information technologies into a single although not linear narrative Treading the line between philosophy and technical history Robertson draws on his extensive technical knowledge to produce a text which is both thought provoking and accessible to a wide range of readers The book is wide in scope exploring the development of technologies in such diverse areas as cryptography visual art and music and the postal system Through all this it does not simply aim to tell the story of computer developments but to show that those developments rely on a long history of humans creating technologies for increasingly sophisticated methods of manipulating information Through a clear structure and engaging style it brings together a wealth of informative and conceptual explorations into the history of human technologies and avoids assumptions about any prior knowledge on the part of the reader As such the expert and the general reader alike will find it of interest
