Stone In Architecture:

Stone in Architecture Erhard Winkler, 2013-03-14 The readers of the first two editions of *Stone Properties* Durability in Man's Environment were mostly architects restoration architects of buildings and monuments in natural stone professionals who sought basic technical information for non geologists The increasing awareness of rapidly decaying monuments and their rescue from loss to future generations have urged this writer to update the 1973 and 1975 editions now unavailable and out of print Due to the 20 year long interval extensive updating was necessary to produce this new book The present edition concentrates on the natural material stone as building stone dimension stone architectural stone and decorative field stones Recently the use of stone for thin curtain walls on buildings has become fashionable The thin slabs exposed to a new unknown complexity of stresses resulting in bowing of crystalline marble has attracted much negative publicity The costs of replacing white slabs of marble on entire buildings with its legal implications have led construction companies into bankruptcy We blame many environmental problems on acid rain Does acid rain really accelerate stone decay that much Stone preservation is being attempted with an ever increasing number of chemicals applied by as many specialists to save crumbling stone Chemists filled this need during a time of temporary job scarcity while the general geologist missed this opportunity he was too deeply involved in the search for fossil fuels and metals

Architectural Stone Mark A. Chacon, 1999-10-11 The past quarter century has seen a near revolution in the availability versatility and cost of architectural stone Enormous technological advances in fabrication transportation and installation have combined with the emergence of new sources of stone in China India Southeast Asia and the former Soviet Union to produce an astounding variety of choices for architects interested in incorporating stone into their designs But beyond the visual aesthetic of a sample how can an architect determine whether a particular stone possesses characteristics suitable for a specific project This is a crucial question since an improper selection can cost thousands or even millions of dollars to correct In *Architectural Stone* Mark Chacon takes the guesswork out of stone selection design and installation He provides detailed information on geological formation physical characteristics and fabrication techniques for igneous sedimentary and metamorphic stone and explains how these factors affect design and installation Taking a how to approach he offers detailed instructions for all major installation techniques and examines the materials systems and specifications required for each technique as well as methods of finishing sealing and maintaining installed stone Finally he presents detailed guidelines for the selection of stone including selection criteria and practical concerns special considerations for interior and exterior installations informal testing and practical analysis and the availability and suitability of particular types of stone The only one stop source for complete information on building stone *Architectural Stone* also provides More than 100 field photographs detailing the quarrying fabrication and installation of a wide variety of building stone Architectural details that describe the intent and use of stone in building systems Computer generated images of the geological formation of stone The first and only comprehensive reference for owners

architects interior designers and other building professionals working with stone this book provides authoritative up to date answers to critical questions on every aspect of using stone as a building material *New Stone Architecture* David Dernie,2003 A discussion of stone construction and the nature of stone as a material Aimed at practising architects and students this study describes the new technologies that make the new stone forms possible This is followed by 33 case studies from around the world **Stone in Architecture** Siegfried Siegesmund,Rolf Snethlage,2014-07-08 The weathering of historical buildings and indeed of monuments and sculptures of natural stone is a problem that has been encountered for hundreds of years However a dramatic increase in deterioration in the structure of our built heritage has been observed during the past century To understand the complex interaction that the stone in a building suffers with its near environment the building and the macro environment the local climate and atmospheric conditions requires an interdisciplinary approach and the application of many disciplines Climate change over the next 100 years is likely to have a range of direct and indirect impacts on many natural and physical environments including the built environment The protection of our architectural heritage has both cultural and historical importance as well as substantial economic and ecological value Large sums of money are being spent world wide on measures for the preservation of monuments and historical buildings The past few decades has seen an unprecedented level of research activity in this area the result of which is often difficult to access and are summarized in the new edition of STONE IN ARCHITECTURE The 4th edition of Stone in Architecture Properties Durability is a sophisticated and thorough exploration of stone its properties performance and conservation in monumental contexts The current editors Siegfried Siegesmund and Rolf Snethlage note the pioneering work of Erhard Winkler who wrote the first edition in 1973 when so little information could be found in the literature on the subject This new edition also published by Springer nearly doubles the size of Winkler s 1994 effort If you are familiar with the field and need to know little more than this statement you can put aside this review and go buy the book George Wheeler Department of Scientific Research The Metropolitan Museum of Art New York Stone in Architecture Siegfried Siegesmund,Rolf Snethlage,2011-01-25 The weathering of historical buildings and indeed of monuments and sculptures of natural stone is a problem that has been encountered for hundreds of years However a dramatic increase in deterioration in the structure of our built heritage has been observed during the past century To understand the complex interaction that the stone in a building suffers with its near environment the building and the macro environment the local climate and atmospheric conditions requires an interdisciplinary approach and the application of many disciplines Climate change over the next 100 years is likely to have a range of direct and indirect impacts on many natural and physical environments including the built environment The protection of our architectural heritage has both cultural and historical importance as well as substantial economic and ecological value Large sums of money are being spent world wide on measures for the preservation of monuments and historical buildings The past few decades has seen an unprecedented level of research activity in this area

the results of which are often difficult to access and are summarized in the new edition of STONE IN ARCHITECTURE
