## **Stochastic Theory Cascade Processes:**

**Stochastic Theory and Cascade Processes** S. Kidambi Srinivasan, 1969      **Elements of the Theory of Markov Processes and Their Applications** A. T. Bharucha-Reid, 2012-04-26 This graduate level text and reference in probability with numerous applications to several fields of science presents nonmeasure theoretic introduction to theory of Markov processes The work also covers mathematical models based on the theory employed in various applied fields Prerequisites are a knowledge of elementary probability theory mathematical statistics and analysis Appendixes Bibliographies 1960 edition      **An Introduction to the Theory of Point Processes** Daryl J. Daley, David Vere-Jones, 2013-03-14 Stochastic point processes are sets of randomly located points in time on the plane or in some general space This book provides a general introduction to the theory starting with simple examples and an historical overview and proceeding to the general theory It thoroughly covers recent work in a broad historical perspective in an attempt to provide a wider audience with insights into recent theoretical developments It contains numerous examples and exercises This book aims to bridge the gap between informal treatments concerned with applications and highly abstract theoretical treatments      **An Introduction to the Theory of Point Processes** D.J. Daley, D. Vere-Jones, 2003-11-14 Point processes and random measures find wide applicability in telecommunications earthquakes image analysis spatial point patterns and stereology to name but a few areas The authors have made a major reshaping of their work in their first edition of 1988 and now present their Introduction to the Theory of Point Processes in two volumes with sub titles Elementary Theory and Models and General Theory and Structure Volume One contains the introductory chapters from the first edition together with an informal treatment of some of the later material intended to make it more accessible to readers primarily interested in models and applications The main new material in this volume relates to marked point processes and to processes evolving in time where the conditional intensity methodology provides a basis for model building inference and prediction There are abundant examples whose purpose is both didactic and to illustrate further applications of the ideas and models that are the main substance of the text      **Point Processes** D.R. Cox, Valerie Isham, 2018-12-19 There has been much recent research on the theory of point processes i e on random systems consisting of point events occurring in space or time Applications range from emissions from a radioactive source occurrences of accidents or machine breakdowns or of electrical impulses along nerve fibres to repetitive point events in an individual's medical or social history Sometimes the point events occur in space rather than time and the application here ranges from statistical physics to geography The object of this book is to develop the applied mathematics of point processes at a level which will make the ideas accessible both to the research worker and the postgraduate student in probability and statistics and also to the mathematically inclined individual in another field interested in using ideas and results A thorough knowledge of the key notions of elementary probability theory is required to understand the book but specialised pure mathematical considerations have been avoided      **Point Processes and Product**

**Densities** S. Kidambi Srinivasan, A. Vijayakumar, 2003 Point processes are random processes that are concerned with point events occurring in space or time A powerful method of analyzing them is through a sequence of correlation functions called product densities introduced by Alladi Ramakrishnan In view of their wide applicability there is a spectacular development of the theory and applications of these processes in the recent past Most of the books and monographs in this area are not easily comprehensible to non mathematically oriented readers because of their abstraction and generality In addition the best way to learn a subject is to study the original papers Hence it is considered worthwhile to reprint some of the most significant contributions of Alladi Ramakrishnan and his associates to serve as a ready reference volume While a good working knowledge of elementary probability theory is a must some acquaintance with Markov processes will be helpful to read these papers This volume will be useful to young researchers working in the broad area of stochastic point processes and their applications and in particular indispensable to those working in stochastic modeling with special reference to problems of queues inventory reliability neural network etc It will also be useful to those working in the conventional areas of statistical physics fluctuating phenomena and communication theory and control where point processes are extensively employed *PROCEEDINGS OF THE SIXTH BERKELEY SYMPOSIUM ON MATHEMATICAL STATISTICS AND.*, 2021

*Transport Theory* Richard Bellman, Garrett Birkhoff, Ibrahim Abu-Shumays, American Mathematical Society, Society for Industrial and Applied Mathematics, 1969 The industrial and military applications of atomic energy have stimulated much mathematical research in neutron transport theory The possibility of controlled thermonuclear processes has similarly focussed attention upon plasmas sometimes called the fourth state of matter Independently many classical aspects of kinetic theory and radiative transfer theory have been studied both because of their basic mathematical interest and of their physical applications to areas such as upper atmosphere meteorology introduction **The Legacy of Alladi Ramakrishnan in the Mathematical Sciences** Krishnaswami Alladi, John R. Klauder, Calyampudi R. Rao, 2010-08-26 Alladi Ramakrishnan 1923-2008 was an eminent scientist who had a wide range of research interests in theoretical and mathematical physics Professor Ramakrishnan made significant contributions to probability and statistics elementary particle physics cosmic rays and astrophysics matrix theory and the special theory of relativity Ramakrishnan believed strongly that in addition to doing fundamental research one must contribute to the advancement of the profession Inspired by his visit to the Institute for Advanced Study in Princeton in 1957-1958 he returned to Madras and began the Theoretical Physics Seminar at his family home Ekamra Nivas These seminars were ultimately responsible for the creation of MATSCIENCE The Institute of Mathematical Sciences in 1962 This institute of which he was the Director for its first 21 years has grown steadily in size and stature and is his monumental contribution to the profession In a distinguished scientific life that has spanned more than five decades Professor Ramakrishnan has come into close contact with and was influenced by several eminent mathematicians and physicists and has moulded the careers of his several students and young researchers This volume which is a tribute to his

great legacy not only deals with his significant contributions to research and the profession but also contains a fine collection of research and survey papers by leading physicists and mathematicians that cover a broad range of areas in the mathematical sciences

**Lectures on the Poisson Process** Günter Last, Mathew Penrose, 2017-10-26 A modern introduction to the Poisson process with general point processes and random measures and applications to stochastic geometry
