SPIN 2002 Yousef I. Makdisi, Alfredo U. Luccio, William W. MacKay, 2003-09-04 The SPIN 2002 Proceedings describe the recent advances in the field of spin physics The topics cover research in high energy and nuclear physics and the study of the nuclear spin structure The symposium also covers advances in polarized proton and electron acceleration and storage as well as polarized ion sources and targets The first measurement of spin physics observables in pp collisions at center of mass energy of 200 GeV was announced at this symposium Spin 2004 - Proceedings Of The 16th International Spin Physics Symposium And Workshop On Polarized Electron Sources And Polarimeters (With Cd-rom) Franco Bradamante, Andrea Bressan, Anna Martin, Kurt Aulenbacher, 2005-08-02 This comprehensive volume covers the most recent advances in the field of spin physics including the latest research in high energy and nuclear physics and the study of nuclear spin structure The comprehensive coverage also includes polarized proton and electron acceleration and storage as well as polarized ion sources and targets Many significant new results and achievements on the different topics considered at the symposium are presented in this book for the first time

Nuclear Physics with Polarized Particles Hans Paetz gen. Schieck, 2011-11-01 The measurement of spin polarization observables in reactions of nuclei and particles is of great utility and advantage when the effects of single spin sub states are to be investigated Indeed the unpolarized differential cross section encompasses the averaging over the spin states of the particles and thus loses details of the interaction process This introductory text combines in a single volume course based lecture notes on spin physics and on polarized ion sources with the aim of providing a concise yet self contained starting point for newcomers to the field as well as for lecturers in search of suitable material for their courses and seminars A significant part of the book is devoted to introducing the formal theory a description of polarization and of nuclear reactions with polarized particles The remainder of the text describes the physical basis of methods and devices necessary to perform experiments with polarized particles and to measure polarization and polarization effects in nuclear reactions The book concludes with a brief review of modern applications in medicine and fusion energy research For reasons of conciseness and of the pedagogical aims of this volume examples are mainly taken from low energy installations such as tandem Van de Graaff laboratories although the emphasis of present research is shifting to medium and high energy nuclear physics Consequently this volume is restricted to describing non relativistic processes and focuses on the energy range from astrophysical energies a few keV to tens of MeV It is further restricted to polarimetry of hadronic particles

Polarized Sources, Targets and Polarimetry Giuseppe Ciullo, Marco Contalbrigo, Paolo Lenisa, 2011 This book collects the most recent experimental results new ideas and prototypes in the field of nuclear gaseous and solid polarized targets and polarimetry It contains the contribution of the biennial meeting on the topics of Polarized Sources Targets and Polarimetry Therefore includes the most recent developments and performances in the field and new

proposals The contributing authors are the experts of the field The topics covered include Polarized Electron Sources Polarized Proton and Deuterium Sources Polarized Internal Targets Polarized ^3He Ion Sources and Targets Polarimetry e p d at Low and High Energy Polarized antiprotons Polarized Solid Targets **Polarized Beam Dynamics and Instrumentation in Particle Accelerators** François Méot, Haixin Huang, Vadim Ptitsyn, Fanglei Lin, 2023-03-21 This Open Access book is drawn from lectures dispensed at the U S Particle Accelerator School USPAS Summer 2021 Spin Class by experts in the field It is an introduction to the dynamics of spin in charged particle accelerators and to the accelerator components and spin manipulation techniques including helical snakes and spin rotators which enable and allow preserving beam polarization It is aimed at graduate students or upper division undergraduate students with an interest in this multi disciplinary field which includes the future electron ion collider at the Brookhaven National Laboratory high energy lepton and proton collider projects and other electric dipole moment search storage rings It is also aimed at physicists or engineers working in accelerator related fields who wish to familiarize themselves with spin dynamics and polarized beam concepts tools components and purposes This is an open access book *PSTP 2007* Ahovi Kponou, Yousef Makdisi, Anatoli Zelenski, 2008-02-25 Upton New York 10 14 September 2007 **Nucleon Structure at Large Bjorken X** Claude Bourrely, Zein-Eddine Meziani, Jacques Soffer, 2005-03-03 Marseille France 26 28 July 2004 *Increasing the AGS Polarization* A.D. Krisch, A.M.T. Lin, T. Roser, 2003-06-11 The Ann Arbor Workshop on Increasing the AGS Polarization discusses the surprising spin effects discovered at lower energy accelerators making the new multi hundred GeV RHIC polarized proton collider especially important The four Siberian snakes in the two RHIC rings successfully preserved most polarization during acceleration and storage RHIC s main problem was the low polarization injected from the AGS The Workshop determined a quick and practical plan for increasing the AGS polarization by using three techniques to overcome the three types of depolarizing resonances **Spin Physics** Don G. Crabb, 2009-08-25 The topics covered in the conference ranged from the physics that can be done with polarized beams of particles protons electrons gamma rays etc to the techniques and instrumentation necessary to achieve this Topics included nucleon structure measurements from where does the spin of the proton and neutron come the acceleration storage and polarization of particle beams and the polarized targets and sources necessary for mounting the experiments *Scientific and Technical Aerospace Reports* ,1993 *Jahresbericht* ,2004 **SPIN 2004 00** ,2005 **Perspectives in Hadronic Physics** Sigfrido Boffi, Claudio Ciofi Degli Atti, Mauro M. Giannini, 2012-12-06 This volume contains the invited and contributed papers presented at the Fourth International Conference on Perspectives in Hadronic Physics and sent to the Editors within the deadline The Conference was held at the Abdus Salam International Centre for Theoretical Physics ICTP Trieste Italy from May 12th to 16th 2003 and was attended by about 100 scientists from 20 countries The series of Conferences on Perspectives on Hadronic Physics takes place every two years since 1997 and follows the seven Workshops on Perspectives in Nuclear Physics at Intermediate Energies organized

