Stochastic Modeling Of Aids Epidemiology And Hiv Pathogenesis:

Stochastic Modelling Of Aids Epidemiology And Hiv Pathogenesis Wai-yuan Tan, 2000-09-29 This book discusses systematically treatment on the development of stochastic statistical and state space models of the HIV epidemic and of HIV pathogenesis in HIV infected individuals and presents the applications of these models The book is unique in several ways 1 it uses stochastic difference and differential equations to present the stochastic models of the HIV epidemic and HIV pathogenesis in this sense the deterministic models are considered as special cases when the numbers of different type of people or cells are very large 2 it provides a critical analysis of deterministic and statistical models in the literature 3 it develops state space models by combining stochastic models and statistical models and 4 it provides a detailed discussion on the pros and cons of the different modeling approaches This book is the first to introduce state space models for the HIV epidemic It is also the first to develop stochastic models and state space models for the HIV pathogenesis in HIV infected individuals

Stochastic Modeling of AIDS Epidemiology and HIV Pathogenesis W. Y. Tan, 2000 This book discusses systematically treatment on the development of stochastic statistical and state space models of the HIV epidemic and of HIV pathogenesis in HIV infected individuals and presents the applications of these models The book is unique in several ways 1 it uses stochastic difference and differential equations to present the stochastic models of the HIV epidemic and HIV pathogenesis in this sense the deterministic models are considered as special cases when the numbers of different type of people or cells are very large 2 it provides a critical analysis of deterministic and statistical models in the literature 3 it develops state space models by combining stochastic models and statistical models and 4 it provides a detailed discussion on the pros and cons of the different modeling approaches This book is the first to introduce state space models for the HIV epidemic It is also the first to develop stochastic models and state space models for the HIV pathogenesis in HIV infected individuals

Stochastic Models with Applications to Genetics, Cancers, AIDS and Other Biomedical Systems W. Y. Tan, 2002 This book presents a systematic treatment of Markov chains diffusion processes and state space models as well as alternative approaches to Markov chains through stochastic difference equations and stochastic differential equations It illustrates how these processes and approaches are applied to many problems in genetics carcinogenesis AIDS epidemiology and other biomedical systems One feature of the book is that it describes the basic MCMC Markov chain and Monte Carlo procedures and illustrates how to use the Gibbs sampling method and the multilevel Gibbs sampling method to solve many problems in genetics carcinogenesis AIDS and other biomedical systems As another feature the book develops many state space models for many genetic problems carcinogenesis AIDS epidemiology and HIV pathogenesis It shows in detail how to use the multilevel Gibbs sampling method to estimate or predict simultaneously the state variables and the unknown parameters in cancer chemotherapy carcinogenesis AIDS epidemiology and HIV pathogenesis As a matter of fact this book is the first to develop many state space models for many genetic problems carcinogenesis and other biomedical problems

Stochastic Models with Applications to Genetics, Cancers, AIDS and Other Biomedical Systems (second Edition) W. Y. Tan, 2015-10-28 This book presents a systematic treatment of Markov chains diffusion processes and state space models as well as alternative approaches to Markov chains through stochastic difference equations and stochastic differential equations It illustrates how these processes and approaches are applied to many problems in genetics carcinogenesis AIDS epidemiology and other biomedical systems One feature of the book is that it describes the basic MCMC Markov chain and Monte Carlo procedures and illustrates how to use the Gibbs sampling method and the multilevel Gibbs sampling method to solve many problems in genetics carcinogenesis AIDS and other biomedical systems As another feature the book develops many state space models for many genetic problems carcinogenesis AIDS epidemiology and HIV pathogenesis It shows in detail how to use the multilevel Gibbs sampling method to estimate or predict simultaneously the state variables and the unknown parameters in cancer chemotherapy carcinogenesis AIDS epidemiology and HIV pathogenesis As a matter of fact this book is the first to develop several state space models for many genetic problems carcinogenesis and other biomedical problems To emphasize special applications to medical problems in this new edition the book has added a new chapter to illustrate how to develop biologically supported stochastic models and state space models of carcinogenesis in human beings Specific examples include hidden Markov models and state space models for human colon cancer human liver cancer and some human pediatric cancers such as retinoblastoma and hepatoblastoma The book also gives examples to illustrate how to develop procedures to assess cancer risk of environmental agents through initiation promotion protocols

