of over 300 invertebrate taxa from Macquarie Island and is also an identification guide

Biology of Polar Benthic Algae Christian Wiencke, 2010-12-20 This work synthesizes the current state of knowledge on the biology of polar benthic marine algae and presents an outlook on their responses to changing environmental conditions in polar regions Topics treated include environment biodiversity and biogeography of micro and macroalgae including an update of the knowledge of the red algal flora of Antarctica It treats the chemical ecology as well as the primary production and ecophysiology of polar benthic algae with new information on the important contribution of benthic microalgae to the productivity in coastal areas

Advances in Marine and Antarctic Science, 2002 Contributed articles

Marine Macroecology Jon D. Witman, Kaustuv Roy, 2009-10-15 Pioneered in the late 1980s the concept of macroecology a framework for studying ecological communities with a focus on patterns and processes revolutionized the field Although this approach has been applied mainly to terrestrial ecosystems there is increasing interest in quantifying macroecological patterns in the sea and understanding the processes that generate them Taking stock of the current work in the field and advocating a research agenda for the decades ahead Marine Macroecology draws together insights and approaches from a diverse group of scientists to show how marine ecology can benefit from the adoption of macroecological approaches Divided into three parts Marine Macroecology first provides an overview of marine diversity patterns and offers case studies of specific habitats and taxonomic groups In the second part contributors focus on process based explanations for marine ecological patterns The third part presents new approaches to understanding processes driving the macroecological patterns in the sea Uniting unique insights from different perspectives with the common goal of identifying and understanding large scale biodiversity patterns Marine Macroecology will inspire the next wave of marine ecologists to approach their research from a macroecological perspective

Biology and biochemistry of host-pathogen interactions in marine brown algae Frithjof Christian Küpper, 2020-10-13 Associations of marine algae with symbiotic or parasitic microorganisms are ubiquitous phenomena known for a long time However there is an almost complete lack of knowledge on details of such interactions The intention of this study is to use the potentials of modern biological and biochemical techniques in order to analyze the reaction of brown algal hosts to the attack by pathogens and epibionts A 3 year field study at different localities on the European Atlantic coast revealed that *Pylaiella littoralis* populations were subject to massive epidemics of the parasites *Eurychasma dicksonii* *Chytridium polysiphoniae* and *Anisolpidium rosenvingei* Laboratory cultures were used to investigate the association of *Eurychasma* and *Chytridium* with brown algal hosts from different taxonomic groups *Eurychasma* has a much broader host range than *Chytridium* comprising members of all brown algal orders investigated and it tolerates a wider range of temperatures than the latter Phylogenetic studies based upon 18 S rRNA genes revealed that *Eurychasma dicksonii* belongs to the Oomycota branching at an ancestral position between terrestrial plant pathogens and free living members of the marine heterotrophic picoplankton *Chytridium polysiphoniae* a fungus appears more closely related to the genera *Rhizophyidium* and *Spizellomyces* *Chytridiomycota* than to other known *Chytridium* species *Chytridium* produces chitin whilst *Eurychasma* does not Early stages of *Eurychasma* infection have a rather modest effect on host physiology The photosynthetic capacity is enhanced suggesting a temporary stimulation of host metabolism for hypertrophic growth *Chytridium* in contrast has an immediate detrimental effect on host photosynthesis which breaks down once a cell is infected leading to the rapid death of infected cells **Biodiversity,**
