Sorochenko, 2009-01-10 This guide to the physics and observations of Radio Recombination Lines from astronomical sources includes history theory applications 250 equations and 110 illustrations This soft cover edition contains corrections and updates from hardbound edition **Bulletin** Lowell Observatory, 1916 *Radio Recombination Lines* P.A. Shaver, 2012-12-06 Since their first detection 15 years ago radio recombination lines from several elements have been observed in a wide variety of objects including HII regions planetary nebulae molecular clouds the diffuse interstellar medium and recently other galaxies The observations span almost the entire range from 0.1 to 100 GHz and employ both single dish and aperture synthesis techniques The theory of radio recombination lines has also advanced strongly to the point where it is perhaps one of the best understood in astrophysics In a parallel development it has become possible over the last decade to study these same highly excited atoms in the laboratory this work provides further confirmation of the theoretical framework However there has been continuing controversy over the astrophysical interpretation of radio recombination line observations especially regarding the role of stimulated emission A workshop was held in Ottawa on 24-25 August 1979 bringing together many of the active scientists to review the field and discuss these questions of interpretation A broad consensus has emerged the subtleties of the line formation process are understood and the conditions under which reliable information can easily be extracted from the line measurements are known It thus appears likely that the emphasis will shift increasingly from the study of the line phenomenon itself to further application in other areas of astrophysics ranging from physical processes in plasmas temperatures densities ionization structure to the large scale properties of our galaxy abundances kinematics structure and studies of extragalactic systems *Archives of the Universe* Marcia Bartusiak, 2010-05-19 An unparalleled history of astronomy presented in the words of the scientists who made the discoveries Here are the writings of Copernicus Galileo Kepler Newton Halley Hubble and Einstein as well as that of dozens of others who have significantly contributed to our picture of the universe From Aristotle's proof that the Earth is round to the 1998 paper that posited an accelerating universe this book contains 100 entries spanning the history of astronomy Award winning science writer Marcia Bartusiak provides enormously entertaining introductions putting the material in context and explaining its place in the literature Archives of the Universe is essential reading for professional astronomers science history buffs and backyard stargazers alike
