the Side Door Erin Malone,2024-10-15 The vital story of how women designers and researchers pioneered the field of interaction and user experience design for software and digital interfaces Framed against the backdrop of contemporary waves of feminism and the history of computing design In through the Side Door foregrounds the stories of the women working in the field of computing and the emergent discipline of interaction design as the graphical user interface was developed Erin Malone begins with a handful of pioneers who brought to the field various methods from a variety of backgrounds including design technical communication social psychology ethnography information science and mechanical engineering Moving into the early days of desktop computing the book highlights the women on the teams inventing

contemporary desktop computer interfaces and related tools including those at Xerox PARC Apple's Human Interface Group and Microsoft Malone takes the reader through the invention of the World Wide Web the third wave of feminism and the dot com boom and bust Coming up to contemporary times the book features women working on the web designing equipment interfaces and working in voice UX mobile design and civic design and continues with the up and coming leaders driving social impact changing human centered design and research and working to be accountable for the harms of contemporary software products Along the way the author also touches on the challenges and biases women have faced in the workplace and continue to encounter despite cultural and sociological advancements

Parallel Computing and Mathematical Optimization Manfred Grauer, Dieter B. Pressmar, 2012-12-06 This special volume contains the Proceedings of a Workshop on Parallel Algorithms and Transputers for Optimization which was held at the University of Siegen on November 9 1990 The purpose of the Workshop was to bring together those doing research on 2 lgorithms for parallel and distributed optimization and those representatives from industry and business who have an increasing demand for computing power and who may be the potential users of nonsequential approaches In contrast to many other conferences especially North American on parallel processing and supercomputers the main focus of the contributions and discussion was problem oriented This view reflects the following philosophy How can the existing computing infrastructure PC's workstations local area networks of an institution or a company be used for parallel and or distributed problem solution in optimization This volume of the LECfURE NOTES ON ECONOMICS AND MA THEMA TICAL SYSTEMS contains most of the papers presented at the workshop plus some additional invited papers covering other important topics related to this workshop The papers appear here grouped according to four general areas 1 Solution of optimization problems using massive parallel systems data parallelism The authors of these papers are Lootsma Gehne II Solution of optimization problems using coarse grained parallel approaches on multiprocessor systems control parallelism The authors of these papers are Bierwirth Mattfeld and Stoppler Schwartz Boden Gehne and Grauer and Taudes and Netousek

Office Automation D. Tschritzis, 2012-12-06 The term Office Automation implies much and means little The word Office is usually reserved for units in an organization that have a rather general function They are supposed to support different activities but it is notoriously difficult to determine what an office is supposed to do Automation in this loose context may mean many different things At one extreme it is nothing more than giving people better tools than typewriters and telephones with which to do their work more efficiently and effectively At the opposite extreme it implies the replacement of people by machines which perform office procedures automatically In this book we will take the approach that Office Automation is much more than just better tools but falls significantly short of replacing every person in an office It may reduce the need for clerks it may take over some secretarial functions and it may lessen the dependence of principals on support personnel Office Automation will change the office environment It will eliminate the more mundane and well understood functions and will highlight the decision oriented activities in an office The

goal of this book is to provide some understanding of office activities and to evaluate the potential of Office Information Systems for office procedure automation To achieve this goal we need to explore concepts elaborate on techniques and outline tools

New Trends in Computer Graphics Nadia Magnenat-Thalmann, Daniel Thalmann, 2012-12-06 New Trends in Computer Graphics contains a selection of research papers submitted to Computer Graphics International 88 COL 88 COL 88 is the Official Annual Conference of the Computer Graphics Society Since 1982 this conference has been held in Tokyo This year it is taking place in Geneva Switzerland In 1989 it will be held in Leeds U K in 1990 in Singapore in 1991 in U S A and in 1992 in Montreal Canada Over 100 papers were submitted to CGI 88 and 61 papers were selected by the International Program Committee Papers have been grouped into 6 chapters The first chapter is dedicated to Computer Animation because it deals with all topics presented in the other chapters Several animation systems are described as well as specific subjects like 3D character animation quaternions and splines The second chapter is dedicated to papers on Image Synthesis 11 particular new shading models and new algorithms for ray tracing are presented Chapter 3 presents several algorithms for geometric modeling and new techniques for the creation and manipulation of curves surfaces and solids and their applications to CAD In Chapter 4 an important topic is presented the specification of graphics systems and images using languages and user interfaces The last two chapters are devoted to applications in sciences medicine engineering art and business

