The Guy Smith Interviews Rationale For Concepts In Soil Taxonomy Smss Technical Monograph No 11:

Advances in Soil Science, 2012-12-06 Soil is formed from physical and chemical weathering of rocks processes described historically because they involve eons of time by glaciation and by wind and water transport of soil materials later deposited in deltas and loessial planes Soil undergoes further transformations over time and provides a habitat for biological life and a base for the development of civilizations Soil is dynamic always changing as a result of the forces of nature and particularly by human influences The soil has been studied as long as history has been documented Numerous references to soil are found in historical writings such as Aristotle 384 322 B c Theophrastus 372 286 B c Cato the Elder 234 149 B C and Varro 116 27 B c Some of the earliest historical references have to do with erosional forces of wind and water The study of soils today has taken on increased importance because a rapidly expanding population is placing demands on the soil never before experienced This has led to an increase in land degradation and desertification Desertification is largely synonymous with land degradation but in an arid land context Deterioration of soil resources is largely human induced Poverty ignorance and greed are the indirect causes of desertification The direct cause is mismanagement of the land by practices such as overgrazing tree removal improper tillage poorly designed and managed water distribution systems and overexploitation

Ecosystem Services and Tropical Soils of India D.K. Pal,2019-08-23 This book highlights ecosystem services of Indian tropical soils driven by soil properties Soils are complex and important biomaterials and have an outstanding role in providing ecosystem services to mankind The tropical soils have been traditionally and generally considered as either agriculturally poor or virtually useless by many This book will discuss the difficulties encountered in managing Indian tropical soils in order to sustain their productivity Some unique soil properties are yet to be linked explicitly to soil ecosystem

services and soil care needs to be a constant research endeavour in the Indian tropical environment This book highlights the new and unique soil knowledge base necessary to close the gap between food production and future population growth

Simple Methods to Study Pedology and Edaphology of Indian Tropical Soils D. K. Pal, 2018-05-23 This book discusses how research efforts have established an organic link between pedology and edaphology of five pedogenetically important soil orders as Alfisols Mollisols Ultisols Vertisols and Inceptisols of tropical Indian environments The book highlights how this new knowledge was gained when research efforts were complemented by high resolution mineralogical micro morphological and age control tools This advancement in basic and fundamental knowledge on Indian tropical soils makes it possible to develop several index soil properties as simple methods to study their pedology and edaphology More than one third of the world's soils are tropical soils Thus the recent advances in developing simple and ingenious methods to study pedology and edaphology of Indian tropical soils may also be adopted by both graduate students and young soil researchers to aid in the development of a national soil information system to enhance crop productivity and maintain soil health in the 21st century
