## Abstract

### Background & Study Aim:

Sport, professionally and for all, is an area of both the application of modern technology, and to create new ones. The premises of such a statement is to protect health (all practitioners sport) and to achieve optimal sport results first of all by top athletes. In judo, like in each combat sports, motoric actions are conducted directly on the body of an athlete during a specific exercise (*Ura, uchi koma* etc.), training fights (*randori*) and the tournaments ones. The aim of this work are the most important premises based on the analysis of the available technology, augmented reality (AR) in relation to the expectations of adaptive judo athletes (under the scientific knowledge about the determinants of success) and an unspoken construction of research tools and training, including initial scenarios.

### Material & Methods:

We use the design method and the Delphi method involving the science of martial arts experts" (2 professors sport science and at the same time judo coaches master class, 1 professor management science and judo coach first class, 1 PhD and three times of Judo World Champion, 1 PhD and Kanto World Champion). In our opinion, an essential value of the project are not only the methods but also the selection of experts (all of the scientific qualifications and experience of the practice of combat sports). The selection of only those people who possess abilities to perform scientific analysis of a studied phenomenon has been a very essential criterion for us methodological perspective.

### Results:

All the experts agreed that the essence of judo sport is to maintain a vertical posture and break the balance opponent. Only such a result makes it possible to continue the fight in the horizontal posture. However, these two general principles does not mean that they are fighting techniques of judo to ensure reliability.

### Conclusion:

Therefore design methodology of teaching and perfecting judo techniques using AR cannot ignore these rules.
