**Solving Polynomial Equation Systems I** Teo Mora, 2003 Mora covers the classical theory of finding roots of a univariate polynomial emphasising computational aspects. He shows that solving a polynomial equation really means finding algorithms that help one manipulate roots rather than simply computing them. To that end he also surveys algorithms for factorizing univariate polynomials. *Solving Polynomial Equation Systems I* Teo Mora, 2003-03-27 Computational algebra computational number theory commutative algebra handbook reference algorithmic modern [Solving Polynomial Equation Systems III: Volume 3, Algebraic Solving](#) Teo Mora, 2015-08-07 This third volume of four finishes the program begun in Volume 1 by describing all the most important techniques mainly based on Gröbner bases which allow one to manipulate the roots of the equation rather than just compute them. The book begins with the standard solutions Gianni-Kalkbrenner Theorem Stetter Algorithm Cardinal Mourrain result and then moves on to more innovative methods Lazard triangular sets Rouillier's Rational Univariate Representation the TERA Kronecker package. The author also looks at classical results such as Macaulay's Matrix and provides a historical survey of elimination from Bezout to Cayley. This comprehensive treatment in four volumes is a significant contribution to algorithmic commutative algebra that will be essential reading for algebraists and algebraic geometers.

**Solving Polynomial Equation Systems , Recent Advances in Real Complexity and Computation** Luis M. Pardo, Jose Luis Montaña, 2014-11-12 This volume is composed of six contributions derived from the lectures given during the UIMP RSME Lluís Santalo Summer School on Recent Advances in Real Complexity and Computation held July 16-20 2012 in Santander Spain. The goal of this Summer School was to present some of the recent advances on Smale's 17th Problem: Can a zero of  $n$  complex polynomial equations in  $n$  unknowns be found approximately on the average in polynomial time with a uniform algorithm? These papers cover several aspects of this problem from numerical to symbolic methods in polynomial equation solving computational complexity aspects both worst and average cases and both upper and lower complexity bounds as well as aspects of the underlying geometry of the problem. Some of the contributions also deal with either real or multiple solutions solving.

[The Gröbner Cover](#) Antonio Montes, 2019-03-01 This book is divided into two parts: one theoretical and one focusing on applications, and offers a complete description of the Canonical Gröbner Cover, the most accurate algebraic method for discussing parametric polynomial systems. It also includes applications to the Automatic Deduction of Geometric Theorems, Loci Computation and Envelopes. The theoretical part is a self-contained exposition on the theory of Parametric Gröbner Systems and Bases. It begins with Weispfenning's introduction of Comprehensive Gröbner Systems (CGS) in 1992 and provides a complete description of the Gröbner Cover (GC) which includes a canonical discussion of a set of parametric polynomial equations developed by Michael Wibmer and the author. In turn, the application part selects three problems for which the Gröbner Cover offers valuable new perspectives. The automatic deduction of geometric theorems ADGT becomes fully automatic and straightforward using GC, representing a major improvement on all previous

