Rosen, 2018-01-01 A fish that walks on land a frog that makes its own sunscreen and an insect that can become invisible Whether to avoid predators to stalk prey or to withstand extreme temperatures Earth's creatures have evolved some outrageous features and tricks to ensure survival For example did you know that the geoduck nope it's not a duck it's a clam can live as long as 160 years And that the aye aye a nocturnal primate uses echolocation and a long spindly finger to find and dig up food Or that in its deep ocean habitat the vampire squid uses bioluminescence to startle predators These are among the many animals that show evolution and adaptation at work *Spider Behaviour* Marie Elisabeth Herberstein, 2011-01-27

Spiders are often underestimated as suitable behavioural models because of the general belief that due to their small brains their behaviour is innate and mostly invariable. Challenging this assumption, this fascinating book shows that rather than having a limited behavioural repertoire, spiders show surprising cognitive abilities, changing their behaviour to suit their situational needs. The team of authors unravels the considerable intra-specific as well as intra-individual variability and plasticity in different behaviours ranging from foraging and web building to communication and courtship. An introductory chapter on spider biology, systematics and evolution provides the reader with the necessary background information to understand the discussed behaviours and helps to place them into an evolutionary context. Highlighting an under-explored area of behaviour, this book will provide new ideas for behavioural researchers and students unfamiliar with spiders as well as a valuable resource for those already working in this intriguing field.

Bounded on the east by the crest of the Cascade Range and on the west by the lofty east flank of the Olympic Mountains, Puget Sound terrain includes every imaginable topographic variety. This thoughtful and eloquent natural history of the Puget Sound region begins with a discussion of how the ice ages and vulcanism shaped the land and then examines the natural attributes of the region: flora and fauna, climate, special habitats, life histories of key organisms as they pertain to the functioning ecosystem. Mankind's effects upon the natural environment are a pervasive theme of the book. Kruckeberg looks at both positive and negative aspects of human interaction with nature in the Puget basin.
