The Origins Of Ptolemy's Astronomical Parameters:

The Origins of Ptolemy's Astronomical Parameters Robert R. Newton, 1982 **The Origins of Ptolemy's Astronomical Tables** Robert R. Newton, 1985 *Islamic Astronomical Tables* Benno van Dalen, 2023-05-31 This volume comprises nine articles on Islamic astronomy published since 1989 by Benno van Dalen. Van Dalen was the first historian of Islamic astronomy who made full use of the new possibilities of computers in the early 1990s. He implemented various statistical and numerical methods that can be used to determine the mathematical properties of medieval astronomical tables and utilized these to obtain entirely new until then unattainable historical results concerning the interdependence of individual tables and hence of entire astronomical works. His programmes for analysing tables making sexagesimal calculations and converting calendar dates continue to be widely used. The five articles in the first part of this collection explain the principles of a range of statistical methods for determining unknown parameter values underlying astronomical tables and present extensive step by step examples for their use. The four articles in the second part provide extensive studies of materials in unpublished primary sources on Islamic astronomy that heavily depend on these methods. The volume is completed with a detailed index.

The Mathematics of the Heavens and the Earth Glen Van Brummelen, 2021-08-10 The *Mathematics of the Heavens and the Earth* is the first major history in English of the origins and early development of trigonometry. Glen Van Brummelen identifies the earliest known trigonometric precursors in ancient Egypt, Babylon and Greece and he examines the revolutionary discoveries of Hipparchus. The Greek astronomer believed to have been the first to make systematic use of trigonometry in the second century BC while studying the motions of the stars. The book traces trigonometry's development into a full fledged mathematical discipline in India and Islam explores its applications to such areas as geography and seafaring navigation in the European Middle Ages and Renaissance and shows how trigonometry retained its ancient roots at the same time that it became an important part of the foundation of modern mathematics. The *Mathematics of the Heavens and the Earth* looks at the controversies as well including disputes over whether Hipparchus was indeed the father of trigonometry, whether Indian trigonometry is original or derived from the Greeks and the extent to which Western science is indebted to Islamic trigonometry and astronomy. The book also features extended excerpts of translations of original texts and detailed yet accessible explanations of the mathematics in them. No other book on trigonometry offers the historical breadth, analytical depth and coverage of non-Western mathematics that readers will find in *The Mathematics of the Heavens and the Earth*.

The History of Ptolemy's Star Catalogue Gerd Graßhoff, 2013-03-07 Ptolemy's Almagest shares with Euclid's Elements the glory of being the scientific text longest in use From its conception in the second century up to the late Renaissance this work determined astronomy as a science During this time the Almagest was not only a work on astronomy the subject was defined as what is described in the Almagest The cautious emancipation of the late middle ages and the revolutionary creation of the new science in the 16th century are not conceivable without reference to the Almagest This text lifted European astronomy to the high standard of knowledge on which the new science flourished Before the Ptolemaic models of the orbits of the sun the moon and the planets had been refined by Arabic astronomers They provided the structural elements with which Copernicus and Kepler ushered in the era of modern astronomy The Almagest survived the destruction of its epicyclic representation of the planetary orbits in the conceptual traces left behind in the theories of its successors The clear separation of the sidereal from the tropical year the celestial coordinate systems the concepts of time the forms of the constellations and brightness classifications of celestial objects are among many other things still part of the astronomical canon even today

[From Eudoxus to Einstein](#) C. M. Linton, 2004-08-12 Since man first looked towards the heavens a great deal of effort has been put into trying to predict and explain the motions of the sun moon and planets Developments in man's understanding have been closely linked to progress in the mathematical sciences Whole new areas of mathematics such as trigonometry were developed to aid astronomical calculations and on numerous occasions throughout history breakthroughs in astronomy have only been possible because of progress in mathematics This book describes the theories of planetary motion that have been developed through the ages beginning with the homocentric spheres of Eudoxus and ending with Einstein's general theory of relativity It emphasizes the interaction between progress in astronomy and in mathematics showing how the two have been inextricably linked since Babylonian times This valuable text is accessible to a wide audience from amateur astronomers to professional historians of astronomy

Journal for the History of

Astronomy ,1999 A History of Ancient Mathematical Astronomy O. Neugebauer,2012-12-06 From the reviews This monumental work will henceforth be the standard interpretation of ancient mathematical astronomy It is easy to point out its many virtues comprehensiveness and common sense are two of the most important Neugebauer has studied profoundly every relevant text in Akkadian Egyptian Greek and Latin no matter how fragmentary With the combination of mathematical rigor and a sober sense of the true nature of the evidence he has penetrated the astronomical and the historical significance of his material His work has been and will remain the most admired model for those working with mathematical and astronomical texts D Pingree in Bibliotheca Orientalis 1977 a work that is a landmark not only for the history of science but for the history of scholarship HAMA History of Ancient Mathematical Astronomy places the history of ancient Astronomy on a entirely new foundation We shall not soon see its equal N M Swerdlow in Historia Mathematica 1979
