Rees, 2008-04-15 Today construction industry is being asked more and more to protect the quality of the countryside and to help enhance our natural environment The industry is subject to a complex and wide ranging regulatory framework it now needs to understand its responsibilities and take them seriously Paul Rees provides here an authoritative guide outlining wildlife and nature conservation law in the UK including our European and international commitments and giving clear explanations to a potentially costly area of law in a style accessible to the non legal market This comprehensive manual offers information and guidance for building surveyors environmental managers engineers and planners on the legal and planning issues around biodiversity nature conservation and construction how ecosystems work and why certain species and habitats need protection where to go for the relevant legislation and appropriate organisations for help and advice UK and European case law demonstrates how the law has functioned in particular instances and case studies illustrate how companies have adapted to fulfil their legal obligations These are key features of the book and provide information on important legal precedents as well as demonstrating current industry best practice      British Moths and Butterflies Chris

Kranz-Baltensperger, Christian Kropf, 2025-01-03 To avoid any misunderstandings this book is not about spiders as pets but about those spiders that live in our houses and apartments as lodgers Mostly ignored and sometimes wrongly feared there is hardly a building in the world that does not harbour some species of spider What is fascinating is that we always find the same species These spiders must have special adaptations because the humidity in our homes is far too low they are too clean and the food supply is usually scarce However those spiders that have made the leap into our four walls are rewarded with a worldwide right to stay This in turn is due to people's eagerness to trade and migrate worldwide Humans tirelessly transport their belongings and an endless stream of goods around the world in sacks parcels and containers And our domestic spiders as stowaways travel just as tirelessly and unrecognized It is therefore possible to present domestic spiders found throughout the world in a single book as they are essentially the same everywhere The 50 or so most important species and species groups are presented here in a generally understandable way with a detailed profile photos and distribution maps The authors of this book are experts who work at museums universities and in administration in Europe and North America They are not only recognized scientists but have also been avowed spider fans for decades      *On European Spiders.*
