Observational Constraints on the Influence of Active Galactic Nuclei on the Evolution of Galaxies Christopher Mark Harrison, 2016-01-20 This prize winning Ph D thesis by Chris Harrison adopts a multi faceted approach to address the lack of decisive observational evidence utilising large observational data sets from several world leading telescopes Developing several novel observational techniques Harrison demonstrated that energetic winds driven by Active Galactic Nuclei AGN are found in a large number of galaxies with properties in agreement with model predictions One of the key unsolved problems in astrophysics is understanding the influence of AGN the sites of growing supermassive black holes on the evolution of galaxies Leading theoretical models predict that AGN drive energetic winds into galaxies regulating the formation of stars However until now we have lacked the decisive observational evidence to confirm or refute these key predictions Careful selection of targets allowed Harrison to reliably place these detailed observations into the context of the overall galaxy population However in disagreement with the model predictions Harrison showed that AGN have little global effect on star formation in galaxies Theoretical models are now left with the challenge of explaining these results

Handbook of CCD Astronomy Steve B. Astronomy with a Home Computer Neale Monks,2005-03-03 Here is a one volume guide to just about everything computer related for amateur astronomers Today s amateur astronomy is inextricably linked to personal computers Computer controlled go to telescopes are inexpensive CCD and webcam imaging make intensive use of the technology for capturing and processing images Planetarium software provides information and an easy interface for telescopes The Internet offers links to other astronomers information and software The list goes on and on Find out here how to choose the best planetarium program are commercial versions really better than freeware Learn how to optimise a go to telescope or connect it to a lap top Discover how to choose the best webcam and use it with your telescope Create a mosaic of the Moon or high resolution images of the planets Astronomy with a Home Computer is designed for every amateur astronomer who owns a home computer whether it is running Microsoft Windows Mac O S or Linux It doesn t matter what kind of telescope you own either a small refractor is just as useful as a big go to SCT for most of the projects in this book **On Not Looking** Frances Guerin,2015-01-09 On Not Looking The Paradox of Contemporary Visual Culture focuses on the image and our relationship to it as a site of not looking The collection demonstrates that even though we live in an image saturated culture many images do not look at what they claim viewers often do not look at the images and in other cases we are encouraged by the context of exhibition not to look at images Contributors discuss an array of images photographs films videos press images digital images paintings sculptures and drawings from everyday life museums and galleries and institutional contexts such as the press and political arena The themes discussed include politics of institutional exhibition and perception of images censored repressed and banned images transformations to practices of not looking as a result of new media interventions images in history and memory not looking at images of bodies and cultures on the margins responses to images of trauma and embodied vision **Brown Dwarf Companions to Young Solar an** Stanimir Metchev,2006-02 We present results from an adaptive optics survey conducted with the Palomar and Keck telescopes over 3 years which measured the frequency of stellar and sub stellar companions to Sun like stars The survey sample contains 266 stars in the 3 10000 million year age range at heliocentric distances between 8 and 200 parsecs and with spectral types between F5 K5 A sub sample of 101 stars between 3 500 million years old were observed in deep exposures with a coronagraph to search for faint sub stellar companions A total of 288 candidate companions were discovered around the sample stars which were re imaged at subsequent epochs to determine physical association with the candidate host stars by checking for common proper motion Benefitting from a highly accurate astrometric calibration of the observations we were able to successfully apply the common proper motion test in the majority of the cases including stars with proper motions as small as 20 milli arcseconds year The results from the survey include the discovery of three new brown dwarf companions HD 49197B HD 203030B and ScoPMS 214B 43 new stellar binaries and a triple system The physical association of an additional a priori suspected candidate sub

stellar companion to the star HD 1348 is astrometrically confirmed. The newly discovered and confirmed young brown dwarf companions span a range of spectral types between M5 and T0.5 and will be of prime significance for constraining evolutionary models of young brown dwarfs and extra solar planets. Based on the 3 new detections of sub stellar companions in the 101 star sub sample and following a careful estimate of the survey incompleteness a Bayesian statistical analysis shows that the frequency of 0.012-0.072 solar mass brown dwarfs in 30-1600 AU orbits around young solar analogs is 6.8% - 4.9% - 8.3% 2 sigma limits. While this is a factor of 3 lower than the frequency of stellar companions to G dwarfs in the same orbital range it is significantly higher than the frequency of brown dwarfs in 0-3 AU orbits discovered through precision radial velocity surveys. It is also fully consistent with the observed frequency of 0-3 AU extra solar planets. Thus the result demonstrates that the radial velocity brown dwarf desert does not extend to wide separations contrary to previous belief.

Measurement Instrumentation Sensors Mr. Rohit Manglik, 2024-07-24 In this book we will study about measurement instrumentation sensors to understand its practical applications and theoretical foundations across scientific and engineering disciplines.

The Formation of Galactic Bulges C. Marcella Carollo, Henry C. Ferguson, Rosemary F. G. Wyse, 1999 Bulges lie at the center of spiral galaxies. Until recently they were thought to host uniquely old stellar populations and thus provide a key for understanding galaxy formation. Recent observations from the ground and space have drastically changed our view on the nature of bulges and shown that they can also contain dust gas and star forming regions. This timely volume presents review articles by a panel of international experts who gathered at a conference at the Space Telescope Science Institute Baltimore to address several fundamental questions: What is a bulge? When and how did bulges form? And on what timescales? This volume provides a state of the art picture of our new understanding of these fundamental building blocks of galaxies and a stimulating reference point for all those interested in galaxy formation.
