

Manufacture and Process Control of TAPPI Size Estimation Charts

Revised 09/10/20

The Size Estimation Charts are manufactured by Printing United Alliance^{*} from an original negative on negative working contact film. The film positive is produced in a NuArc contacting frame with a NuArc light source and built-in light integrator which control the exposure. Each piece of photographic film that is produced during the manufacturing process is evaluated with an X-Rite transmission densitometer for correct exposure by measuring D-Max and dot gain in a 50% screen tint.

****Measurement/Calibration of Dot Sizes**

The .20 dot on each piece of photographic film is measured with a Micro Vu Vertex (model number-311UC, SN-0311UC01508) measurement system. Calibration of the Micro Vu Vertex is performed by HUM Precision Inc. ISO/IEC 17025, AZLA Cal Lab Certificate #1579.01., standard calibration date-09/30/2022 HUM Precision Inc. meets the requirements of ISO/IEC 17025:2005, ANSI/NCSL Z540-1-1994 & MIL Std. 45662A.

Measurement of Dots

The Size Charts are exposed with the same master film negative, insuring repeatability of the image. The 0.20 dot on each chart (photographic contact film) is measured with the Micro Vu Vertex. This is an exacting photographic process, if the 0.20 dot is within specifications, the other dots on chart will be correct having evaluated each piece of film for correct exposure with the X-Rite transmission densitometer during manufacturing.

- ❖ The dots on the chart are correct within an average 10% or 0.005 square millimeters, whichever is the larger.
- ❖ The rectangles are provided for approximate visual comparison and are not measured.

Specification

This chart should be used in conjunction with TAPPI T 564.

Inspection, Length of Use, and Storage

The chart is made from photographic film; the dots are photographic emulsion that can be damaged if abraded. The chart should be visually inspected for physical damage to the measurement dots before each use. The chart should be replaced every 2 years of use. Recommend environmental conditions for the storage and use of the chart: relative humidity 50% +/-10%, temperature 75 degrees +/- 5 degrees F. The film can change size very slightly under extreme temperature and relative humidity conditions. The recommend environmental conditions for the storage are guidelines; the film is dimensionally stable in normal working environments. The charts should be stored in a dustproof package.

^{*} As of May 1, 2020 Printing Industries of America (PIA) merged with Specialty Graphics Imaging Association (SGIA). The combined association became PRINTING United Alliance (PUA) headquartered in Fairfax VA.

^{**} As of 8/1/2018 new measurement process with a Micro Vu Vertex system replacing the previous microscope reticle procedure.

Surface Application of Paper Chemicals J. Brander, I. Thorn, 2012-12-06 With the exception of a slight hiccup during the

height of the recent environmental movement during the early 1990s when for a year or two consumers were prepared to pay a price premium for lower quality recycled paper than for the virgin product the inexorable improvement in the quality demanded of paper products continues This demand for quality covers not only the aesthetics of the product but also its performance Moreover it is becoming increasingly the case that papers designed for a particular use must as it were incidentally also perform well in alternative applications An example is that of office and printing papers which are expected to perform as well in copier machines as in all the various forms of impact and non impact printers But even greater demands are made in other product areas where board designed for dry foods can also be expected to protect moist and fatty materials and be made of 100% recycled fibre The need to isolate foodstuffs from some of the contaminants that can affect recycled board is a serious challenge Thus papermakers are constantly striving to meet a broadening spectrum of demands on their products often while accepting declining quality of raw materials The product design philosophy that has arisen in response to this is increasingly to isolate the bulk of a paper from its uses to engineer the needed performance characteristics into the paper surfaces while more or less ignoring what happens inside