methods In terms of loci and envelope computation GC makes it possible to introduce a taxonomy of the components and automatically compute it The book also generalizes the definition of the envelope of a family of hypersurfaces and provides algorithms for its computation as well as for discussing how to determine the real envelope All the algorithms described here have also been included in the software library grobcov lib implemented in Singular by the author and serve as a User Manual for it     Solving Polynomial Equation Systems Teo Mora,2003 Covers extensions of Buchberger s Theory and Algorithm and promising recent alternatives to Gr bner bases     Solving Polynomial Equation Systems II Teo Mora,2003 The second volume of this comprehensive treatise focusses on Buchberger theory and its application to the algorithmic view of commutative algebra In distinction to other works the presentation here is based on the intrinsic linear algebra structure of Groebner bases and thus elementary considerations lead easily to the state of the art in issues of implementation Aiming to be a complete survey on Groebner bases and their applications the book will be essential for all workers in commutative algebra computational algebra and algebraic geometry     Foundations of Computational Mathematics, Santander 2005 Luis M. Pardo,2006-06-29 Surveys and summaries of latest research in numerical analysis optimization computer algebra and scientific computing     **Solving Polynomial Equation Systems IV: Volume 4, Buchberger Theory and Beyond** Teo Mora,2016-04-01 In this fourth and final volume the author extends Buchberger s Algorithm in three different directions First he extends the theory to group rings and other Ore like extensions and provides an operative scheme that allows one to set a Buchberger theory over any effective associative ring Second he covers similar extensions as tools for discussing parametric polynomial systems the notion of SAGBI bases Gr bner bases over invariant rings and Hironaka s theory Finally Mora shows how Hilbert s followers notably Janet Gunther and Macaulay anticipated Buchberger s ideas and discusses the most promising recent alternatives by Gerdt involutive bases and Faug re F4 and F5 This comprehensive treatment in four volumes is a significant contribution to algorithmic commutative algebra that will be essential reading for algebraists and algebraic geometers     **Constructive Commutative Algebra** Ihsen Yengui,2015-12-11 The main goal of this book is to find the constructive content hidden in abstract proofs of concrete theorems in Commutative Algebra especially in well known theorems concerning projective modules over polynomial rings mainly the Quillen Suslin theorem and syzygies of multivariate polynomials with coefficients in a valuation ring Simple and constructive proofs of some results in the theory of projective modules over polynomial rings are also given and light is cast upon recent progress on the Hermite ring and Gr bner ring conjectures New conjectures on unimodular completion arising from our constructive approach to the unimodular completion problem are presented Constructive algebra can be understood as a first preprocessing step for computer algebra that leads to the discovery of general algorithms even if they are sometimes not efficient From a logical point of view the dynamical evaluation gives a constructive substitute for two highly nonconstructive tools of abstract algebra the Law of Excluded Middle and Zorn s Lemma For instance these tools are required in order to construct the complete prime

factorization of an ideal in a Dedekind ring whereas the dynamical method reveals the computational content of this construction These lecture notes follow this dynamical philosophy

**Commutative Algebra: Constructive Methods** Henri Lombardi, Claude Quitté, 2015-07-22 Translated from the popular French edition this book offers a detailed introduction to various basic concepts methods principles and results of commutative algebra It takes a constructive viewpoint in commutative algebra and studies algorithmic approaches alongside several abstract classical theories Indeed it revisits these traditional topics with a new and simplifying manner making the subject both accessible and innovative The algorithmic aspects of such naturally abstract topics as Galois theory Dedekind rings Prüfer rings finitely generated projective modules dimension theory of commutative rings and others in the current treatise are all analysed in the spirit of the great developers of constructive algebra in the nineteenth century This updated and revised edition contains over 350 well arranged exercises together with their helpful hints for solution A basic knowledge of linear algebra group theory elementary number theory as well as the fundamentals of ring and module theory is required Commutative Algebra Constructive Methods will be useful for graduate students and also researchers instructors and theoretical computer scientists

*Handbook on Semidefinite, Conic and Polynomial Optimization* Miguel F. Anjos, Jean B. Lasserre, 2011-11-19 Semidefinite and conic optimization is a major and thriving research area within the optimization community Although semidefinite optimization has been studied under different names since at least the 1940s its importance grew immensely during the 1990s after polynomial time interior point methods for linear optimization were extended to solve semidefinite optimization problems Since the beginning of the 21st century not only has research into semidefinite and conic optimization continued unabated but also a fruitful interaction has developed with algebraic geometry through the close connections between semidefinite matrices and polynomial optimization This has brought about important new results and led to an even higher level of research activity This Handbook on Semidefinite Conic and Polynomial Optimization provides the reader with a snapshot of the state of the art in the growing and mutually enriching areas of semidefinite optimization conic optimization and polynomial optimization It contains a compendium of the recent research activity that has taken place in these thrilling areas and will appeal to doctoral students young graduates and experienced researchers alike The Handbook's thirty one chapters are organized into four parts Theory covering significant theoretical developments as well as the interactions between conic optimization and polynomial optimization Algorithms documenting the directions of current algorithmic development Software providing an overview of the state of the art Applications dealing with the application areas where semidefinite and conic optimization has made a significant impact in recent years
