Thron,2012-12-06 The idea for this treatise on the radiological anatomy of superficial and deep spinal cord vasculature evolved from daily routine neuroradiological work This was also the reason for subdividing the monograph into a postmortem anatomical and a clinical part The actual importance of a clear conception of radio anatomic fundamentals was made clear by many clinical conferences with neurologists neurosurgeons and orthopedists where a lack of knowledge about medullary syndromes of suspected vascular origin became evident Also among neuroradiologists there is still widespread uncertainty in the interpretation of myelograms and angiographies in such cases A study of the spinal cord s angioarchitecture is all the more justified and necessary considering the vast number of descriptions of cerebro vascular anatomy and pathology The clinical challenge posed by patients suffering from partial or complete transverse spinal lesions has grown due to new diagnostic and therapeutic approaches Myelography using water soluble contrast media X ray computed tomography magnetic resonance imaging and spinal angiography today allow and require both earlier and topographically and pathogenetically more exact classification of diseases of the spinal cord and its surrounding structures Due to progress in microneurosurgery and interventional neuroradiology even intramedullary lesions have become more and more accessible and treatable Therefore this monograph mainly addresses those concerned with invasive therapeutic techniques and who are familiar with the interpretation of radio anatomic findings A comprehensive description of medullary vascular syndromes would be beyond the scope of this treatise
