materials with novel theoretical and methodical approaches the systems of osteopathy and chiropractic are traced back and related to a seminal yet overlooked 19th century European discourse of so called mechanical medicine which also permeated the USA Shedding new light on the professionalization and gendering of the modern healthcare system this volume will be of value to students and scholars alike interested in the history of science technology and medicine Matters of the Heart Fay Bound Alberti,2010-01-14 The heart is the most symbolic organ of the human body Across cultures it is seen as the site of emotions as well as the origin of life We feel emotions in the heart from the heart stopping sensation of romantic love to the crushing sensation of despair And yet since the nineteenth century the heart has been redefined in medical terms as a pump an organ responsible for the circulation of the blood Emotions have been removed from the heart as an active site of influence and towards the brain It is the brain that is the organ most commonly associated with emotion in the modern West So why then do the emotional meanings of the heart linger Why do many transplantation patients believe that the heart for instance can transmit memories and emotions and why do we still refer to emotions as heartfelt We cannot answer these questions without reference to the history of the heart as both physical organ and emotional symbol Matters of the Heart traces the ways emotions have been understood between the seventeenth and nineteenth centuries as both physical entities and spiritual experiences With reference to historical interpretations of such key concepts as gender emotion subjectivity and the self it also addresses the shifting relationship from heart to brain as competing centres of emotion in the West
