War Department,1960 *United States of America AIP, Aeronautical Information Publication* ,1997 Probing the Sky with Radio Waves Chen-Pang Yeang,2013-07-02 By the late nineteenth century engineers and experimental scientists generally knew how radio waves behaved and by 1901 scientists were able to manipulate them to transmit messages across long distances What no one could understand however was why radio waves followed the curvature of the Earth Theorists puzzled over this for nearly twenty years before physicists confirmed the zig zag theory a solution that led to the discovery of a layer in the Earth s upper atmosphere that bounces radio waves earthward the ionosphere In *Probing the Sky with Radio Waves* Chen Pang Yeang documents this monumental discovery and the advances in radio ionospheric propagation research that occurred in its aftermath Yeang illustrates how the discovery of the ionosphere transformed atmospheric science from what had been primarily an observational endeavor into an experimental science It also gave researchers a host of new theories experiments and instruments with which to better understand the atmosphere s constitution the origin of atmospheric electricity and how the sun and geomagnetism shape the Earth s atmosphere This book will be warmly welcomed by scholars of astronomy atmospheric science geoscience military and institutional history and the history and philosophy of science and technology as well as by radio amateurs and electrical engineers interested in historical perspectives on their craft **Technical Manual** United States Department of the Army,1963 *Meteorology for Army Aviation* United States. Department of the Army,1963 **Lights in the Sky** Michael Maunder,2007-11-07 Many lights and other objects in the sky go unrecognised or at least are little understood by those observing them Such things range from the commonplace like

rainbows and meteors to the distinctly unusual like the green flash and ball lightning And there is still a residuum of objects that remain unidentified by the watcher classed generally as UFOs a description which today has connotations of the mysterious even of extraterrestrial visitors The first part of this book is an identification guide very much like the plant identifier sections found in a good gardening or botany book It allows quick and structured identification of known aerial phenomena whether at night or during the day The objects thus found are referenced to the second part of the book The second part gives a full description physical explanation and where relevant notes on observing and photographing the various phenomena Some will need optical aids such as binoculars or telescopes but the main thrust of the book is identification and explanation rather than imaging The final chapter approaches UFOs from a scientific standpoint particularly the way in which human perception and often preconception affects the outcome It does however finish with a short section on extraterrestrial UFOs emphasising the burden of proof aspect and touching on the scientific theories of life on other worlds and the improbability of visitors
