The Onset Of Literacy Cognitive Processes In Reading Acquisition Cognition Special Issue:

The Onset of Literacy Paul Bertelson, 1987 **The Onset of Literacy** Paul Bertelson, 1987

The Onset of Literacy addresses one of the main questions in the field of reading research why the acquisition of skills in reading and writing appears to be so much more difficult than the earlier acquisition of speech communication As well as posing a major theoretical puzzle the question has important implications for both instructional practices and ways of dealing with dyslexic children Research on the reading process has made important progress in recent years thanks to conceptual and methodological advances in cognitive psychology psycholinguistics and neuropsychology which have made it possible to deal with complex issues that in the past seemed to defy rational analysis The Onset of Literacy presents a selective sample of work by major contemporary specialists who focus on current information processing approaches to the reading process and their interface with research on the development of reading and related skills An introduction by the editor summarizes and places the various contributions within current analyses of reading inspired by the information processing approach The chapters and their authors are The Ability to Manipulate Speech Sounds Depends on Knowing Alphabetic Writing Charles Read Zhang Yun Fei Nie Hong Yin and Ding BaoQing Literacy Training and Speech Segmentation Jos Morais Paul Bertelson Luz Cary and Jesus Alegria Phonological Awareness The Role of Reading Experience Virginia A Mann Word Recognition in Early Reading A Review of the Direct and Indirect Access Hypotheses Roderick W Barron The Similarities Between Normal Readers and Developmental and Acquired Dyslexics Peter Bryant and Lawrence Impey Language Mechanisms and Reading Disorder A Modular Approach Donald Shankweiler and Stephen Crain Paul Bertelson is Professor of Experimental Psychology and Director of the Laboratory of Experimental Psychology at the Universit Libre de Bruxelles The Onset of Literacy is in a series that is derived from special issues of Cognition International Journal of Cognitive Science edited by Jacques Mehler A Bradford Book *Computational Approaches to Language Acquisition* Michael R. Brent, 1997

The past fifteen years have seen great changes in the field of language acquisition New experimental methods have yielded insights into the linguistic knowledge of ever younger children and interest has grown in the phonological syntactic and semantic aspects of the lexicon Computational investigations of language acquisition have also changed reflecting among other things the profound shift in the field of natural language processing from hand crafted grammars to grammars that are learned automatically from samples of naturally occurring language Each of the four research papers in this book takes a novel formal approach to a particular problem in language acquisition In the first paper J M Siskind looks at developmentally inspired models of word learning In the second M R Brent and T A Cartwright look at how children could discover the sounds of words given that word boundaries are not marked by any acoustic analog of the spaces between written words In the third P Resnik measures the association between verbs and the semantic categories of their arguments that children likely use as clues to verb meanings Finally P Niyogi and R C Berwick address the setting of syntactic parameters such as headedness for

example whether the direct object comes before or after the verb

Cognition on Cognition Jacques Mehler, Susana Franck, 1995 This broad ranging volume includes a series of articles that were originally published as a special issue of Cognition produced to celebrate the 50th volume of the journal This broad ranging volume includes a series of articles that were originally published as a special issue of Cognition produced to celebrate the 50th volume of the journal Written by some of the foremost scientists studying different aspects of the mind the articles review progress achieved over the past twenty five years in the main areas of the discipline They provide a unique record of what is happening today in the field of cognition with an added historical perspective that is often absent from other volumes that seek to cover so much ground The chapters have been arranged in sections on Neuropsychology Thinking and Language and Perception These thematic areas deal with theoretical aspects ranging from the status of explanations in cognitive science to evolutionary accounts of human cognitive faculties to the way in which humans use these faculties to reason about perceive and interact with their environment and each other There are also contributions dealing with the abilities of young infants and articles that relate behaviors to their underlying neural substrata

