

GEORGE KIMBALL PLOCHMANN. *Professor Henle on the four figures of syllogism. Philosophy of science*, vol. 19 (1952), pp. 333-341.

This is a commentary on Paul Henle's XV 75(16). Its main contentions are (1) that Aristotle defines the syllogistic figures not as configurations of terms, but in terms of the relative extensions of terms, and "if a middle is either wider than one extreme and narrower than another, or narrower than both, a fourth relation is impossible, unless you make the predicate of the conclusion narrower than the subject. But Aristotle would balk at this because a predicate is, in the *Prior Analytics*, always wider than the subject" (p. 340); and (2) that modal logic is neither the central concern of the *Prior Analytics* nor an important adjunct of Aristotle's metaphysical doctrine. Both contentions are well argued.

HENRY W. JOHNSTON, Jr.

WITOLD MICHAŁOWSKI. *Zagadnienie nazw pustych w sylogistyce Arystotelesa w świetle "ontologii" Leśniewskiego* (Das Problem der leeren Namen in der Syllogistik im Lichte der "Ontologie" von Leśniewski). *Roczniki filozoficzne*, vol. 5 no. 2 (1957-8), pp. 65-95, 227.

The author's main problem is to re-interpret the syllogistic constants as constants of Leśniewski's ontology on the presupposition that non-referential names have been made legitimate in the logic of Aristotle. He begins by giving a very sketchy characterization of Leśniewski's systems and then goes on to comment on the treatment of syllogistic by Kotarbiński in his 4021, and by Śłupecki in his XIII 166(1), and his *S. Leśniewski's calculus of names* (*Studia logica*, vol. 3 (1955), pp. 7-76). Finally the author proposes his own system of syllogistic, S4, which is based on two definitions, Df. 1 $S \dot{\iota} P = - S \varepsilon P$ and Df. 2 $S \circ P = - S \alpha P$; and on two axioms, A1 $(M \alpha P \cdot S \alpha M) \supset S \alpha P$ and A2 $(M \varepsilon P \cdot S \alpha M) \supset S \varepsilon P$. ' $S \alpha P$ ' and ' $S \varepsilon P$ ' are primitive functions. In ontology ' $\Pi x(x \varepsilon S \supset x \varepsilon P)$ ' and ' $\Pi x(x \varepsilon S \supset - x \varepsilon P)$ ' could serve as their respective *definientia*. ' $S \varepsilon P = P \varepsilon S$ ' and ' $S \dot{\iota} P = P \dot{\iota} S$ ' are accepted without a proof, and described as auxiliary theses. The laws of subalternation, contrariety, subcontrariety, conversion with limitation, and the moods (Barbari, Celarent, Cesaro, Camestrop, Darapti, Felapton, Bramantip, Camenop, and Fesapo) are not derivable in S4. This the author tries to establish by rejecting ' $S \alpha P \supset S \dot{\iota} P$ ' axiomatically and by applying a rule of rejection which allows us, so we are told, to reject an expression of S4 if it is derivable from a set of assumptions of which at least one is a rejected expression. The author does not seem to notice that this is not a universally valid rule. Among other slips he wrongly attributes existential import to Leśniewski's particular quantifier and, surprisingly, gives ' $S \alpha P \supset S \dot{\iota} P$ ' as an interpretation of ' $\Pi x(fx) \supset \Sigma x(fx)$ '.

ANDRZEJ GRZEGORCZYK. *The systems of Leśniewski in relation to contemporary logical research*. English, with Polish and Russian summaries. *Studia logica*, vol. 3 (1955), pp. 77-97.

This very lucid paper summarizes Leśniewski's logical achievements, and attempts to explain why contemporary logical research has very largely passed him by. Briefly, the answer suggested is that Leśniewski made valuable discoveries in 1917-1927 without then publishing them, and then went doggedly on perfecting his results at a time when mathematicians had passed on to other concerns which he did not share. It was his habit, too, to spell out detailed solutions to problems about which mathematicians were content to know (and could easily establish) that they were in principle soluble. His formalisations were complicated by their rigorous exclusion of features that were philosophically uninterpretable (Grzegorzczuk cites the "zero element" in mereology); the mathematician is content to admit such features if they do no formal harm and make for smoother systems.

Grzegorzczuk establishes some interesting equivalences between Leśniewskian

Philosophy Don Garrett, 2018-08-02 Spinoza's guiding commitment to the thesis that nothing exists or occurs outside of the scope of nature and its necessary laws makes him one of the great seventeenth century exemplars of both philosophical naturalism and explanatory rationalism Nature and Necessity in Spinoza's Philosophy brings together for the first time eighteen of Don Garrett's articles on Spinoza's philosophy ranging over the fields of metaphysics epistemology philosophy of mind ethics and political philosophy Taken together these influential articles provide a comprehensive interpretation of that philosophy including Spinoza's theories of substance thought and extension causation truth knowledge individuation representation consciousness conatus teleology emotion freedom responsibility virtue contract the state and eternity and the deep interrelations among them Each article aims to resolve significant problems in the understanding of Spinoza's philosophy in such a way as to make evident both his reasons for his views and the enduring value of his ideas At the same time Garrett's articles elucidate the relations between his philosophy and those of predecessors and contemporaries like Aristotle Hobbes Descartes Locke and Leibniz Lastly the volume offers important and substantial replies to leading critics on four crucial topics the necessary existence of God Nature substance monism necessitarianism and consciousness *The Philosophy of Spinoza* George Stuart Fullerton, 1894 *The Philosophy of Spinoza as Contained in the First, Second, and Fifth Parts of the Ethics and in Extracts from the Third and Fourth* George Stuart Fullerton, Benedictus De Spinoza, 2016-05-22 This work has been selected by scholars as being culturally important and is part of the knowledge base of civilization as we know it This work was reproduced from the original artifact and remains as true to the original work as possible Therefore you will see the original copyright references library stamps as most of these works have been housed in our most important libraries around the world and other notations in the work This work is in the public domain in the United States of America and possibly other nations Within the United States you may freely copy and distribute this work as no entity individual or corporate has a copyright on the body of the work As a reproduction of a historical artifact this work may contain missing or blurred pages poor pictures errant marks etc Scholars believe and we concur that this work is important enough to be preserved reproduced and made generally available to the public We appreciate your support of the preservation process and thank you for being an important part of keeping this knowledge alive and relevant *Naturalistic Explanation in Spinoza's Ethics* Harvey Shoolman, 2019 Spinoza was the most uncompromising naturalist in the history of philosophy determined to provide a comprehensive system of ultimate reasons for the existence of any object or event by relating that object or event to the infinitely complex structure of Nature itself Unprecedented in the detail of its philosophical analysis Naturalistic Explanation in Spinoza's Ethics Being Mind Full of Nature examines explanatory naturalism in Spinoza's mature metaphysical text the Ethics Rooted in intellectual history yet committed to contemporary application Harvey Shoolman's fresh interpretation of Spinoza's theory of mind and action highlights the originality of Spinoza's vision including his account of the existence of consciousness in Nature and the way that conscious awareness

relates to the complex physical structures that express cognitive properties Shoolman provides a clear interpretation of Spinoza's doctrine of the Eternity of the Human Mind. He also gives insight into the way Spinoza understood both mathematics and physical science in purely naturalistic terms as examples of embodied rational practice, a view that is completely at odds with modern conceptions of what scientists do. Furthermore, the book interprets social and political phenomena as rational extensions of any naturalistic theory of mind. Shoolman presents us with a more subtle and potent Spinoza whose naturalistic vision privileges the rational and the deductive over the empirical and the inductive.
