

The Economic Growth vs. Environmental Sustainability Debate: A Comparative Analysis of Policy Impacts in Developing Economies

Contextualization:

The global debate surrounding economic growth and environmental sustainability is one of the most complex and protracted issues in contemporary development policy. As nations seek to increase prosperity and reduce poverty, particularly in the Global South, they are confronted with the reality that traditional paths to economic growth characterized by industrialization, resource extraction, and high energy consumption, are inextricably linked to environmental degradation and climate change. This tension between achieving economic development and preserving environmental integrity is particularly pronounced in developing countries, where policymakers face the challenge of balancing immediate economic needs with long-term environmental goals.

In the wake of international agreements such as the Paris Climate Accord and the Sustainable Development Goals (SDGs), the discourse has shifted toward integrating environmental considerations into development strategies. However, the practical implementation of policies that simultaneously promote economic growth and environmental sustainability remains contentious. While some nations, particularly in the developed world, have championed the notion of "green growth" or "sustainable development," many developing countries argue that stringent environmental regulations hinder their economic potential and trap them in poverty. These divergent views form the crux of the debate and warrant a comprehensive investigation into their theoretical and empirical underpinnings.

The Problem:

The fundamental problem this research seeks to address is the dichotomy between economic growth and environmental sustainability in the policy frameworks of developing countries. Despite the recognition that environmental sustainability is critical for long-term global well-being, the pathways toward harmonizing economic and environmental goals remain highly disputed. Developing nations often argue that rapid industrialization and economic expansion are necessary for poverty alleviation and societal advancement, while environmental advocates emphasize that unchecked growth exacerbates climate change, resource depletion, and environmental inequality. In this context, there is a need to examine how different policy approaches affect both economic and environmental outcomes. Specifically, this research will investigate how the pursuit of economic growth, as seen in countries with more lenient environmental regulations, compares to the strategies adopted by countries that prioritize environmental sustainability. The research will explore whether these approaches can coexist or whether