Making Use John M. Carroll, 2003-01-01 John Carroll shows how a pervasive but underused element of design practice the scenario can transform information systems design Difficult to learn and awkward to use today's information systems often change our activities in ways that we do not need or want The problem lies in the software development process In this book John Carroll shows how a pervasive but underused element of design practice the scenario can transform information systems design Traditional textbook approaches manage the complexity of the design process via abstraction treating design problems as if they were composites of puzzles Scenario based design uses concretization A scenario is a concrete story about use For example A person turned on a computer the screen displayed a button labeled Start the person used the mouse to select the button Scenarios are a vocabulary for coordinating the central tasks of system development understanding people's needs envisioning new activities

and technologies designing effective systems and software and drawing general lessons from systems as they are developed and used Instead of designing software by listing requirements functions and code modules the designer focuses first on the activities that need to be supported and then allows descriptions of those activities to drive everything else In addition to a comprehensive discussion of the principles of scenario based design the book includes in depth examples of its application

Visualization in Human-Computer Interaction Peter Gorny, 1990 This volume presents a selection of the contributions to the Seventh Workshop on Informatics and Psychology The theme of the workshop was Visualization in Human Computer Interaction Visualization is nowadays recognized as an important aspect of user oriented human computer interfaces Both informatics and psychology are concerned with this topic In informatics the technology is being developed which makes visualization and interaction based on visual concepts feasible Another important trend in informatics is the development of prototypical solutions Visual programming visual languages graphical interfaces visual representations and many other keywords characterize current efforts in this field Psychologists are working on the question of how people represent knowledge visually and how they can take advantage of visual representations when solving tasks

Expert Systems for Software Engineers and Managers S. David Hu, 2013-03-08 This book is written for software engineers software project leaders and software managers who would like to introduce a new advanced software technology expert systems into their product Expert system technology brings into programming a new dimension in which rule of thumb or heuristic expert knowledge is encoded in the program In contrast to conventional procedural languages e g Fortran or C expert systems employ high level programming languages Le expert system shells that enable us to capture the judgmental knowledge of experts such as geologists doctors lawyers bankers or insurance underwriters Past expert systems have been more successfully applied in the problem areas of analysis and synthesis where the boundary of knowledge is well defined and where experts are available and can be identified Early successful applications include diagnosis systems such as MYCIN geological systems such as PROSPECTOR or design configuration systems such as XC ON These early expert systems were mainly applicable to scientific and engineering problems which are not theoretically well understood in terms of decisionmaking processes by their experts and which therefore require judgmental assessment The more recent expert systems are being applied to sophisticated synthesis problems that involve a large number of choices such as how the

elements are to be compared. These problems normally entailed a large search space and slower speed for the expert systems designed. Examples of these systems include factory scheduling applications such as ISIS or legal reasoning applications such as TAXMAN.

Advances in Computer Graphics IV W.T. Hewitt, Michel Grave, Michel Roch, 2012-12-06 This fourth volume of *Advances in Computer Graphics* gathers together a selection of the tutorials presented at the EUROGRAPHICS annual conference in Nice France September 1988. The six contributions cover various disciplines in Computer Graphics giving either an in depth view of a specific topic or an updated overview of a large area. Chapter 1 Object oriented Computer Graphics introduces the concepts of object oriented programming and shows how they can be applied in different fields of Computer Graphics such as modelling animation and user interface design. Finally it provides an extensive bibliography for those who want to know more about this fast growing subject. Chapter 2 Projective Geometry and Computer Graphics is a detailed presentation of the mathematics of projective geometry which serves as the mathematical background for all graphic packages including GKS, GKS 3D and PHIGS. This useful paper gives in a single document information formerly scattered throughout the literature and can be used as a reference for those who have to implement graphics and CAD systems. Chapter 3 GKS 3D and PHIGS Theory and Practice describes both standards for 3D graphics and shows how each of them is better adapted in different typical applications. It provides answers to those who have to choose a basic 3D graphics library for their developments or to people who have to define their future policy for graphics.