A Bibliography on Writing and Written Language Konrad Ehlich, Florian Coulmas, Gabriele Graefen, 2011-06-01 The bibliography offers information on research about writing and written language over the past 50 years No comprehensive bibliography on this subject has been published since Sattler's 1935 handbook With a selection of some 27 500 titles it covers the most important literature in all scientific fields relating to writing Emphasis has been placed on the interdisciplinary organization of the bibliography creating many points of common interest for literacy experts educationalists psychologists sociologists linguists cultural anthropologists and historians The bibliography is organized in such a way as to provide the specialist as well as the researcher in neighboring disciplines with access to the relevant literature on writing in a given field While necessarily selective it also offers information on more specialized bibliographies In addition an overview of norms and standards concerning script and writing will prove very useful for non professional readers It is therefore also of interest to the generally interested public as a reference work for the humanities

The Cognitive Neuroscience of Consciousness Stanislas Dehaene, 2001 Empirical and theoretical foundations of a cognitive neuroscience of consciousness

Handbook of Reading Research Michael L. Kamil, P. David Pearson, Elizabeth Birr Moje, Peter Afflerbach, 2011-03-17 The Handbook of Reading Research is the research handbook for the field Each volume has come to define the field for the period of time it covers Volume IV brings the field authoritatively and comprehensively up to date

Objects and Attention Brian J. Scholl, 2002 An overview of object based models of attention

Object Recognition in Man, Monkey, and Machine Michael J. Tarr, Heinrich H. Bulthoff, 1999-03-15 The contributors bring a wide range of methodologies to bear on the common problem of image based object recognition These interconnected essays on three dimensional visual object recognition present cutting edge research by some of the most creative neuroscientific cognitive and computational scientists in the field Cassandra Moore and Patrick Cavanagh take a classic

demonstration the perception of two tone images and turn it into a method for understanding the nature of object representations in terms of surfaces and the interaction between bottom up and top down processes Michael J Tarr and Isabel Gauthier use computer graphics to study whether viewpoint dependent recognition mechanisms can generalize between exemplars of perceptually defined classes Melvyn A Goodale and G Keith Humphrey use innovative psychophysical techniques to investigate dissociable aspects of visual and spatial processing in brain injured subjects D I Perrett M W Oram and E Ashbridge combine neurophysiological single cell data from monkeys with computational analyses for a new way of thinking about the mechanisms that mediate viewpoint dependent object recognition and mental rotation Shimon Ullman also addresses possible mechanisms to account for viewpoint dependent behavior but from the perspective of machine vision Finally Philippe G Schyns synthesizes work from many areas to provide a coherent account of how stimulus class and recognition task interact The contributors bring a wide range of methodologies to bear on the common problem of image based object recognition

Connections and Symbols Steven Pinker, Jacques Mehler, 1988 Connections and Symbols provides the first systematic analysis of the explosive new field of Connectionism that is challenging the basic tenets of cognitive science Does intelligence result from the manipulation of structured symbolic expressions Or is it the result of the activation of large networks of densely interconnected simple units Connections and Symbols provides the first systematic analysis of the explosive new field of Connectionism that is challenging the basic tenets of cognitive science These lively discussions by Jerry A Fodor Zenon W Pylyshyn Steven Pinker Alan Prince Joel Lechter and Thomas G Bever raise issues that lie at the core of our understanding of how the mind works Does connectionism offer it truly new scientific model or does it merely cloak the old notion of associationism as a central doctrine of learning and mental functioning Which of the new empirical generalizations are sound and which are false And which of the many ideas such as massively parallel processing distributed representation constraint satisfaction and subsymbolic or microfeatural analyses belong together and which are logically independent Now that connectionism has arrived with full blown models of psychological processes as diverse as Pavlovian conditioning visual recognition and language acquisition the debate is on Common themes emerge from all the contributors to Connections and Symbols criticism of connectionist models applied to language or the parts of cognition employing language like operations and a focus on what it is about human cognition that supports the traditional physical symbol system hypothesis While criticizing many aspects of connectionist models the authors also identify aspects of cognition that could be explained by the connectionist models Connections and Symbols is included in the Cognition Special Issue series edited by Jacques Mehler
