Windt, 2023-12-05 A comprehensive proposal for a conceptual framework for describing conscious experience in dreams integrating philosophy of mind sleep and dream research and interdisciplinary consciousness studies Dreams conceived as conscious experience or phenomenal states during sleep offer an important contrast condition for theories of consciousness and the self Yet although there is a wealth of empirical research on sleep and dreaming its potential contribution to consciousness research and philosophy of mind is largely overlooked This might be due in part to a lack of conceptual clarity and an underlying disagreement about the nature of the phenomenon of dreaming itself In Dreaming Jennifer Windt lays the groundwork for solving this problem She develops a conceptual framework describing not only what it means to say that dreams are conscious experiences but also how to locate dreams relative to such concepts as perception hallucination and imagination as well as thinking knowledge belief deception and self consciousness Arguing that a conceptual framework must be not only conceptually sound but also phenomenologically plausible and carefully informed by neuroscientific research Windt integrates her review of philosophical work on dreaming both historical and contemporary with a survey of the most

important empirical findings This allows her to work toward a systematic and comprehensive new theoretical understanding of dreaming informed by a critical reading of contemporary research findings Windt's account demonstrates that a philosophical analysis of the concept of dreaming can provide an important enrichment and extension to the conceptual repertoire of discussions of consciousness and the self and raises new questions for future research
