*Talking with Computers in Natural Language* Eduard V. Popov, 1986 The growing efficiency and lower prices of computers make it possible to apply them more widely in the economy However the wide use of computers in every day life is hindered by a number of factors which constitute what we shall call the problem of contact or of talking The difficulty is that languages used by computers differ substantially from users languages and are not understood by specialists who are unfamiliar with programming This is why those specialists who use computers need the help of programmers to communicate Since this form of communication has many more or less obvious shortcomings great efforts have been made to find a solution to the problem of contact Two approaches can be distinguished here 1 making the computer language similar to the natural language 2 making the user's language resemble that of computers through formalizing the former This book deals with the first approach We shall consider those systems which make it possible to talk with the user in limited natural language LNL The term natural language NL has been used in the title of this book instead of LNL The reason for not using the term limited natural language is that this term has two meanings 1 a dialect of a natural language 2 a formal language whose operators are expressed by words taken from a natural language e g

Computational Linguistics and Talking Robots Roland Hausser, 2011-08-19 The practical task of building a talking robot requires a theory of how natural language communication works Conversely the best way to computationally verify a theory of natural language communication is to demonstrate its functioning concretely in the form of a talking robot the epitome of human machine communication To build an actual robot requires hardware that provides appropriate recognition and action interfaces and because such hardware is hard to develop the approach in this book is theoretical the author presents an artificial cognitive agent with language as a software system called database semantics DBS Because a theoretical approach does not have to deal with the technical difficulties of hardware engineering there is no reason to simplify the system instead the software components of DBS aim at completeness of function and of data coverage in word form recognition syntactic semantic interpretation and inferencing leaving the procedural implementation of elementary concepts for later In this book the author first examines the universals of natural language and explains the Database Semantics approach Then in Part I he examines the following natural language communication issues using external surfaces the cycle of natural language communication memory structure autonomous control and learning In Part II he analyzes the coding of content according to the aspects semantic relations of structure simultaneous amalgamation of content graph theoretical considerations computing perspective in dialogue and computing perspective in text The book ends with a concluding chapter a bibliography and an index The book will be of value to researchers graduate students and engineers in the areas of artificial intelligence and robotics in particular those who deal with natural language processing MACHINE LEARNING FOR

NATURAL LANGUAGE PROCESSING: INSIGHTS INTO TEXT AND SPEECH ANALYSIS Mr. Harish Reddy Gantla, Dr. Nancy Arya, Dr. Divyanshu Sinha, Dr. Rakhi Mutha, 2024-05-16 The fourth industrial revolution according to the World Economic Forum is about to begin This will blend the physical and digital worlds in ways we couldn't imagine a few years ago Advances in machine learning and AI will help usher in these existing changes Machine learning is transformative which opens up new scenarios that were simply impossible a few years ago Profoundly addressing a significant change in perspective from customary programming improvement models Instead of having to write explicit top down instructions for how software should behave deep learning allows your software to generalize rules of operations Deep learning models empower the engineers to configure characterized by the information without the guidelines to compose Deep learning models are conveyed at scale and creation applications for example car gaming medical services and independent vehicles Deep learning models employ artificial neural networks which are computer architectures comprising multiple layers of interconnected components By avoiding data transmission through these connected units a neural network can learn how to approximate the computations required to transform inputs to outputs Deep learning models require top notch information to prepare a brain organization to carry out a particular errand Contingent upon your expected applications you might have to get thousands to millions of tests This chapter takes you on a journey of AI from where it got originated It does not just involve the evolution of computer science but it involves several fields say biology statistics and probability Let us start its span from biological neurons way back in 1871 Joseph von Gerlach proposed the reticulum theory which asserted that the nervous system is a single continuous network rather than a network of numerous separate cells According to him our human nervous system is a single system and not a network of discrete cells Camillo Golgi was able to examine neural tissues in greater detail than ever before thanks to a chemical reaction he discovered He concluded that the human nervous system was composed of a single cell and reaffirmed his support for the reticular theory In 1888 Santiago Ramon y Cajal used Golgi's method to examine the nervous system and concluded that it is a collection of distinct cells rather than a single cell *Computer-Mediated Communication for Linguistics and Literacy: Technology and Natural Language Education* Bodomo, Adams B., 2009-07-31 This book investigates the way humans communicate through the medium of information technology gadgets focusing on the linguistic literacy and educational aspects of computer mediated communication Provided by publisher AI Talk: A Beginner's Guide to Communicating with Artificial Intelligence M.B.
