

Stochastic Hydrology

- Hydrological processes exhibit variations in both space and time. As hydrological models are simplified versions of reality, they produce predictions or estimates of hydrological variables (e.g. runoff, hydraulic head, concentration) that are inherently erroneous.
- Stochastic hydrology is mainly concerned about presenting and assessing uncertainty in hydrological analysis, modeling and forecasting.

Stochastic Processes In Hydrology:

Stochastic Processes in Hydrology Vujica M. Yevjevich,1972 **Stochastic Hydrology and its Use in Water Resources Systems Simulation and Optimization** J.B. Marco,R. Harboe,J.D. Salas,2012-12-06 Stochastic hydrology is an essential base of water resources systems analysis due to the inherent randomness of the input and consequently of the results These results have to be incorporated in a decision making process regarding the planning and management of water systems It is through this application that stochastic hydrology finds its true meaning otherwise it becomes merely an academic exercise A set of well known specialists from both stochastic hydrology and water resources systems present a synthesis of the actual knowledge currently used in real world planning and management The book is intended for both practitioners and researchers who are willing to apply advanced approaches for incorporating hydrological randomness and uncertainty into the simulation and optimization of water resources systems abstract Stochastic hydrology is a basic tool for water resources systems analysis due to inherent randomness of the hydrologic cycle This book contains actual techniques in use for water resources planning and management incorporating randomness into the decision making process Optimization and simulation the classical systems analysis technologies are revisited under up to date statistical hydrology findings backed by real world applications **Stochastic Processes in Hydrology , by Vujica Yevjevich** Vujica M. Yevjevich,1972

Stochastic Processes in Hydrology Vujica M. Yevjevich,1972 **Stochastic Methods in Hydrology** Ole E. Barndorff-Nielsen,1998 This book communicates some contemporary mathematical and statistical developments in river basin hydrology as they pertain to space time rainfall spatial landform and network structures and their role in understanding averages and fluctuations in the hydrologic water balance of river basins While many of the mathematical and statistical nations have quite classical mathematical roots the river basin data structure has led to many variations on the problems and theory **Statistics and Stochastic Processes in Hydrology** M. J. Hall,2002 *Stochastic Water*

Resources Technology N. T Kottegoda,1980-06-18 **Theory of Stochastic Processes in Hydrology and River Runoff Regulation** N.A. Kartvelishvili,1967 *Stochastic and Statistical Methods in Hydrology and Environmental Engineering* Keith W. Hipel,2012-12-06 Objectives The current global environmental crisis has reinforced the need for developing flexible mathematical models to obtain a better understanding of environmental problems so that effective remedial action can be taken Because natural phenomena occurring in hydrology and environmental engineering usually behave in random and probabilistic fashions stochastic and statistical models have major roles to play in the protection and restoration of our natural environment Consequently the main objective of this edited volume is to present some of the most up to date and promising approaches to stochastic and statistical modelling especially with respect to groundwater and surface water applications Contents As shown in the Table of Contents the book is subdivided into the following main parts GENERAL ISSUES PART I PART II GROUNDWATER PART III SURFACE WATER PART IV STOCHASTIC OPTIMIZATION PART V

MOMENT ANALYSIS PART VI OTHER TOPICS Part I raises some thought provoking issues about probabilistic modelling of hydro logical and environmental systems The first two papers in Part I are in fact keynote papers delivered at an international environmetrics conference held at the University of Waterloo in June 1993 in honour of Professor T E Unny In his keynote pa per Dr S J Burges of the University of Washington places into perspective the historical and future roles of stochastic modelling in hydrology and environmental engineering Additionally Dr Burges stresses the need for developing a sound scien tific basis for the field of hydrology Professor P E Theory of Stochastic Processes in Hydrology and River Unoff Regulation N.A.