every two years at ICTP since 1983 The aim of these Conferences is to discuss the status of the art concerning the experimental and theoretical investigations of hadronic systems from nucleons to nuclei and dense nuclear matter in terms of the relevant underlying degrees of freedom For such a reason the Fourth Conference has been focused on those experimental and theoretical topics which have been in the last few years the object of intensive investigations viz the various approaches employed to describe the structure of hadrons in terms of QCD and QCD inspired models the recent developments in the treatment of the properties and propagations of hadronic states in the medium the relevant progress done in the solution of the few and many hadron problems the recent results in the experimental investigation of dense hadronic matter and last but not least the physics programs of existing Laboratories and the suggested projects for new Facilities

Challenges And Goals For Accelerators In The Xxi Century Oliver Bruning, Stephen Myers, 2016-02-26 The past 100 years of accelerator based research have led the field from first insights into the structure of atoms to the development and confirmation of the Standard Model of physics Accelerators have been a key tool in developing our understanding of the elementary particles and the forces that govern their interactions This book describes the past 100 years of accelerator development with a special focus on the technological advancements in the field the connection of the various accelerator projects to key developments and discoveries in the Standard Model how accelerator technologies open the door to other applications in medicine and industry and finally presents an outlook of future accelerator projects for the coming decades

12th International Symposium on High-Energy Spin Physics, Amsterdam, The Netherlands, 10-14 September 1996, 1997

High Energy Spin Physics Werner Meyer, Erhard Steffens, Werner Thiel, 2011-11-22 The 9th International Symposium on High Energy Spin Physics was held in Bonn 6-15 September 1990 with the Physikalisches Institut der Universität Bonn as the host The symposium was preceded by a series of four workshops on polarized electron sources and electron spin polarimeters Siberian snakes and polarization in circular machines polarized gas targets polarized solid targets 160 participants from 11 countries among them many young physicists came together and discussed mainly technological spin problems The high level of participation indicates that workshops combined with the symposium are attractive not only for people who plan and prepare polarized beams and targets but also for experimentalists and theorists dealing with high energy spin physics At these workshops many very interesting and important recent results were presented and reviewed Thus we hope these proceedings will be valuable to many researchers in these fields The Organizing Committee would like to thank all participants in particular the speakers and the session chairmen for their contributions to the workshops and for helping to create a lively and stimulating atmosphere Special thanks go to the organizers W Haeberli S Mango E Reichert E Steffens W Thiel U Wienands for their cooperation in preparing and running these workshops We gratefully acknowledge the enthusiastic help of the members of our institute in preparing and running the conference and the workshops especially Mrs D FaSbender Mrs E Wendorf Mrs J

Wetzel and Dr U Idschok **PESP 2008** Yousef I. Makdisi, Alfredo U. Luccio, William W. MacKay, 2009 *Polarized Electron/Polarized Photon Physics* Hans Kleinpoppen, W.R. Newell, 2013-06-20 The EPSRC Engineering and Physical Science Research Committee of the U K suggested two Workshops York University 22-23 September 1993 and 15-16 April 1994 for possible development of polarized electron photon physics as targeted areas of research. The remit of these meetings included identifying research groups and their activities in polarized electron polarized photon physics, listing relevant existing facilities, particularly electron spin sources and polarimeters, possible joint projects between research groups in the U K, recognizing future needs of projects for research of the highest scientific merit and referring to international comparisons of these research activities. Although very diverse but interconnected, the areas of research presented at the Workshops embrace atomic, molecular, surface and solid state physics. In more detail, these areas covered electron spin correlations and photon polarization correlations in atomic and molecular collisions and photoionization, electron spin effects in scanning tunneling microscopy, surface and interface magnetism from X-ray scattering and polarized Auger electrons, including analysis of domain structures in solids and surfaces, polarized electrons from multiphoton ionization, quasi-atomic effects in solid state physics, dichroism in molecular and surface processes, Faraday rotation and high field magneto-optics and polarization effects in simultaneous higher order electron-photon excitations. It is obvious from the spectrum of research fields presented at the Workshops that physicists of primarily two communities, namely those studying electron and photon spin interactions with gaseous atomic and molecular targets and those using condensed matter targets for their studies, interacted very closely with each other. *Polarized Electron Source Developments*, 1990. Presently only two methods of producing beams of polarized electrons for injection into linear accelerators are in use. Each of these methods uses optical pumping by circularly polarized light to produce electron polarization. In one case, electron polarization is established in metastable helium atoms, while in the other case, the polarized electrons are produced in the conduction band of appropriate semiconductors. The polarized electrons are liberated from the helium metastable by chemi-ionization and from the semiconductors by lowering the work function at the surface of the material. Developments with each of these sources since the 1988 Spin Physics Conference are reviewed and the prospects for further improvements discussed.
