Deterministic and Stochastic Models of AIDS Epidemics and HIV Infections with Intervention W. Y. Tan, Hulin Wu, 2005 Only book on extensive deterministic models statistic models stochastic models and state space models and statistical methods for HIV epidemic involving IV drug usage and HIV epidemic in homosexual populations Provides most recent biological insights into HIV pathogenesis and HIV kinetics at the cellular level and illustrates how to build up mathematical models based on these biological insights Only publication that provides in depth analysis of HAART treatment protocols and discusses possible improvements to the HAART protocol The book also provides connection between pharmacokinetics with treatment in HIV infected individuals

Introduction To Matrix Theory: With Applications In Economics And Engineering (Second Edition) Ferenc Szidarovszky, Sandor Molnar, Mark Molnar, 2022-12-19 Linear algebra and matrix theory are among the most important and most frequently applied branches of mathematics They are especially important in solving engineering and economic models where either the model is assumed linear or the nonlinear model is approximated by a linear model and the resulting linear model is examined This book is mainly a textbook that covers a one semester upper division course or a two semester lower division course on the subject The second edition will be an extended and modernized version of the first edition We added some new theoretical topics and some new applications from fields other than economics We also added more difficult exercises at the end of each chapter which require deep understanding of the theoretical issues We also modernized some proofs in the theoretical discussions which give better overview of the study material In preparing the manuscript we also corrected the typos and errors so the second edition will be a corrected extended and modernized new

version of the first edition Bloch-type Periodic Functions: Theory And Applications To Evolution Equations Yong-kui Chang, Gaston Mandata N'guerekata, Rodrigo Ponce, 2022-07-13 This monograph aims to provide for the first time a unified and homogenous presentation of the recent works on the theory of Bloch periodic functions their generalizations and their applications to evolution equations It is useful for graduate students and beginning researchers as seminar topics graduate courses and reference text in pure and applied mathematics physics and engineering Handbook of Cancer Models with Applications W. Y. Tan, Leonid G. Hanin, 2008 Composed of contributions from an international team of leading researchers this book pulls together the most recent research results in the field of cancer modeling to provide readers with the most advanced mathematical models of cancer and their applications Topics included in the book cover oncogenetic trees stochastic multistage models of carcinogenesis effects of ionizing radiation on cell cycle and genomic instability induction of DNA damage by ionizing radiation and its repair epigenetic cancer models bystander effects of radiation multiple pathway models of human colon cancer and stochastic models of metastasis The book also provides some important applications of cancer models to the assessment of cancer risk associated with various hazardous environmental agents to cancer screening by MRI and to drug resistance in cancer chemotherapy An updated statistical design and analysis of xenograft experiments as well as a statistical analysis of cancer occult clinical data are also provided The book will serve as a useful source of reference for researchers in biomathematics biostatistics and bioinformatics for clinical investigators and medical doctors employing quantitative methods to develop procedures for cancer diagnosis prevention control and treatment and for graduate students Advanced Inequalities George A. Anastassiou, 2011 This monograph presents univariate and multivariate classical analyses of advanced inequalities This treatise is a culmination of the author's last thirteen years of research work The chapters are self contained and several advanced courses can be taught out of this book Extensive background and motivations are given in each chapter with a comprehensive list of references given at the end The topics covered are wide ranging and diverse Recent advances on Ostrowski type inequalities Opial type inequalities Poincare and Sobolev type inequalities and HardyOpial type inequalities are examined Works on ordinary and distributional Taylor formulae with estimates for their remainders and applications as well as ChebyshevGruss Gruss and Comparison of Means inequalities are studied The results presented are mostly optimal that is the inequalities are sharp and attained Applications in many areas of pure and applied mathematics such as mathematical analysis probability ordinary and partial differential equations numerical analysis information theory etc are explored in detail as such this monograph is suitable for researchers and graduate students It will be a useful teaching material at seminars as well as an invaluable reference source in all science libraries **Introduction to Matrix Theory** Ferenc Szidarovszky, Sándor Molnár, 2002 In economic modeling and planning as well as in business most problems are linear or approximated by linear models Such problems are solved by matrix methods so the material presented in this book is essential to these fields **Approximation By Complex**

Bernstein And Convolution Type Operators Sorin G Gal, 2009-08-11 The monograph as its first main goal aims to study the overconvergence phenomenon of important classes of Bernstein type operators of one or several complex variables that is to extend their quantitative convergence properties to larger sets in the complex plane rather than the real intervals The operators studied are of the following types Bernstein Bernstein Faber Bernstein Butzer q Bernstein Bernstein Stancu Bernstein Kantorovich Favard Szász Mirakjan Baskakov and Balázs Szabados The second main objective is to provide a study of the approximation and geometric properties of several types of complex convolutions the de la Vallée Poussin Fejér Riesz Zygmund Jackson Rogosinski Picard Poisson Cauchy Gauss Weierstrass q Picard q Gauss Weierstrass Post Widder rotation invariant Sikkema and nonlinear Several applications to partial differential equations PDEs are also presented Many of the open problems encountered in the studies are proposed at the end of each chapter For further research the monograph suggests and advocates similar studies for other complex Bernstein type operators and for other linear and nonlinear convolutions