Quantitative Methods for Investigating Infectious Disease Outbreaks Ping Yan, Gerardo Chowell, 2019-08-16 This book provides a systematic treatment of the mathematical underpinnings of work in the theory of outbreak dynamics and their control covering balanced perspectives between theory and practice including new material on contemporary topics in the field of infectious disease modelling Specifically it presents a unified mathematical framework linked to the distribution theory of non negative random variables the many examples used in the text are introduced and discussed in light of theoretical perspectives The book is organized into 9 chapters The first motivates the presentation of the material on subsequent chapters Chapter 2 3 provides a review of basic concepts of probability and statistical models for the distributions of continuous lifetime data and the distributions of random counts and counting processes which are linked to phenomenological models Chapters 4 focuses on dynamic behaviors of a disease outbreak during the initial phase while Chapters 5 6 broadly cover compartment models to investigate the consequences of epidemics as the outbreak moves beyond the initial phase Chapter 7 provides a transition between mostly theoretical topics in earlier chapters and Chapters 8 and 9 where the focus is on the data generating processes and statistical issues of fitting models to data as well as specific mathematical epidemic modeling applications respectively This book is aimed at a wide audience ranging from graduate students to established scientists from quantitatively oriented fields of epidemiology mathematics and statistics The

numerous examples and illustrations make understanding of the mathematics of disease transmission and control accessible Furthermore the examples and exercises make the book suitable for motivated students in applied mathematics either through a lecture course or through self study This text could be used in graduate schools or special summer schools covering research problems in mathematical biology Quantitative Medical Data Analysis Using Mathematical Tools And Statistical Techniques Don Hong,Yu Shyr,2007-07-10 Quantitative biomedical data analysis is a fast growing interdisciplinary area of applied and computational mathematics statistics computer science and biomedical science leading to new fields such as bioinformatics biomathematics and biostatistics In addition to traditional statistical techniques and mathematical models using differential equations new developments with a very broad spectrum of applications such as wavelets spline functions curve and surface subdivisions sampling and learning theory have found their mathematical home in biomedical data analysis This book gives a new and integrated introduction to quantitative medical data analysis from the viewpoint of biomathematicians biostatisticians and bioinformaticians It offers a definitive resource to bridge the disciplines of mathematics statistics and biomedical sciences Topics include mathematical models for cancer invasion and clinical sciences data mining techniques and subset selection in data analysis survival data analysis and survival models for cancer patients statistical analysis and neural network techniques for genomic and proteomic data analysis wavelet and spline applications for mass spectrometry data preprocessing and statistical computing *Mapping AIDS* Lukas Engelman,2018-11-08 Offers an innovative study of visual traditions in modern medical history through debates about the causes impact and spread of AIDS **Encyclopedia of Statistical Sciences, Volume 1** ,2005-12-16 Countless professionals and students who use statistics in their work rely on the multi volume Encyclopedia of Statistical Sciences as a superior and unique source of information on statistical theory methods and applications This new edition available in both print and on line versions is designed to bring the encyclopedia in line with the latest topics and advances made in statistical science over the past decade in areas such as computer intensive statistical methodology genetics medicine the environment and other applications Written by over 600 world renowned experts including the editors the entries are self contained and easily understood by readers with a limited statistical background With the publication of this second edition in 16 printed volumes the Encyclopedia of Statistical Sciences retains its position as a cutting edge reference of choice for those working in statistics biostatistics quality control economics sociology engineering probability theory computer science biomedicine psychology and many other areas *Mathematics in Population Biology* Horst R. Thieme,2018-06-05 The formulation analysis and re evaluation of mathematical models in population biology has become a valuable source of insight to mathematicians and biologists alike This book presents an overview and selected sample of these results and ideas organized by biological theme rather than mathematical concept with an emphasis on helping the reader develop appropriate modeling skills through use of well chosen and varied examples Part I starts with unstructured single species population models

particularly in the framework of continuous time models then adding the most rudimentary stage structure with variable stage duration The theme of stage structure in an age dependent context is developed in Part II covering demographic concepts such as life expectation and variance of life length and their dynamic consequences In Part III the author considers the dynamic interplay of host and parasite populations i e the epidemics and endemics of infectious diseases The theme of stage structure continues here in the analysis of different stages of infection and of age structure that is instrumental in optimizing vaccination strategies Each section concludes with exercises some with solutions and suggestions for further study The level of mathematics is relatively modest a toolbox provides a summary of required results in differential equations integration and integral equations In addition a selection of Maple worksheets is provided The book provides an authoritative tour through a dazzling ensemble of topics and is both an ideal introduction to the subject and reference for researchers
