Luckhurst, C.A. Veracini, 2012-12-06 Liquid crystalline phases are now known to be formed by an ever growing range of quite diverse materials these include those of low molecular weight as well as the novel liquid crystalline polymers such phases can also be induced by the addition of a solvent to amphiphilic systems leading to lyotropic liquid crystals Irrespective of the structure of the constituent molecules these numerous liquid crystal phases are characterised by their long range orientational order In addition certain phases exhibit elements of long range positional order Our understanding both experimental and theoretical at the molecular level of the static behaviour of these fascinating and important materials is now well advanced In contrast the influence of the long range order both orientational and positional on the molecular dynamics in liquid crystal states is less well understood In an attempt to address this situation a NATO Advanced Study Institute devoted to liquid crystal dynamics was held at Cortina d'Ampezzo Italy in September 1989 This brought together experimentalists and theoreticians concerned with the various dynamical processes occurring in all liquid crystals The skills of the participants was impressively wide ranging they spanned the experimental techniques used in the study of molecular dynamics the nature of the systems investigated and the theoretical models employed to understand the results While much was learnt it was also recognised that much more needed to be done in order to advance our understanding of molecular dynamics in liquid crystal states **Geometry, Spectral Theory, Groups, and Dynamics** Robert Brooks, Michael Entov, Yehuda Pinchover, Michah Sageev, 2005 This volume contains articles based on talks given at the Robert Brooks Memorial Conference on Geometry and Spectral Theory and the Workshop on Groups Geometry and Dynamics held at Technion the Israel Institute of Technology Haifa Robert Brooks 1952-2002 broad range of mathematical interests is represented in the volume which is devoted to various aspects of global analysis spectral theory the theory of Riemann surfaces Riemannian and discrete geometry and number theory A survey of Brooks work has been written by his close colleague Peter Buser Also included in
