Teaching and Researching: Speaking Rebecca Hughes, 2013-11-04 Speaking is a dynamic interpersonal process and one that strongly influences how we are perceived by others in a range of formal and everyday contexts Despite this speaking is often researched and taught as if it is simply writing delivered in a different mode In Teaching and Researching Speaking Rebecca Hughes suggests that we have less understanding than we might of important meaning making aspects of speech such as prosody gaze affect and the ways speakers collaborate and negotiate with one another in interaction This thoroughly revised and updated second edition looks to the future of the field offering A new chapter on assessment discussing high stakes oral language testing contexts such as immigration New material considering access to spoken data via the worldwide web and new technologies that allow neurolinguistic insights formerly hidden from view Summaries and case studies to help the reader understand how to approach researching speaking and encourages practitioners to question the models of speaking that they are using in their classrooms Reviewing materials and assessment practices in the light of current knowledge about spoken language and highlighting areas for new work and collaboration between researchers and practitioners this book will be a valuable resource for anyone involved in language teaching **Literature, Spoken**

Spoken Corpus Linguistics Svenja Adolphs, Ronald Carter, 2013-07-18 In this book Adolphs and Carter explore key approaches to work in spoken corpus linguistics The book discusses some of the pioneering challenges faced in designing building and utilising insights from the analysis of spoken corpora arguing that even though writing is heavily privileged in corpus research the spoken language can reveal patterns of language use that are both different and distinctive and that this has important implications for the way in which language is described for the study of human communication and for the field of applied linguistics as a whole Spoken Corpus Linguistics is divided into two main parts The first part sets the scene by discussing traditional and new approaches to monomodal spoken corpus analysis with a focus on discourse organisation and conversational interaction and with particular attention to forms of language such as discourse markers and multi word units areas of language not conventionally described but which are argued to be of importance to spoken language description and to spoken language learning and teaching research within the field of applied linguistics The second part of the book moves into the multimodal domain and focuses on alignments between language and gesture in a spoken corpus with particular reference to gestural movements of the head and the hand and to the different ways in which prosody might be used to enhance communication A brief final chapter discusses new developments in the area of spoken corpus research including the relationship between language and context emerging research methods as well as discussing possible shifts in scope and emphasis in spoken corpus research in the future

Listening to Spoken English Gillian Brown, 2017-09-19 For those who are familiar with the first edition it will be convenient to have some indication of where the main changes lie Chapter one has been largely rewritten to give an outline of current approaches to a model of comprehension of spoken language Chapter two has a new initial section but otherwise remains as it was Chapter three incorporates a new section on pause and how this interacts with rhythm and rather more on the function of stress Chapter

four has an extended initial section but otherwise remains largely as it was Chapter five on intonation contains several sections which have been rewritten to varying extents Chapter six of the first edition has disappeared in 1977 very little work had been published on fillers and it seemed worthwhile incorporating a chapter that sat rather oddly with the phonetic phonological interests of the rest of the book Not that there is a great industry of descriptions of the forms and functions of these and similar phenomena there seems no reason to retain this early but admittedly primitive account The chapter on paralinguistic vocal features now chapter six has some rewriting in the early part but considerable rewriting in the last sections The final chapter on teaching listening comprehension has grown greatly in length It still incorporates some material from the original chapter but most of it is completely rewritten

Modelling Performance in Tests of Spoken Language Barry O'Sullivan, 2008 When we use a language we are always aware of our audience This awareness is reflected for example in changes to the way we speak to the same person in different contexts or to different people in the same context This book explores the way in which test takers language can change in test events depending on either real or perceived similarities or differences between themselves and their interlocutors The series of five studies reported are designed to explore aspects of test taker performance on tests of speaking and in doing so provide evidence in support of a proposed model of speaking test performance Though the studies focus primarily on the effect on test taker performance of characteristics associated with their interlocutor they also provide empirical evidence of interactions between the factors There are clear implications from the findings for all of those people involved in language testing and in researching spoken language

Language, Corpora, and Technology in Applied Linguistics Muhammad Afzaal, Swaleha Bano Naqvi, Geng Qiang, 2023-11-27 As culture and society has become more digitalized especially when computer science and digital technologies have entered a new era in the twenty first century translation studies began to utilize a wide range of tools to enhance its reading of texts and contexts without which translation both as a practice and as a theorization could barely persist It has become more apparent that two extreme poles between macro and micro visions have formed the diversified terrains of translation studies On the one hand technologies like NLP topic modeling network analysis and data visualization make distant reading become possible thus allowing us to have a paradigmatic view of how human s ideas beliefs values knowledge and even emotions have spread in some patterns across cultural geographical and language divides in world history On the other hand corpus methods such as the use of keywords collocates and concordance lines changed the way by which texts were closely read from linear to vertical With microscope like corpus tools we could go deeper into the texture for perception of nuanced meaning While considering a fact that translation is seldom mono modal in conveying meaning we have to reconceptualize context as a multimodal environment where audio visual and other resources interact to convey and make meaning With regard to the fast development of digital technology translation studies take an active role in gaining an enhanced capability in promoting transformation Complexity has been favored in terms of theoretical framework and methodology New questions are asked old ones revisited with novel tools but more areas wait to be cultivated and more questions to be approached by combining quantitative and qualitative methods We could ask if digital technologies would bring new innovation to study of translation history a heavily walled land for traditional humanists who tend to repeat so what to question the less significance of data driven studies The idea of high quality machine translation has become so realistic in today s market that translation educators have to face the shock wave it brought to translation

learners and practitioners and rethink the relation between human translators and algorithms Machine translation assisted communication could help remove boundaries for better communication but at the same time it also creates conflicts and leads to confrontation Thus understood it is imperative to give a concerned attention to digital translation studies that is to study translation by resorting to and drawing on the digital technologies This Research Topic is intended to promote current directions and new developments in cross disciplinary critical discourse research We welcome papers which from a critical analytical perspective deal with contemporary social scientific political economic or professional discourses and genres Papers addressing the highlighted topics are especially welcome In giving weight to these topics we wish to call to attention some of the most pressing problems currently facing the world

Language and Literacy (RLE Linguistics C: Applied Linguistics) Michael Stubbs, 2014-01-10 Despite a vast amount of study literacy is still a very confused topic which requires the integration of findings from different areas Reading and writing are psychological skills but they are also linguistic skills since people read and write meaningful language and social skills since written language serves particular functions in different societies In this book Michael Stubbs provides a basis for a sociolinguistic theory of literacy He believes that a systematic theory of literacy must be based on an understanding of a number of factors such as the relationship between written and spoken language including how English spelling works and how it is related to spoken English Also of paramount importance are the social educational and technological pressures on written language which are particularly powerful in the case of an international language like English the social and communicative functions which written language serves largely administrative and intellectual functions and the variability of spoken language and the relative uniformity of written language The book also discusses the arguments behind deprivation theory as an explanation of educational failure Reading failure is not well understood but the author stresses that a vital element is the attitude of teachers towards the child's language He emphasizes that it is important that teachers should understand as much as possible about the relationship between written language and the child's spoken language Such understanding he argues can only increase tolerance of regional social and ethnic diversity in language
