Children's Active Transportation Richard Larouche, 2018-06-15 Children's Active Transportation is a rigorous and comprehensive examination of the current research and interventions on active transportation for children and youth As the travel behaviors of these groups tend to be highly routinized and their mobility faces unique constraints such as parental restrictions mandatory school attendance and the inability to drive a motor vehicle before late adolescence this book examines the key factors that influence travel behavior among children and youth providing key insights into lessons learned from current interventions Readers will find a resource that clearly demonstrates how critical it is for children to develop strong active transportation habits that carry into adulthood Discusses the correlates that exist between children's active transportation using a social and ecological model Summarizes active transportation interventions that show what works to increase non motorized modes of travel in children Describes the factors that influence the implementation and effectiveness of interventions

Graphing Transportation Deborah Underwood, 2009 Explains how children can use charts and graphs to organize and study data related to transportation

Climate Change and Global Energy Security Marilyn A. Brown, Benjamin K. Sovacool, 2011-08-12 An exploration of commercially available technologies that can enhance energy security and address climate change and public policy options crucial to their adoption Tackling climate change and improving energy security are two of the twenty first century's greatest challenges In this book Marilyn Brown and Benjamin Sovacool offer detailed assessments of the most advanced commercially available technologies for strengthening global energy security mitigating the effects of climate change and enhancing resilience through adaptation and geo engineering They also evaluate the barriers to the deployment of these technologies and critically review public policy options crucial to their adoption Arguing that society has all the technologies necessary for the task Brown and Sovacool discuss an array of options available today including high efficiency transportation renewable energy carbon sequestration and demand side management They offer eight case studies from around the world that document successful approaches to reducing emissions of greenhouse gases and improving energy security These include the Danish approach to energy policy and wind power Brazil's ethanol program China's improved cookstove program and the U S Toxics Release Inventory Brown and Sovacool argue that meeting the twin challenges of climate change and energy security will allow us to provide energy maintain economic growth and preserve the natural environment without forcing tradeoffs among them

An Introduction to Sustainable Transportation Preston L. Schiller, Jeffrey R. Kenworthy, 2010-08-12 Transportation plays a substantial role in the modern world it provides tremendous benefits to society but it also imposes significant economic social and environmental costs Sustainable transport planning requires integrating environmental social and economic factors in

order to develop optimal solutions to our many pressing issues especially carbon emissions and climate change This essential multi authored work reflects a new sustainable transportation planning paradigm It explores the concepts of sustainable development and sustainable transportation describes practical techniques for comprehensive evaluation provides tools for multi modal transport planning and presents innovative mobility management solutions to transportation problems Students of various disciplines planners policymakers and concerned citizens will find many of its provocative ideas and approaches of considerable value as they engage in the processes of understanding and changing transportation towards greater sustainability This text reflects a fundamental change in transportation decision making It focuses on accessibility rather than mobility emphasizes the need to expand the range of options and impacts considered in analysis and provides practical tools to allow planners policy makers and the general public to determine the best solution to the transportation problems facing a community The book starts by placing transportation within the broader sustainability discussion emphasising a comprehensive approach to sustainability planning and introducing the notion of regenerative transportation In sections on policymaking and planning the book examines how decisions are currently and how they should be made explaining the complex and often misunderstood area of public participation The authors explain demand management as applied to transportation and present lessons from other public arenas and areas of application especially in urban suburban areas The text takes readers through each and every mode of transport beginning with human powered modes and ending in motorized modes including marine and air transport The modes are analyzed separately and in comparison with others according to several criteria Capacity utility functionality considerations infrastructure demands resource consumption land use considerations pollution and costs In ways that non technically trained readers as well as planning students professionals can find useful the book includes guidance on how to optimize transportation systems balancing economic social and environmental objectives while creating just robust and diverse rather than one size fits all solutions The modes are grouped and compared within their respective contexts and there is vital discussion and differentiation between passenger and freight goods transport The final section develops a comprehensive summary of the previous chapters and develops arguments for sustainable transportation policymaking and integrated planning providing international examples and case studies and extracting from them general applications for integrated sustainable transportation Featuring extensive international examples and case studies textboxes graphics recommended reading and end of chapter questions the authors draw on considerable teaching and researching experience to present an essential ground breaking and authoritative text on sustainable transport

Times Square Remade Lynne B. Sagalyn, 2023-10-10 The illuminating evolution of the iconic space of Times Square What is it about Times Square that has inspired such attention for well over a century And how is it that despite its many changes of character the place has maintained a unique hold on our collective imagination In this book which comes twenty years after her widely acclaimed Times Square Roulette Lynne Sagalyn masterfully tells the story of

profound urban change over decades in the symbolic space that is New York City's Times Square. Drawing on the history, sociology, and political economy of the place, *Times Square Remade* examines how the public-private transformation of 42nd Street at Times Square impacted the entertainment district and adjacent neighborhoods, particularly Hell's Kitchen. Sagalyn chronicles the earliest halcyon days of 42nd Street and Times Square as the nexus of speculation and competitive theater building, as well as its darkest days as vice central and on to the years of aggressive government intervention to cleanse West 42nd Street of pornography and crime. Thematically, the author analyzes the three main forces that have shaped and reshaped Times Square: theater, real estate, and pornography, and explains the politics and economics of what got built and what has been restored or preserved. Accompanied by nearly 160 images, more than half in color, *Times Square Remade* is a deftly woven narrative of urban transformation that will appeal as much to the general reader and New York City enthusiast as to urbanists, city planners, architects, urban designers, and policymakers. Urban Transport XIX C. A. Brebbia, 2013-05-01

This book contains the papers presented at the nineteenth annual International Conference on Urban Transport and the Environment. Papers also address the concerns about the safety, security, and efficiency of the systems. Topics covered include: Urban transport planning and Management; Transportation demand analysis; Traffic integration and control; Intelligent transport systems; Transport modelling and simulation; Land use and transport integration; Public transport systems; Environmental and ecological aspects; Air and noise pollution; Safety and security; Energy and transport fuels; Economic and social impact; and Advanced transport systems. *Transportation for Livable Cities* Vukan Vuchic, 2017-09-08

The twenty-first century finds civilization heavily based in cities that have grown into large metropolitan areas. Many of these focal points of human activity face problems of economic inefficiency, environmental deterioration, and an unsatisfactory quality of life—problems that go far in determining whether a city is livable. A large share of these problems stems from the inefficiencies and other impacts of urban transportation systems. The era of projects aimed at maximizing vehicular travel is being replaced by the broader goal of achieving livable cities: economically efficient, socially sound, and environmentally friendly. This book explores the complex relationship between transportation and the character of cities and metropolitan regions. Vukan Vuchic applies his experience in urban transportation systems and policies to present a systematic review of transportation modes and their characteristics. *Transportation for Livable Cities* dispels the myths and emotional advocacies for or against freeways, rail transit, bicycles, and other modes of transportation. The author discusses the consequences of excessive automobile dependence and shows that the most livable cities worldwide have intermodal systems that balance highway and public transit modes while providing for pedestrians, bicyclists, and paratransit. Vuchic defines the policies necessary for achieving livable cities: the effective implementation of integrated intermodal transportation systems. Chinese Economic Journal, 1927 *Chinese Economic*
